

KÄRCHER

makes a difference

CLEANING YOU CAN COUNT ON.

PROFESSIONAL | CONSTRUCTION

Making sure dirt doesn't overrun a building site.

Robust, durable and effective - these are qualities you can count on with innovative Kärcher cleaning machines. Reliable and effective equipment is indispensable when dealing with the many types of dirt found in the construction industry and trade. Whether for vehicle, machinery, building or floor cleaning, with Kärcher's economical solutions you are optimally equipped. They are easy to use, powerful and constructed for the roughest conditions. With Kärcher's sophisticated technology, you will complete your cleaning jobs more quickly and with greater ease.

1 Kärcher in construction
With robust and innovative machines, Kärcher makes all kinds of cleaning quick, easy, economical and effective.

Page 4

2 Clinging dirt

For muck that clings to concrete residue: high-pressure appliances can remove even the most stubborn residual dirt.

Page 6

3 Loose dirt

Dust, shavings and loose material can be removed easily and effectively with Kärcher's high-powered vacuum cleaners.

Page 8

4 Large-volume dirt

Indoors or out – power sweepers guarantee economical use and remove dirt – such as for final site clean-ups – without a trace.

Page 10

5 Special requirements

High performance for the most extreme cases: from cutting concrete at high pressure to extra-safe appliances in high risk areas.

Page 12

Cleaning solutions for the toughest conditions.

The construction industry and trade face the toughest working conditions every day – as well as high cost pressure and little time. Cleaning must also adapt to these challenges. For this reason, Kärcher has developed solutions to help you save time and manpower – highly robust products that will optimise cleaning results with their high level of performance. Kärcher machines and accessories last longer, are tougher and offer many well-thought-out, detailed solutions to make your work quicker and easier.

With many years of experience in the area of professional cleaning, Kärcher knows just what is important on construction sites, in workshops and warehouses: saving time, cleaning without additional effort, ease of use and, last but not least, appliance robustness and reliability. Kärcher therefore always develops solutions with these specific requirements in mind. All units under-go lengthy testing, are easy to operate and built to last.

Whether you require appliances suitable for crane lifting or a space in which to install a toolbox, Kärcher takes every demand into account. We also place great emphasis on cost-effectiveness: long service lives and uninterrupted work as a result of the best filter technology, for instance, ensure greater efficiency. Your investment should pay off quickly – every time you use it. You can be sure that with Kärcher, you always have the best equipment, no matter the working conditions.

1 High performance

To make sure that you lose no time in eliminating stubborn residues or large volumes of dirt, Kärcher products offer particularly high performance. For instance, with Kärcher high-pressure and ultra high-pressure units, you can remove sticky muck quickly and effectively. With up to 2,500 bar pressure, blasting agents and detergents become unnecessary.

2 Robust

Kärcher machines are developed for the tough conditions of a construction site, with stable construction, solid bumpers and protective tubular cage frame. In addition, all components such as nozzle attachments are developed for maximum durability and extensively tested.

3 Practical

Kärcher machines are equipped with practical features for quick, convenient and effective cleaning. They are largely maintenance-free and allow uninterrupted work with the innovative Tact filter system, for instance, or can be connected directly to your power tools.

4 Safe

With anti-static systems, automatic shutdown when the water fill level is reached during wet/dry suction, integrated exhaust monitoring and various dust class ratings, Kärcher vacuums always guarantee maximum safety. This allows you to meet all the tasks required in your trade.

Remove sticky dirt easily.

When dirt just won't come off, a bit of pressure helps. With Kärcher hot and cold water high-pressure cleaners, you can remove even the most stubborn layers of any kind of dirt – such as dust, paint or even concrete. With up to 350 bar at your fingertips, you can clean building façades, the ground and machinery quickly and effectively. The whole process can be carried out conveniently and, in some cases, without any cleaning agents at all. Various nozzle attachments ensure flexible use and diverse application, which, paired with extreme durability and robustness, make Kärcher machines an investment that will pay off for many years.

Unheated

Highly mobile for use anywhere. With high pressure and high delivery rates, you can remove even the toughest dirt quickly, thoroughly and economically.

Heated

Thoroughly convincing: with high temperatures, you will clean even more economically – delivering high performance that is normally only possible with stationary machines.

