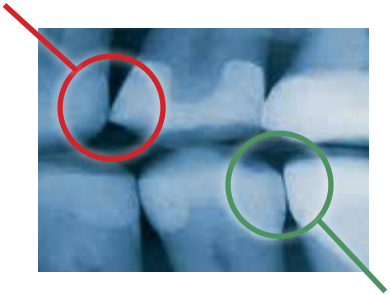
Only a sectional matrix can deliver results like this!

Tofflemire-style System

- Fails to restore proximal anatomy
- Thin contact at the marginal ridge
- Large food trap below
- Increased likelihood of fracture, occlusal interference, recurrent caries and periodontal disease



Composi-Tight® 3D Fusion™ Sectional Matrix System

- ✓ Operator-friendly retaining system
- ✓ Naturally contoured bands
- ✓ Anatomically correct contacts
- ✓ Contacts at the height of contour
- ✓ Rings produce optimal tooth separation for excellent, tight contacts

Only Composi-Tight® 3D Fusion™ can make the technique this intuitive and frustration free!

Place the matrix band:
Dead-soft three dimensionally contoured matrices have placement tabs for easier occlusal placement and Garrison's revolutionary non-stick coating for hassle-free removal.

Wedge firmly:
Composi-Tight® 3D Fusion™ Ultra-Adaptive wedges glide in but won't back out. Their soft, flexible exterior readily adapts to interproximal irregularities for a superior gingival seal.

Place the ring:
All three Composi-Tight® 3D Fusion™ separator rings will fit right over the wedge for easier placement. With Ultra-Grip™ retention extensions, they will stay firmly in place from the distal of the canine to the widest of molar preparations.

Composi-Tight® 3D Fusion™ Cases

Great adaptation to the teeth eliminates the need for adjustment with polishers in the proximal areas.

The Award Winning Composi-Tight® 3D Fusion™ Sectional Matrix System

TESTIMONIAL

"3D rings are the real topic of Garrison's systems. The "v" shape of the ring that fits in the interproximal area allows a good fitting between the cavity margins and the matrix in the buccal and palatal walls. This results in an easier positioning of the composite masses close to the cavity margins and also the final remodeling usually necessary at the time of removal of the matrix will be very minimal. The rings also permit a divergence of the interproximal dental elements, and this causes a great point of contact. Garrison systems make Class II restorations simpler and more predictable and also reduce the operating time of the finishes when the matrix is taken off."

Enrico Cogo, DDS
Legnago, Ferrara, and Goito, Italy

Composi-Tight® 3D Fusion™

More than 25 years of sectional matrix leadership and an incredible amount of feedback from users all over the globe were poured into the design. All this hard work has resulted in separator rings with significantly improved performance and ease of use.

Tight contacts – guaranteed!
Superior tooth separation force through advanced engineering and material selection guarantees perfect contacts every time.

Simplified technique!
Composi-Tight® 3D Fusion™ is packed with features like easy ring stacking, over-the-wedge placement and Ultra-Grip™ anti-ring slip extensions that make system use intuitive and frustration free.

Ideal anatomy!
Soft-Face™ silicone ring tips with enhanced marginal ridge anatomy hug the pre-contoured dead-soft matrices to the tooth for flash free, perfectly contoured restorations.

Wider indications, wider smiles!

Dentistry's first Wide Preparation separator ring (green) makes Composi-Tight® 3D Fusion™ the most versatile and user-friendly sectional matrix system available. The Wide Prep ring greatly simplifies what until now has been one of the most challenging posterior composite restorations. Now you can restore these big preps with confidence knowing that you will achieve excellent contact and contour without having to take extra steps.

Case using the Fusion™ Anterior Matrix System

Dr. JD Corey, DDS, Muskegon, Michigan

Figure 1. Flexible matrix systems have a tendency to deform subgingivally. This can lead to non-hygienic restorations and decay on adjacent teeth (as demonstrated in this pre-operative radiograph).

Figure 2. Rubber dam is in place and teeth have been pumiced before removal of the decay.

Figure 3. Decay has been removed, the preparations have been refined, treated with gluma, etched, and bonded. These steps were completed before placing the matrix bands and wedge to ensure proper coverage of the restorative materials to the preparations.

Figure 4. Stacked matrix bands have been placed to provide facial access and are ready to be engaged by the wedge.

Figure 5. Completed restoration after removal of the rubber dam.

Figure 6. A post-operative radiograph showing a broadened interproximal contact, improved emergence profile, and appropriate marginal integrity of the restorations.

