

KÄRCHER

makes a difference

WE ENSURE A FAST, CLEAN BUSINESS.

PROFESSIONAL | AGRICULTURE

Clean solutions for greater success.

Effectiveness and economy, cleanliness and hygiene, functionality and quality. Whatever area of agriculture you operate in, your demands are varied - calling for reliable, powerful and efficient cleaning machines to keep your business running. We know that every capital investment must function trouble-free for many years, and that high standards and legal requirements regarding hygiene must be met in order to achieve and maintain success in your agricultural business. That's why we provide solutions for the optimum protection and care of your machinery, plant, animal houses and buildings. With our professional cleaning machines, accessories and detergents, you can count on the best results in your daily work. Simple to operate and powerful in performance, with Kärcher technologies your procedures will run smoothly, safely and efficiently. And that's what lasting success is based upon.

1 Animal husbandry

We ensure clean quality: with efficient disinfection and cleaning systems for your animal houses. For instance, with the Kärcher Inno or Easy Foam Kits.

Page 4

2 Agriculture and wine growing

Protect capital investments, maintain productivity: with high-performance pressure cleaners and accessories, we offer efficient cleaning solutions for agricultural machinery and equipment, as well as for the oak barrels used in wineries and distilleries.

Page 6

3 Fish farming and forestry

Attention to detail: whether suitable for foodstuffs or space-saving and practical – our high-pressure solutions for fish farming and forestry fulfil all requirements.

Page 8

Hygienically clean. Fantastically quick.

High hygiene standards are an indispensable part of professional animal husbandry because assured quality is the first step to optimal operating results. Regular thorough pen cleaning - i.e. coarse cleaning as pre-cleaning, disinfection and also coarse cleaning in-between times - are therefore a must in order to protect animals against disease carrying pathogens and pests. With Kärcher high-pressure cleaners and the innovative Inno or Easy Foam Kits, you can master this task quickly, easily and effectively. As a result, you not only gain improved hygiene and a healthy stock of animals, but also and, in particular, save a lot in terms of working time and costly medications.

Compact

Well equipped, compact design: with cold water high-pressure cleaners, you can clean your animal houses quickly and reliably.

High-performance

For rigorous continuous use and the highest performance. Maximum pressure, the greatest flow rate and the best equipment are standard here.

Robust

For particularly difficult terrain: Kärcher's special class removes stubborn dirt in inaccessible places.

1 Pig breeding

Cleanliness and hygiene are what counts here! For this reason, Kärcher cleaning and disinfecting processes are optimised for animal houses, during rearing or before changeover.

2 Cattle breeding

Ideal rough cleaning with pressure – e.g. for excrement and feed residues in the igloo during calf rearing or on lying surfaces.

3 Dairy cattle

Where germs collect, hygiene is the top priority. In the milking parlour and the milking carousel, our high-pressure cleaners and patented foam disinfection are the ideal choice.

4 Poultry farming

Bacteria, viruses and vermin don't stand a chance. With effective disinfection in poultry production and the rearing of young birds, as well as during final cleaning in the service period of egg production and hatchery disinfection.

5 Sheep, goat and horse husbandry

Our high-pressure cleaners are ideal for cleaning out stalls. Excrement deposits and soiled straw bedding are easily removed.

Surface cleaners

Up to 10 times greater surface performance. Without spray water and without cross contamination, especially suitable for slatted floors, as the spaces in between can also be reached more easily.

Foam lance

For safe use with foam – e.g. during foam disinfection in the milking parlour.

Beaker foam lance

For smaller areas and targeted work.

Cleaning to show off your assets.

Professional production requires quality machinery you can trust for many years. It is therefore essential – regardless of whether it is high-performance machines for agriculture or wine making – to maintain long-term functionality by means of regular care and cleaning. With Kärcher, maintaining the value of your plant is an easy task: effective cleaning systems, a wide range of applications, extensive accessories and, last but not least, many innovations, such as, for instance, the time saving Barrel Cleaner BC 14/12, will all help you protect your capital investments. In this way, our appliances not only ensure clean systems but also incur less expenditure, as costly new acquisitions can be deferred.

With cold water

Thanks to pressure and pump capacity, you can clean even the heaviest soiling quickly, thoroughly and economically.

With hot water

Shift grease and stubborn dirt more quickly, easily and economically with hot water high-pressure cleaning. With steam mode for thawing and degreasing tasks.

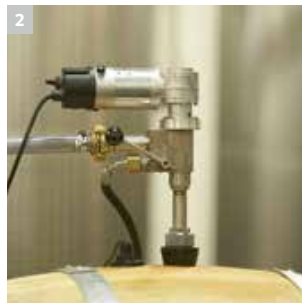

Stationary

Especially compact, stationary appliances can be wall-mounted and are particularly well-suited where cleaning is to be carried out in several places at the same time, thus saving space.

1 Machinery cleaning

Agricultural machinery must be able to cope with large quantities of mud, dirt and dust. With Kärcher high-pressure cleaners, stubborn crusts, oil and grease deposits can be thoroughly removed, ensuring corrosion protection, prolonging the lifetime and performance of your assets.

2 Barrel cleaning

The easy way to get your barrel looking as good as new: with the Kärcher BC 14/12 you can clean your barrels practically and quickly without laborious repositioning. All deposits left from fermentation processes, maturing, or from years of storage are removed completely and efficiently.

