

TWIN TIP CONNECTOR KIT

INSTALLATION INSTRUCTIONS

1. Remove the existing tail clips from your skins. The clip is a tight fit over the widest section of the strap. Pull the strap left and right to work it through the narrow opening - do not be afraid to pull hard!
2. To install the new Twin Tip Connector, thread the strap through the connector as shown. Pull the strap left and right to feed it through the narrow slots.
3. Install the skin onto the ski and set the clip position on the strap so that the strap is slightly stretched when the clip is installed on the tail of the ski.
 - too much stretch will make the clip difficult to install and remove from the ski
 - too little stretch may result in the clip becoming detached during skinning