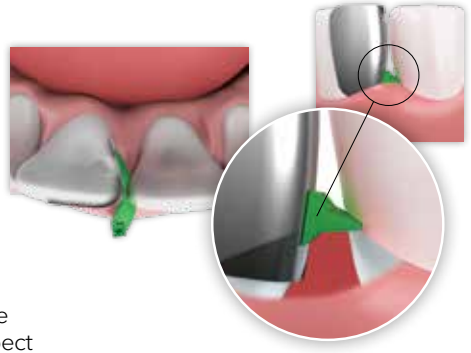
Fusion™ Anterior Matrix System



The **Fusion™ Anterior Matrix System** from Garrison® gives you the materials and techniques to restore many types of anterior lesions with confidence.

For years, our customers have shown us how they use posterior metal matrices to restore anterior teeth. When placed vertically, what was the buccal-lingual curvature of the band creates ideal gingival-incisal curvature for an anterior tooth. We worked with these customers to design a metal matrix band that takes this technique to a whole new level of refinement.

Add to that the intelligent design of the new **Fusion™ Anterior Wedges** and you get a complete system. These radically curved wedges hug the bands to the tooth all the way from the facial aspect around to the lingual, helping to free up your hands. Composite placement and sculpting are simplified, allowing you to easily express your artistic nature restoring beautiful smiles for your patients.

ANK01 Contains:
50 short bands
50 tall bands
25 extra small wedges
25 small wedges
25 medium wedges
25 large wedges

Case using Composi-Tight® 3D Fusion™ Firm Matrix Bands

Dr. Anand Narvekar (Mumbai, India) utilized Garrison® Composi-Tight® 3D Fusion™ Firm Bands for deep margin elevation in this challenging onlay case.

Figure 1.
FXH300 large molar band with extension was placed. The wedge was wrapped with multiple layers of teflon tape to sufficiently increase its size to allow it to seal the cervical portion of the matrix band in this extremely wide interproximal space.

Figure 2.
Cervical area was built up with multiple layers of composite.

Figure 3.
The process was repeated for the adjacent molar. The stiff nature of Composi-Tight® 3D Fusion™ Firm Bands allows apical pressure to be applied to the band without deformation of the matrix. It can be seated deeper than dead soft matrices for these types of procedures.

Figure 4.
One-week post-bonding of onlays.

To see more cases, go to the Learning Center at garrisondental.com/learning

Composi-Tight® 3D Fusion™ Firm Matrix Bands

Composi-Tight® 3D Fusion™ Firm matrix bands with **eZ-Place™** technology maintain their shape during placement making them ***significantly easier*** to insert!

eZ-Place™ technology combines specially processed stainless steel with a proprietary matrix band forming process to yield Fusion Firm's remarkable handling characteristics. They resist deformation nearly 70% better than typical dead-soft bands yet are pre-contoured and super thin at 0.0015".

Fusion Firm:
- Nearly 70% better at resisting deformation!
- Super-thin at only 0.0015"
- Five ideal sizes!

Perfect for:
- Tight interproximal spaces!
- More conservative preps!
- First-time users and veterans alike!

Composi-Tight® 3D Fusion™

Ultra Adaptive Wedges

Combining Soft-Face™ adaptive materials, a firm inner core and advanced mechanical features to produce a wedge that truly works. Every time.

Fins with serious function
Soft retentive fins smoothly fold down during wedge insertion and then spring back when clear of the interproximal space. Wedge back-out is a thing of the past.

A real softie Composi-Tight® 3D Fusion's Soft-Face™ over-mold allows the wedge to do what no other wedge can truly do – actually adapt to interproximal irregularities.

Tough on the inside
The firm inner skeleton allows for easy insertion and tooth separation just like a traditional wedge.

FenderWedge®
Interproximal Tooth Shields

Pre-separate and Protect

FenderWedge® prevents damage to the adjacent tooth and gingiva that can occur during Class II preparations.

FenderWedge® is a combination of a steel plate and a plastic wedge. Inserted into the interproximal space, it protects the tissue and separates the teeth, thus simplifying the application of a matrix.

Large (yellow) TSYL

Medium (green) TSGR

Small (orange) TSOR

X-small (purple) TSPR

FenderWedge®

Large Yellow	TSYL-M	30	TSYL	60

FenderWedge is NOT a sectional matrix system nor does it replace the use of a matrix band.

Clinical Tip

figure 1

figure 2

figure 3

Place FenderWedge® prior to preparation to pre-separate and protect the adjacent teeth.

The plastic wedge—not just the metal shield—should firmly engage the interproximal surfaces of the teeth. This will provide the optimum pre-separation force and hold the FenderWedge® securely in place. (Figures 1 and 2)

Figure 3 clearly shows marks from the bur along the shield. Much better to have those on the shield than on the adjacent tooth!

Once the preparation is complete, remove the FenderWedge® and place your matrix.