Robust

Stand-alone units built for lifting by cranes, with robust tubular frames and sturdy pneumatic tyres. Even without electricity, a combustion motor delivers the highest power.

1 Work cleanly

Protect your investment and ensure long-term durability. Free your workplace, components and machinery of dust, dirt and other adhering residues. With Kärcher cold-water high-pressure cleaners, the process is quick and effortless.

2 Building facade cleaning

Eliminate grime powerfully and quickly without damaging the basic structure of the building. You can adjust water volume and pressure easily to adapt the process to any surface.

3 Floor cleaning

Residues can be easily and effectively removed with cold-water high-pressure cleaners. Using the FR 30 Me attachment with integrated suction device which provides for 10 times the area capacity, this is even easier and more economical than with conventional attachments provides 10 times the area capacity, delivering an even easier and more economical clean.

Made for the construction industry: Kärcher high-pressure cleaners are lightweight to transport, offer different nozzles for all requirements, and can be operated conveniently directly from the hand spray-gun using the servo control so that you can work without having to go up to the appliance.

Loading is no problem: suitable for cranes thanks to lifting points.

Adaptable for every job: nozzle attachments for increased effectiveness and flexibility.

No interruptions: control water and pressure volume directly from the handle.

Tangible results with loose dirt.

Kärcher wet and dry vacuums are precisely the right tool for removing loose residue and particles. From compact, lightweight models to multi-motor high-capacity machines, these products can be used to suck up anything: from fine dust to coarse dirt, from liquids to lubricants. With extreme suction power and capacities of up to 100 litres, any job can be completed quickly. Thanks to drain hoses installed as standard, liquid in the reservoir is easily drained. And with features like the Tact automatic filter clean system, these machines are ready for any challenge a building site can throw at them.

Compact

Maximum mobility with the best suction power. Includes clever details such as integrated accessory storage, carrying handle and much more.

Robust

High performance and stable design. Automatic filter cleaning, complete inventory of accessories and high mobility round off the package.

Durable

Ideal for long working intervals without breaks: Kärcher suction devices with the Power Filter Clean System for constantly high suction power.

1 Work dust free

Whether you are sanding, cutting or drilling, with Kärcher appliances you can suck up the dust right at the source. Your tool can be connected directly to the unit and even works with integrated automatic start/stop. The anti-static system, installed as standard, ensures optimum safety.

2 Dry suction

Dust, chippings and dirt have no chance: with up to three powerful motors and up to 235 mbar power, all particles are sucked away with no remnants. Innovative filter technology ensures constantly high suction power.

3 Wet suction

With the flat-pleated filter you can switch between wet and dry suction without changing the filter and without any interruption. Another benefit: convenient access to the main filter makes maintenance quick and easy.

No interruptions: the patented Tact automatic filter cleaning system is simply constructed, easy to maintain and ensures constantly high suction power.

Highly mobile and easy to transport: smaller machines feature comfortable carry handles, and larger machines have push-bars and large wheels.

Everything to hand at all times: to ensure that you are always equipped for any task, all accessories are stowed directly in the appliance.

Highly practical: no lengthy searches for a socket on site - simply plug tools directly into the suction unit.

Little effort at high volume.

Whether inside or out, high-productivity Kärcher sweepers are well-suited for the optimum cleaning of construction sites, factory premises or warehouses, from final construction site clean-up to quick interim sweeping up. From compact appliances for manual use to high-volume ride-on machines, Kärcher offers everything you need for easy, ergonomic and efficient floor cleaning. Thanks to their ease of operation and low-maintenance technology, the machines are quickly ready to use and can easily remove large piles of dirt.

Helpful

Quicker and more economical in small areas than a broom. Effortlessly sweeps up all types of dirt, even in the tightest corners.

