

REMOVE ODOURS AND LIFT HYGIENE STANDARDS TO A NEW LEVEL

- Continuously reduces airborne bacteria and viruses
- Circulates clean air
- Maintains a fresher, more comfortable environment
- Eliminates odours and improves air quality
- Improves hygiene standards
- Reduces allergens and mould
- Low energy use, safe operation
- Continuous operation for demanding environments
- Clears smelly compounds in the air 24/7

› HYGIENE PROBLEMS

Odours and hygiene issues develop quickly in enclosed or poorly ventilated spaces, especially where people work or gather. Bacteria, viruses and mould multiply quickly in stagnant air, leading to persistent, unpleasant smells that routine cleaning cannot address.

The AIRsteril Multiflex range provides continuous, effective control to maintain cleaner air and eliminate odours between routine cleaning cycles. It works around the clock to reduce airborne microorganisms, lift hygiene levels and keep spaces feeling noticeably fresher for staff and visitors.

Suitable for a wide range of environments including offices, gyms, changing areas and healthcare settings, the Multiflex delivers consistent, reliable results wherever odours and stale air are a recurring issue. With AIRsteril in place, you can be confident every space looks, feels and smells consistently fresh.

- Fan operation distributes air quickly and quietly
- Annual lamp change maintains performance
- Robust vandal resistant Aluminium casing
- Wall or ceiling mountable on four screws
- Plug in or quickly wired into fused spur