Dentistry and photos courtesy of Dr. Rob Ritter, Jupiter, Florida

IPR Management in Clear Aligners Therapy

Dr. Tommaso Weinstein, DDS, PhD

Interproximal space management is a very important issue in clear aligners therapy. This case presented crowding in upper and lower arches. It was treated with clear aligner therapy through a digital planification.

The interproximal reduction (IPR) was carefully planned. The multiple thicknesses of FitStrip™ allowed IPR to be performed with predictability and control. The patient reported excellent comfort during the procedure, better than what was reported with traditional strips.

Fig 1, 2 and 3. Initial situation, upper and lower arch.

Fig 4–7. Digital planification, before (4 and 5) and after (6 and 7). Numbers refer to IPR required

Fig 8. Use of FitStrip™ for IPR.

Fig 9. Clear aligners in place. **Fig 10 and 11.** Direct composites on incisal edges.

Fig 12 and 13. Final result in upper and lower arch.

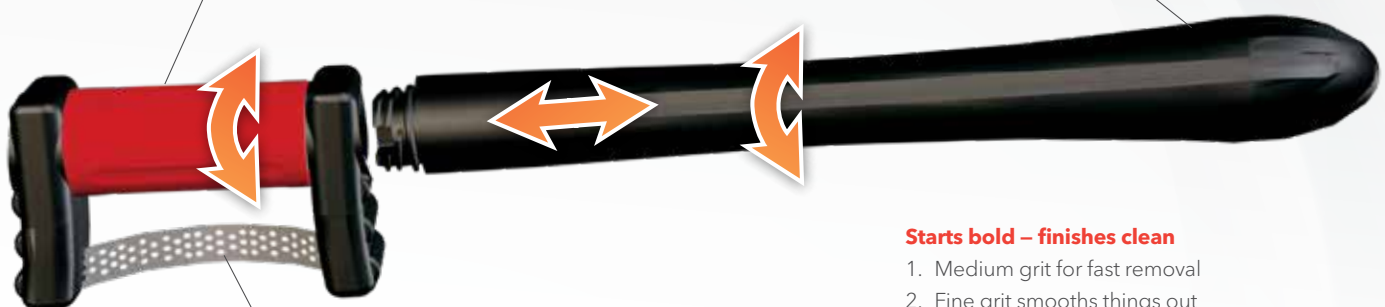
FitStrip™

Flexible
I nterproximal finishers with a
Twist

FitStrips are a complete line of interproximal trimmers and finishers from the company that invented tight interproximal contacts, **Garrison® Dental Solutions.**

Do the Twist! Twist the color-coded barrel to adjust FitStrips' curvature and it's automatically locked in place.

One handy handle! FitStrip's simple, attachable handle makes a world of difference for both clinician ease-of-use and patient comfort.



Ready for a marathon! FitStrips are very durable and long lasting. They stay sharp and ready to go even after multiple autoclave cycles.

Starts bold – finishes clean

1. Medium grit for fast removal
2. Fine grit smooths things out
3. Super fine strips put the perfect finishing touch on things

FitStrip™

Flexible
I nterproximal finishers with a
Twist

The FitStrip™ kit that started it all!

- Primary Function: Contouring Composites and IPR up to .30mm.
- Durable diamond abrasive on just one side to protect adjacent teeth
- The FitStrip™ serrated saw is the PERFECT instrument to separate accidentally bonded teeth and reduce over-tight contacts

FitStrip™ Starter Kit

FPSK01 contains:, 2 handles, 2 serrated, 4 single sided (1 of each .08 mm, .10 mm, .13 mm, .18 mm)

4 double sided (1 of each .11 mm, .15 mm, .21 mm, .30 mm)

Most popular!

Your Complete Solution for Interproximal Reduction (IPR)!

- Primary Function: IPR when .40mm and .50mm are needed, yet can still be used to contour composites
- IPR gauges for exact reduction
- Attachable handle for greater ease of use and patient comfort

Universal Kit

FPSK04 contains:, 2 handles, 1 IPR gauge, 4 single sided (1 of each .08 mm, .10 mm, .13 mm, .18 mm)

6 double sided (1 of each .11 mm, .15 mm, .21 mm, .30 mm, .40 mm, .50 mm)

Subgingival FitStrips are the ideal solution for the cervical area!

- Primary Function: Use with Composites, both for contouring and accessing cervical areas to remove overhangs or excess cements.
- Only 2.5mm height keeps abrasive below the contact point
- Safety zone protects contacts during insertion
- Extra thin at .05mm

FitStrip™ Subgingival Finishing and Single Sided Kit

FPSK08 contains:, 2 handles, 10 Strips: 2 subgingival super fine, 2 subgingival fine, 1 subgingival medium, 1 serrated saw, 1 each single sided .08 mm, .10 mm, .13 mm, .18 mm

FitStrip™

FitStrips – a complete line of interproximal trimmers and finishers from the company that invented tight interproximal contacts, **Garrison Dental Solutions.**

Kits All kits come in a package of 10 FitStrips with 2 handles.

