

ELIMINATE ODOURS AND ELEVATE WASHROOM HYGIENE

- Continuously reduces bacteria and viruses in the air
- Produces fresh clean air
- Breaks down volatile organic compounds (VOC's)
- Rapid odour control, attacks odours at their source
- Eliminates odour-related complaints
- Removes the need for masking sprays
- Keeps surfaces cleaner for longer
- Destroys airborne microorganisms
- Clears smelly compounds in the air 24/7
- Maintains a consistently fresh washroom environment

› WASHROOM PROBLEMS

Persistent washroom odours create an immediate negative impression and can undermine the perception of cleanliness within seconds. Traditional cleaning methods only provide short-term results, and fragrances simply mask smells without addressing their source.

In enclosed washrooms, odours and hygiene issues build up quickly as organic compounds and microorganisms accumulate in the air. Each toilet or urinal flush releases aerosols carrying microorganisms, which can settle throughout the room. Poor ventilation, shared use, and limited cleaning access allow these contaminants to build up, creating both odour and hygiene problems.

The Washroom Complete range has the flexibility to offer protection for facilities of all sizes, eliminating unpleasant washroom odours and continuously reducing bacteria and viruses.

Consistent air quality creates a fresher, cleaner and more welcoming experience for every user.

AIRsteril ensures a fresh washroom 24/7. With no filters, sprays or consumable chemicals, the system operates safely and efficiently while people are present.

- Fan operation distributes throughout washroom
- Annual lamp change maintains performance
- Robust vandal resistant Aluminium casing
- Wall or ceiling mountable on four screws
- Quickly wired into fused spur
- No filters to change
- Guaranteed odour control