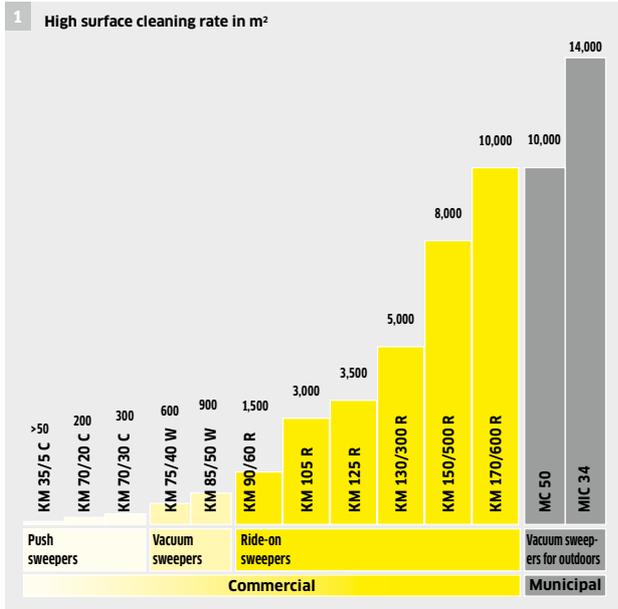

Comfortable

Ideal for mid-size areas. These suction power sweepers save time and energy, clean all areas easily and efficiently, and even suck up large particles.

Powerful

Fully hydraulic, high-performance, robust and easy to operate. Ride-on sweepers with integrated operating systems that are suitable for even the toughest demands.

1 Cost-effective use

Make the most economical decision - see which machine is right for your application. Surface area, volume and frequency of cleaning will determine machine selection. We are happy to help you work out the best options.

2 Outdoors

With easy operation, long work intervals and high performance, Kärcher machines make outdoor sweeping more economical. Since no tools are required to replace filters and sweeping rollers, they are also highly maintenance-friendly.

3 Indoors

For greater efficiency in your warehouses, or for interim cleaning on a construction site: Kärcher sweepers always achieve the best results thanks to high manoeuvrability, ease of use and an adjustable main sweeping roller.

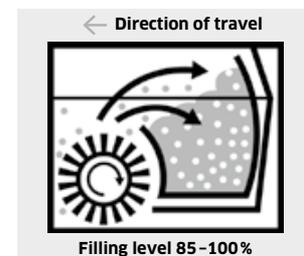

Simple, practical and effective, Kärcher machines are easier to use and more convenient to empty. With a sweeping principle that fills the hopper 100%, longer work intervals are also possible.

Easy:
just one control for all functions.

Practical:
hydraulic high dump.

Effective:
high-speed sweeping principle fills dirt hopper 100%.

For special requirements, extreme power helps.

Resistance is futile: Kärcher offers the best appliances for the toughest jobs. For instance, with extreme-pressure appliances and pressures up to 2,500 bar, removing the most stubborn dirt is child's play. With this power, even concrete can be roughened and steel reinforcements exposed. Even hazardous or explosive dust can easily be removed with our safety vacuums. Sensitive surfaces can be cleaned gently but highly effectively with modern dry ice blasters. Regardless of whether you need extreme safety, extreme pressure or extreme sensitivity, with Kärcher appliances, you have just the right equipment.

Extremely safe

Anti-static, with suction hose locking and earthed to the intake socket. Also approved for dust class H or M.

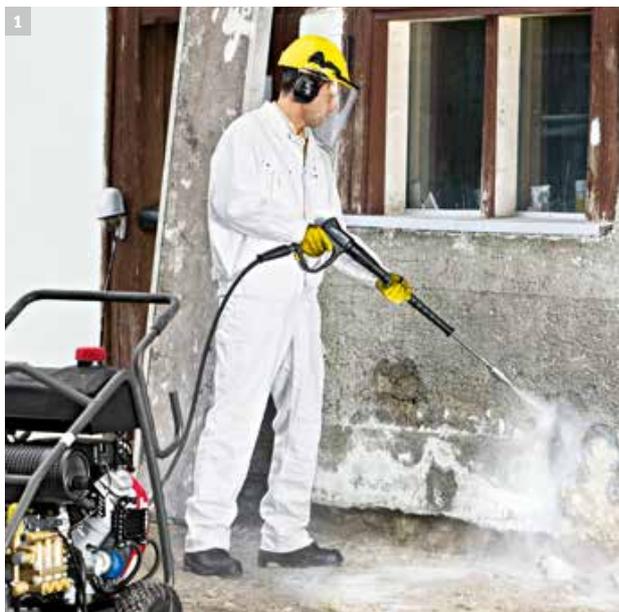

Extremely gentle

Ice blasters remove tough dirt in an innovative manner. Without damaging surfaces, without corrosion problems and without contaminated waste water.