Description/Contents	Item	Primary Use
Starter Kit for finishing/polishing 2 serrated 4 single sided (1 of each .08 mm, .10 mm, .13 mm, .18 mm) 4 double sided (1 of each .11 mm, .15 mm, .21 mm, .30 mm)	FPSK01 (shown on page 20)	Finishing composites
Universal Kit for IPR and finishing/polishing 1 IPR gauge 4 single sided (1 of each .08 mm, .10 mm, .13 mm, .18 mm) 6 double sided (1 of each .11 mm, .15 mm, .21 mm, .30 mm, .40 mm, .50 mm)	FPSK04 (shown on page 20)	Finishing composites and IPR
IPR Kit 1 IPR gauge 10 double sided (2 of each .11 mm, .21 mm, .30 mm, .40 mm, .50 mm)	FPSK05	IPR
Subgingival Finishing Kit 3 subgingival super fine, 3 subgingival fine, 3 subgingival medium, 1 serrated saw	FPSK07	Subgingival
Subgingival Finishing and Single Sided Kit 2 subgingival super fine, 2 subgingival fine, 1 subgingival medium, 1 serrated saw, 4 single sided (1 of each .08 mm, .10 mm, .13 mm, .18 mm)	FPSK08 (shown on page 20)	Subgingival and finishing composites

Rally™

Mini Polishers for Composite

Rally gets you to the finish line faster!

The composite finish line that is. One lightning fast step will put a beautiful satin finish on posterior restorations or add the gray high shine polisher for a lustrous gloss on facials and anteriors. And if you want to be quick off the starting line, use the blue coarse grit for rapid reduction and shaping. Rally Mini Polishers get you across the finish line and on to your next patient in record time!

Get to the point – Every time!

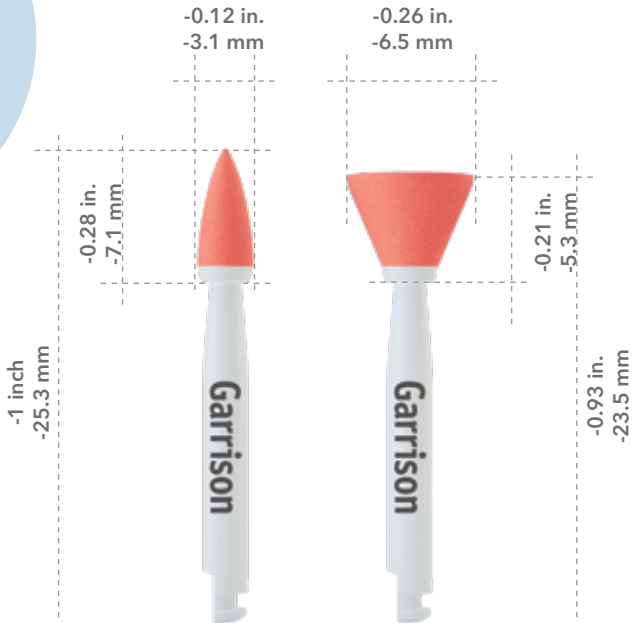
Single patient Rally means that you get a clean, fresh, properly shaped polisher every time.

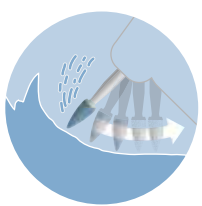
Mini and mighty!

Rally's small size and tapered shaft create a truly agile polisher capable of reaching the smallest anatomical features without blocking your visibility.

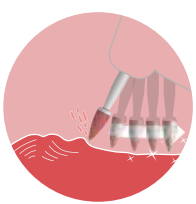
A clean get-a-way!

You don't want to leave a trail of crumbs or spattered polishing paste on the track. Rally's diamond impregnated high shine final polishers won't crumble during use and don't require paste to create a beautiful, durable shine.

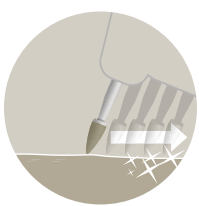




Remove – Choose the Blue (silicon carbide)
Polishers for fast removal and contouring



Smooth – Choose the Red (aluminum oxide)
Polishers for smoothing and silky shine



Shine – Choose the Gray (diamond impregnated)
Polishers for ultra high shine

Slow speed right angle latch shank. Use with water.