Protects your machinery

Optimal cleaning and care of your plant: Kärcher cleaning concentrates remove even the most stubborn accumulations of dirt caused by mud and organic materials in the course of daily work. In this way you avoid corrosion to your machinery and at the same time prepare perfectly for the winter.

Control pressure simply

Kärcher appliances provide maximum convenience – thanks to innovative technologies such as Servo Control. This feature means that the water volume and the working pressure of our high-pressure cleaners can be controlled directly at the trigger gun. As and when required, without interruption and very conveniently.

Mastering every challenge.

Special tasks demand exceptional solutions. Whether this involves compliance with statutory fish farming regulations or time-consuming forestry work – with Kärcher you are ideally equipped. From the disinfection of your breeding tanks, through complete hygienic cleaning of transport vehicles requiring special disinfection, to the easy-to-manage bark and cambium peeling. Our advanced and efficient appliances ensure effectiveness and increased economy of work, regardless of the challenge you have to meet.

Disinfecting

With our Inno or Easy Foam Kits, thorough disinfection of your plant is faster, safer and more economical.

Independent

Even without electricity! Our diesel-engine powered high-pressure cleaners always deliver a high level of performance.

Convenient

Wherever regular cleaning has to be carried out, Kärcher high-pressure cleaning systems are ideal.

1 Fish farming

Every surface hygienically clean: with our Inno or Easy Foam Kits, you can disinfect breeding/holding tanks quickly and efficiently and also your vehicles and containers before and after transportation. In the high-pressure foam process, two components work together in an efficient and environmentally friendly way to combat bacteria, viruses and pests. And that at a low concentration, at almost any temperature and in an extremely short time.

2 Forestry

Avoid pest infestations, speed up the drying-out process – with Kärcher high-pressure cleaners you avoid wood-loss during debarking and work especially effectively. Ideally suited for this are the robust cage appliances for difficult terrain. Clean your vehicles and machinery when the work is done with stationary high-pressure cleaners in your plant.

Hygienically clean

When safety counts: Kärcher offers the appropriate appliances and accessories for every requirement. We also offer special solutions for the sensitive hygiene and food area with, for instance, abrasion and oil resistant materials. And with the potent Inno or Easy Foam Kits, moreover, we ensure thorough disinfection.

More options for forestry enterprises

Equipped to go anywhere: our petrol-engine powered high-pressure cleaners mean you are not reliant on electrical power out in the forest. To clean the vehicle fleet at your business in a space-saving way, Kärcher high-pressure cleaning systems are ideal. Here, thanks to multiple attachment points for high-pressure hoses, you can undertake several cleaning tasks at the same time.

Details make the difference.

Quality is attention to detail. This should not only be seen in your products but also in your plant, animal houses, commercial and private buildings. For this reason, Kärcher also devotes its attention to the smaller details of everyday life and offers efficient cleaning solutions here, too. Ensuring thorough cleanliness right into the tiniest corner. At little expense, an order can be established which helps prevent accidents and at the same time creates a better overall atmosphere. For a place where you want to work, live – or even shop. A place, in fact, where everything is just right, down to the last detail.

1 Sell in more attractive surroundings

Present your products in perfect surroundings. Our compact, flexible and easy to use scouring vacuum cleaner, with their easy mobility and high performance, quickly provide sparkling results. Clean-up is simple and fast.

2 Vacuum everything

With Kärcher wet/dry vacuum cleaners, dirt of any kind no longer presents a problem. You can switch from dry to wet without changing the filter. Even larger volumes of liquid can be removed effectively and conveniently.

3 Live in more attractive surroundings

A lot of work creates a lot of dirt – but at home it should be immaculate. No problem with Kärcher dry vacuum cleaners: they loosen and vacuum even stubborn dirt such as threads and fabric fibres.

4 Reach new heights

With high-pressure upwards: thanks to the new telescopic pipe, you can now clean high up without the need for a lifting platform – for instance, light shafts in the turkey house. The flexible articulation and hand spray gun on the telescopic jet pipe are safe and ergonomic.

Uncomplicated

Simple filter change on wet/dry vacuum cleaners.

HEPA-Filter technology

Keeps allergens down and ensures clean exhaust air when dry vacuuming.

Ergonomic

Hand spraygun on the telescopic pipe.

5 Clean working procedures

Efficient and convenient: whether the farmyard, paths or storage halls – Kärcher manual sweepers remove dirt quietly, quickly and thoroughly. Thanks to the side brushes (as standard) you can reach every corner. Also available as a petrol powered unit (option).

6 Clean everywhere

Clean right into the furthest corner: with the flexible jet pipe for our high-pressure cleaners, even the inaccessible parts of your machinery will always be cared for. Thanks to the stepless flexible adjustment from 20° - 140°.

7 No residues

A clean workplace: with Kärcher wet/dry vacuum cleaners, you can also remove dust and wet dirt from drivers' cabs or trailers, leaving them as good as new. Even seed residues can be thoroughly and completely removed.

8 Fit for the winter

Great area-performance with large and firm snow masses: Kärcher snow blowers are fast, convenient and economic. And, thanks to the 4-stroke motor, fuel consumption is very low.

Adaptable

Reach inaccessible places with the jet pipe.

Effective

Side brushes on hand power sweepers also sweep in corners.

Powerful

Robust 4-stroke engines deliver high performance.
