

Giant Flock Chandelier Installation Instructions

Only qualified persons should assemble the luminaire. If in doubt, consult a suitably qualified person. Installation MUST be carried out in accordance and compliance with current building regulations. Due to the size and weight of the Flock Chandelier, a minimum of 3 people are required to install the luminaire.

Ensure the electrical supply is turned OFF at the fuse board.

***** It is important to read these instructions all the way through before starting the installation. *****

Stage 1 - Preparation for hanging the chandelier

We have included four additional cup hooks and four bungees within the box of the chandelier. These will help hold the Flock close to the ceiling, allowing the electrical connection to be made without having to hold the top plate at the same time.

1. Identify if there are any hidden pipes or electrical cables in the ceiling to avoid causing damage or risk of electrical shock during installation. Screw the four loose cup-hooks into the ceiling next to where the chandelier will hang (A). This will likely be where the electrical supply wire protrudes from the ceiling. You may need to drill pilot holes and use additional fixings (e.g. plaster board plugs) dependant on ceiling structure. **The ceiling structure must be capable of supporting the weight of the chandelier (8-10kg).** We would always recommend finding a ceiling joist if possible.
2. Hook the four elasticated bungees off the cup hooks attached to the ceiling (A).

Stage 2 - Hanging the chandelier

3. Carefully remove the Flock Chandelier including the supporting plywood frame from the box ensuring it is kept upright and level. This will help to minimise the risk of the components becoming tangled. Place the frame on the floor in the same way as it was packaged.
4. With two additional people holding the wooden Flock top plate, slowly undo the circled and labelled screws holding the plate to the plywood frame. Undoing the screws will cause the plate to drop and damage the Flock components if it is not being held securely by two additional people. The frame can now be removed as it is only needed to stop the Flock components being crushed in transit.
5. With two people, carefully lift up the chandelier and hook one end of each bungee onto one of the the cup hooks already in the ceiling (A), loop through the cup hooks on the Flock top plate (B) and then back onto the same hooks in the ceiling (A). The Flock top plate should be hanging from the middle of the elasticated part of each bungee (B).
6. Wire in the three protruding braided wires from the centre of the chandelier to the mains electricity (220-240V AC 50-60Hz). We have supplied electrical crimps to connect all three braided wires to the main electrical supply cable. As the lamp holders are Bakelite, they do not require earthing (C).
7. With two people holding the chandelier plate, remove all of the bungees and cup hooks from both the ceiling and the chandelier plate; the chandelier can now be pushed against the ceiling, exactly in the desired position.
8. Using the screws provided, screw the plate to the ceiling through the four 12mm holes near the centre of the chandelier (D). You may need to drill pilot holes and use additional fixings (e.g. plaster board plugs) dependant on ceiling structure. **The ceiling structure must be capable of supporting the weight of the chandelier (8-10kg).** We would always recommend finding a ceiling joist if possible. Be very careful here not to tangle or get the threads caught in the drill driver.
9. Push the wooden plugs supplied into the screw holes to conceal the screws. Some super glue/wood glue (not supplied) carefully applied to the plugs will ensure they do not fall out over time.
10. Screw in the light bulbs included or bulbs of your choosing. The chandelier has been designed to work with E27 **LED** bulbs, up to a maximum of **25 Watts** each.
11. Starting from the middle, carefully uncoil each of the Flock components from the cardboard rolls and untangle any components which may have become tangled.
12. Turn the power supply on to complete installation.

Giant Flock Chandelier Installation Instructions

Above is a diagram detailing how the Flock Chandelier is secured to the ceiling and connected to the power supply using the bungees provided to aid installation. The bungees take the weight of the chandelier whilst the electrical connection is being made.

Once the connection is made, the bungees and all of the cup hooks in the ceiling and wooden top plate should be removed before screwing the plate to the ceiling. Ensure the chandelier plate is being supported as the bungees are removed so that none of the weight is being held by the electrical wiring.

*** If the external flexible cable or cord of this luminaire is damaged, it shall be exclusively replaced by the manufacturer or his service agent or a similar qualified person in order to avoid a hazard. ***