Rally™

eZr™

Intra-oral Adjustment/Polishing
for Zirconia and Lithium Disilicate

Adjust and Polish Zirconia and Lithium Disilicate the eZr™ Way!

eZr™ Intra-oral **Adjustment:**

- **No chatter, chipping or microfracture –** Unlike diamonds bonded directly to a hard metal shaft, eZr's rubber substrate cushions the diamonds to prevent damage to the restoration.
- **No heat build-up –** The carefully engineered substrate does not transfer heat during use.
- **FAST! –** eZr's coarse grit blue grinders make your adjustments fast and convenient.

eZr™ Intra-oral **Polishing:**

- **Unparalleled smooth polish –** Don't take our word for it! – "The eZr system is the only one I've tried that polishes zirconia to smooth!" Todd Brower, DDS, Holland, Michigan.
- **Increased physical stability –** Highly polished zirconia and lithium disilicate is stable and non-abrasive to opposing dentition.
- **No paste required –** Forget the mess and expense of polishing pastes. eZr™ is all you need.
- **No water required –** No need to use water when polishing. Water is only required for high speed.

1 Start by gross adjusting and contouring using the blue coarse grit grinders. Use the flat end taper for occlusal/labial/lingual/buccal surfaces and the disc for interproximal surfaces.

2 Use the green medium grit polishers for smoothing and pre-polishing. Use the point for the occlusal grooves, the cup for labial/lingual/buccal, and the disc for interproximal surfaces.

3 Use the orange fine grit polishers for high gloss polishing. Use the point for the occlusal grooves, the cup for labial/lingual/buccal, and the disc for interproximal surfaces.

Beautiful results!

Case using a technique known as Deep Margin Elevation (DME) or cervical margin relocation that has been evolving since at least the 1990s

Dr. Robert Rosenfeld (Westwood, New Jersey) case utilizing the Garrison® Reel Matrix™ margin elevation band.

Figure 1. Removal of the amalgam and excavation revealed that the decay extended quite far subgingivally on both the mesial and distal.

Figure 2. After placing a self etching primer and adhesive, I applied several small increments of a bulk fill flowable material, enough to rise above the gingiva.

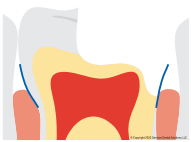
Figure 3. I then did a freehand layered buildup of the remainder of the restoration, with the exception of the mesial box, using a light-cured core buildup material.

Figures 4 and 5. At this point, I removed the Margin Elevation band and placed a sectional matrix band, wedge and separating ring on the mesial (Composi-Tight® 3D Fusion™, Garrison® Dental) and completed the buildup to create good contour and contact until such time that the tooth is prepared for a crown.

Figure 6. After trimming the slight excess material on the distal with a finishing carbide and adjusting the occlusion, here is the finished restoration.

Introducing > *The NEW Deep Margin Elevation Kit*

Predictably relocate deep margins for better final restorations. The conservative deep margin elevation procedure allows for the maximum conservation of natural tooth structure while helping to avoid more invasive procedures such as crown lengthening. Relocated supragingival margins facilitate easier scanning/impressions and proper isolation for improved bonding of inlays, onlays and direct final restorations.

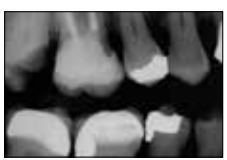


Reel Tight: Extra-narrow enhanced conical design slides subgingivally to properly seal deep margins.

Reel Easy: Lightweight retainerless delivery system makes placement and tightening simple.

Reel Fast: Pre-loaded reels and removable application handle mean rapid deployment and maximum access.

Clinical Case: The margin elevation technique allows proper isolation and elevation of deep margin areas prior to restoring with an indirect partial coverage restoration (inlay or onlay). The use of the Garrison® Reel Matrix™ margin elevation band allows proper adaptation and seal of these deep areas so that a composite margin elevation can be performed.



Pre-op X-ray shows the margin location for #17 subgingivally prior to elevation.

Seat the margin elevation band subgingivally. The narrowness of the matrix will allow it to slide subgingivally and seal the margin efficiently.

Seal the dentin and elevate the deep margin with restorative composite.

Remove the matrix and finish with a #12 blade to remove any flash. The deep margin has been relocated 1–2 mm supragingival for predictable isolation and delivery of an indirect bonded restoration.

Post-op X-ray shows the completed margin elevation prior to final restoration being completed.

