- Circulates fresh clean air
- Reduces allergens and mould
- Elevates hygiene standards
- Maintains a consistently fresh environment
- Low energy use and minimal maintenance
- Silent and safe operation
- Breaks down odour-causing compounds 24/7

› AIR SILENT BENEFITS

Poor air quality in enclosed spaces quickly affects comfort, confidence and overall wellbeing. Unpleasant odours, allergens, mould and general hygiene issues are all areas of concern. In domestic or work environments, it is essential that any solution does not create noise or disruption. In care homes and similar sensitive settings, illness, incontinence and medical conditions can intensify these issues, meaning that even regular cleaning and disinfecting are often not enough. The use of masking agents can make odours worse.

The AIRsteril Air Silent range operates completely silently, using our advanced thermal UV technology to eliminate unpleasant odours and continuously reduce bacteria and viruses. Safe for use in occupied areas such as bedrooms, offices and care facilities, AIRsteril addresses the root of the problem by constantly reducing odours, airborne microorganisms and allergens.

In combination with good cleaning practice, AIRsteril can resolve even stubborn odour issues that arise from incontinence or medical conditions.

Any smaller spaces can benefit from an Air Silent product.

Area Size	10m2	20m2
Medium odour levels & hygiene control	AS10	AS20
High odour levels & hygiene control	AS10X	AS20X

AS10M & AS20M models available for allergen control only

› AIR SILENT OPERATION

- Silent operation via thermal convection meaning no fan is required
- Annual lamp change maintains performance
- Robust Aluminium casing
- Wall mountable on bracket
- Plug in with in-line switch
- Minimal maintenance