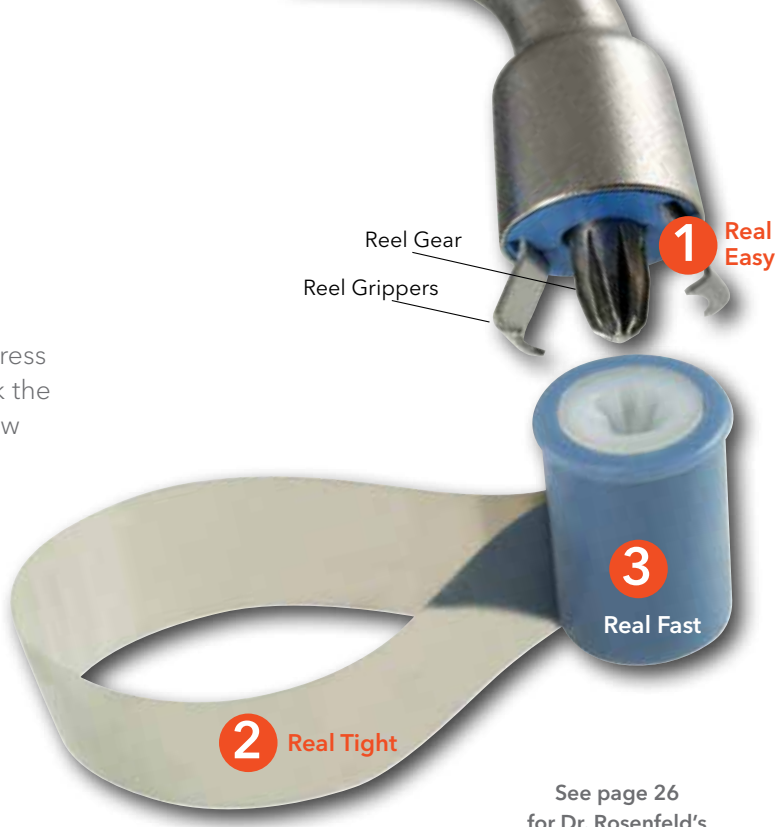
ReelMatrix

Real Easy. Real Tight. Real Fast!

For all posterior restorations!



1 Real Easy:
The reels pop into the handle without any fuss! Press the reel into the handle and retract the grippers to lock the reel in place. Plus, if you use the regular matrices (yellow hubs) they can be easily pushed through contacts.

2 Real Tight:
Tight contacts and excellent contour are what Reel Matrix is all about. These thin matrices are pre-contoured in three dimensions and when combined with anatomical wedges and separator rings, the result is amazingly tight contacts at the natural height of contour.

3 Real Fast:
Pre-loaded reels mean you can just lock them in and go. The retainerless design greatly speeds up quadrant work while improving visibility and patient comfort. Add a FX500 separator ring and you virtually eliminate buccal and lingual flash.

See page 26 for Dr. Rosenfeld's Margin Elevation case.

SlickBands™ Tofflemire-style

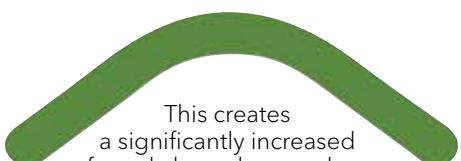
Non-stick technology developed by Garrison®: Modern bonding agents can adhere to uncoated matrix bands—Slick Bands™ slide right out.

For when a sectional just won't work!

Exclusive Garrison® shapes!

Proprietary Right Curve™ design.

The increased curvature of the all-new **Right Curve™ matrix band** produces outstanding gingival seal and reaches over to adjacent teeth easier for broader, deeper contacts.



This creates a significantly increased funnel-shaped cone when wrapped around a tooth. It's the right choice for many restorations.

Margin Elevation Band

The deep margin elevation technique is a useful non-surgical approach to treating deep localized margins.

A margin elevation matrix will give you the best gingival adaptation and contour for the deep margin areas. It is trimmed in height to allow improved adaptation to deep margin areas.

Slick Bands™ Tofflemire-style Matrices

Clinical Tip: Use dead-soft green bands when contact is COMPLETELY broken with adjacent teeth for maximum burnishability. When contact is NOT broken with adjacent teeth, use regular gray bands.

VariStrip™

How can you produce a natural curvature for anterior composites and eliminate black triangles? Check out Garrison's curved "Varistrips" to recreate the natural interproximal anatomy for anterior teeth.

- Helps avoid incorrect flat embrasures, black triangles and food traps that can be caused by old-fashioned straight mylars.
- No need for wedges on subgingival fillings, as the contours naturally close off the apical aspects for you.
- Excellent for class IVs, diastema closures, etc.
- Variable height allows you to slide each strip in until it precisely matches the tooth height before cutting off excess.
- The blue tint does not affect cure, but ends the annoyance of losing clear strips on patient bibs or bracket tables.

Blue View VariStrips—a must-have super-simple product for every dental office.

Dr. Michael Curtis, Bridgeport, CT, USA

Clinical Tip

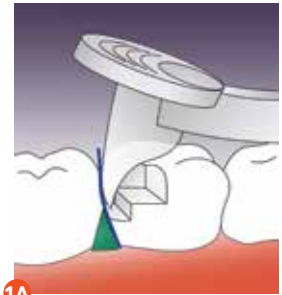
After using your preferred bonding procedure, place the restorative material into the preparation in advance of using the cervical matrix.

Place the cervical edge of the matrix against the tooth (Fig. 1).

While pressing the gingival edge of the matrix firmly against the tooth, roll the matrix onto the tooth (Fig. 2). Excess material will be expressed from the occlusal edge of the matrix rather than subgingivally, greatly simplifying clean up.

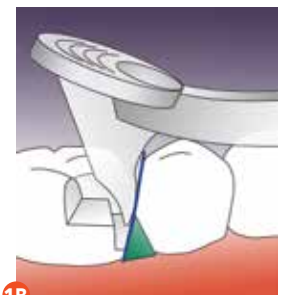
Cure directly through the matrix.

How **PerForm™** works:



1A

STEP 1: Place the first composite increment. Press PerForm™ into the uncured composite increment and either push (distal; fig. 1A) or pull (mesial; fig. 1B).



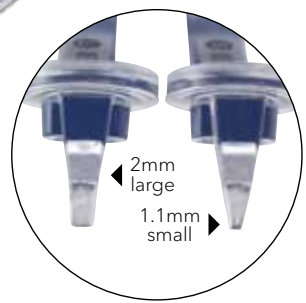
1B

2

STEP 2: Place the curing light directly on the Fresnel lens and cure.

PerForm
Proximal Contact
Instruments

PerForm puts you in control.



- Improves contacts with any matrix system
- Control the height and breadth of contacts
- Increase the tightness of contacts
- Unique lens controls curing light diffusion
- Steam autoclave only

"To ensure a tight contact a bulk fill flowable was placed in one proximal box at a time and the mylar held against the adjacent tooth with a PerForm™ proximal contact instrument.

This ensures that the contact is tight and well-formed while light curing through it."

Dr. Jack D. Griffin, Jr., DMD, MAGD
Weldon Spring, MO

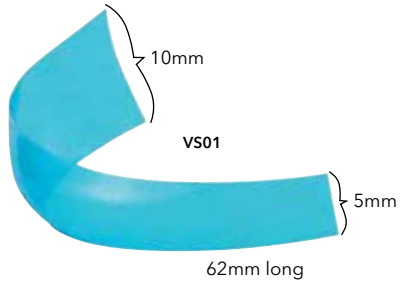
Our Most Popular Anterior Matrix

BlueView™ VariStrip™

Contoured Anterior Matrices



The Blue View™ VariStrip™ is a revolutionary contoured anterior matrix providing the optimum curvature and band height for virtually every anterior restoration. The 0.0020" thin plastic anatomical strip is tapered from one end to the other. You can place the strip interproximally and then slide it until the tooth height is perfectly matched. The pre-contouring easily recreates the occluso-gingival anatomy, avoiding flat embrasures.

Curved Form/tapered: Provides the optimum curvature and band height for virtually every anterior restoration.

Blue Tint: Provides contrast between matrix and tooth structure without compromising composite polymerization.

BlueView™

Cervical Matrices

"I love the Blue View Cervical Matrix! It works so well. My assistants love watching me use this system. The patients love the excitement in our faces. It makes the process easy and fast. Gotta love that! We are also hooked on using the ReelMatrix. Thanks so much for making great products."

Cynthia Brattesani, DDS,
San Francisco, CA, USA

KCMK2 INCLUDES

240 Assorted Matrices
1 Matrix placement Instrument

MATRICES INCLUDED:

Anterior/Premolar
KCMA60 – 50 pcs

Molar
KCMA70 – 50 pcs

KCMA10 – 35 pcs
KCMA20 – 35 pcs
KCMA30 – 35 pcs
KCMA40 – 35 pcs

Flexible

- adapts to individual anatomy for improved contours
- use it to directly compact the composite into the restoration
- thin edges allow excess composite to flow out for improved anatomy

Convenient!

- protects the restoration from contamination
- eliminates time spent hand sculpting
- eliminates air-inhibited layer
- reduces finishing time
- 6 sizes for a perfect fit

Blue Tint

- provides contrast between matrix and tooth structure
- does not compromise composite polymerization

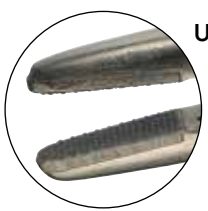
Composi-Tight® Matrix Forceps

Precise Placement, Unbeatable Grip.

Check out the GRIP!
Effortlessly remove the matrix bands that otherwise would be a struggle.

Precise Placement: The tips have a 75-degree angle with an occlusal-gingival orientation, providing a more appropriate placement angle than cotton forceps. The petite, carbide tips allow the matrix to be grasped at its upper edge to prevent distortion of the interproximal area of the band.



Unbeatable Grip: The tungsten carbide tips provide exceptional grip and tactile control for tough access cases.

Matrix Forceps

BFA-1	Angled tip for occlusal placement

Composi-Tight® 3D Fusion™

The extra-heavy duty Garrison Premier Ring Forceps have been significantly improved for 2023. A 60% increase to the contra angle makes posterior ring placement easier. More significantly, the forceps tips now feature two ring guides: One that holds the ring securely for traditional placement with the loop towards the anterior and new second ring guide that allows for reverse ring placement! Reverse, or 'Butterfly' ring placement will remove the loop of the ring from your working field providing you the maximum space to sculpt beautiful composite restorations.

- Extra durable
- Designed for all hand sizes and hand strengths
- Improved placement angle
- Traditional or butterfly ring placement

Garrison® Premium/Premier Ring Forceps – Improved!

CompositeInstruments

Nonstick titanium-nitride coated

Our multi-function instruments have double condenser configurations and carving blades on opposite ends. Now you can place, pack, shape and carve your way to perfectly contoured composite restorations without ever having to switch instruments!

- Large-diameter, lightweight handles for improved ergonomics.
- Provides non-stick surface for placement and shaping of composites.
- 40% smoother than stainless steel for a non-porous, non-stick surface.
- Withstands diverse cleaning/sterilization methods, including ultrasonic cleaning.

Matrix Selection Guide

Being the Matrix Company, one of the most common questions we get is "which matrix do I use where?"
While personal preference will drive much of the decision process, below is a chart that can provide a good starting point.

Procedure	Recommended Materials	Page	Special Notes
Distal of canine, short or malpositioned	Composi-Tight® 3D Fusion™ Sectional Matrix Kit	4–5	MOST POPULAR! Separator rings designed to hold firmly on tough cases.
	Reel Matrix™—Metal or Blue View	28–29	Retainerless Tofflemire-style matrices, contoured and easy to apply.
	Slick Bands™ Tofflemire-Style Matrices	30–31	Traditional Tofflemire-style with non-stick coating.
Conservative Class II	Composi-Tight® 3D Fusion™ Sectional Matrix Kit	4–5	MOST POPULAR! Superior contacts with minimal flash.
	Reel Matrix™—Metal or Blue View	28–29	Retainerless Tofflemire-style matrices, contoured and easy to apply.
	Slick Bands™ Tofflemire-Style Matrices	30–31	Traditional Tofflemire-style with non-stick coating.
Slightly wide and/or deep	Composi-Tight® 3D Fusion™ Sectional Matrix Kit	4–5	MOST POPULAR! Superior contacts with minimal flash.
	Reel Matrix™—Metal or Blue View	28–29	Retainerless Tofflemire-style matrices, contoured and easy to apply.
	Slick Bands™ Tofflemire-Style Matrices	30–31	Traditional Tofflemire-style with non-stick coating.

Procedure	Recommended Materials	Page	Special Notes
Large Class II with missing cusps	Composi-Tight® 3D Fusion™ Sectional Matrix Kit—Green Wide Prep Ring	4–5	EXCLUSIVE! Dentistry's first Wide Prep ring greatly simplifies these more challenging restorations.
	Reel Matrix™—Metal or Blue View	28–29	Retainerless Tofflemire-style matrices, contoured and easy to apply.
	Slick Bands™ Tofflemire-Style Matrices	30–31	Traditional Tofflemire-style with non-stick coating.
Small to medium size Class III	Fusion™ Anterior Matrix System	6–7	Bands and wedges with ideal gingival-incisal curvature for many types of anterior lesions.
	VariStrip™ Contoured Anterior Matrices	34	Pre-contoured in three dimensions AND tapered to provide the ideal band height and contour.
Large Class III or Class IV	Fusion™ Anterior Matrix System	6–7	Bands and wedges with ideal gingival-incisal curvature for many types of anterior lesions.
	VariStrip™ Contoured Anterior Matrices	34	Pre-contoured in three dimensions AND tapered to provide the ideal band height and contour.
Class V	Blue View™ Cervical Matrix	35	Contours and directly compresses resin while eliminating air-inhibited layer.
Crown build-ups, post and core	Reel Matrix™	28–29	Best choice. Margin Elevation band available for very deep buildups. Retainerless convenience.
	Slick Bands™ Tofflemire-Style Non-Stick Matrices	30–31	Margin Elevation band available for very deep buildups if you prefer a traditional matrix retainer.