Extremely powerful

Whether in a cage frame suitable for use with cranes or as a mobile trailer, hot- and cold-water extreme-pressure cleaners make any job possible with up to 2,500 bar pressure.

1 Concrete restoration made easy

The easy and economical way of preparing the surface, whether roughening new concrete, removing any old coatings or loosening thick bitumen layers. With cold-water extreme-pressure appliances and pressures up to 2,500 bar depending on the model, your job is soon done.

2 Remove stubborn dirt easily

With dry ice blasters, not only can surfaces be gently cleaned of oil, grease and resin, but paint particles can also be removed quickly and effectively during building cleaning. This all takes place without the basic structure of the building being damaged, without additional cleaning products and without waste water residue.

3 Hazardous dust

Deal with high-risk materials safely: asbestos, coal, nickel, tar and mould are hazardous to health. Kärcher safety systems are ideal for disposing of such substances and meet all industrial safety requirements.

Safe, durable and robust. Kärcher appliances for special situations can meet the toughest demands so that your investment continues to pay off. Even safety requirements are always exceeded with well-thought-out details.

Safe: the closing cap on the intake socket keeps hazardous dust inside the appliance.

Durable: thanks to wear-free technology, such as recirculation mode, achieved by use of bypass regulator valve.

Robust: special industrial guns that can withstand internal forces at the highest pressures.

Kärcher service – you manage your business, we provide the support.

SUCCESS REQUIRES DETERMINATION. AND A RELIABLE PARTNER. In today's complex world it is hard to reach your goals alone. Partnership is more than ever the key to success. Trust in the capabilities of others, the quality of equipment and their professional use. And the secure feeling of being well-provided for. By a partner with whom goals can be achieved more quickly and safely. Kärcher makes a difference.

We're there for you, wherever you need us.

Kärcher stands for top performance - not just in products, but in service too. For us, being close to our customers means local presence. Worldwide. Wherever you need us. Anytime. Every day.

1 Planning

Kärcher also provides sound advice for your detailed project and property planning. We calculate exactly which resources you need and how you can configure your machines and equipment for optimal results.

2 Hotline*

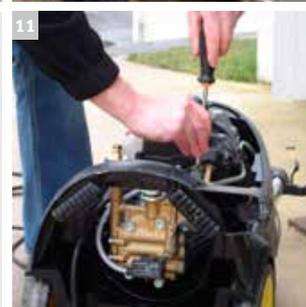

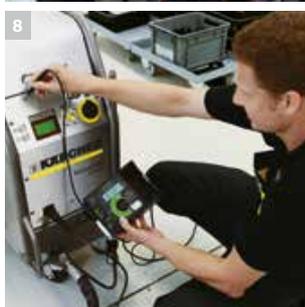

Friendly. Competent. Solution-oriented. Kärcher hotline staff are familiar with all products, accessories and cleaning agents and can provide sound advice and assistance by telephone.

3 Service contracts

Consistently high performance: with our service contracts you can be assured that your Kärcher products will operate reliably at all times, thanks to regular inspection and maintenance or an all-inclusive full service package.

4 Application advice

We provide application advice to ensure that you always have the most efficient solution. Area, staff and schedule are the decisive factors in determining the products that best suit your needs.

5 Global presence

Kärcher guarantees you personal service. Our global network encompasses over 50,000 sales and service points worldwide ensures that you always have a competent contact partner locally, for all enquiries regarding service, advice or sales.

6 Technical training

Get the most out of your equipment: with our local technical training courses, we can show your employees how to use innovative Kärcher products to clean every type of facility optimally.

7 We come to you

Our service management system saves you time and money and ensures that we are with you as quickly as possible. With regular service calls as part of the full service package, and always whenever you need us.

8 Extended warranty

Guarantees a long service life. Our extended warranty or machinery breakdown insurance will give you peace of mind and ensure that your Kärcher products have optimal cover.

9 Tailor-made. Flexible. Safe.

Control your cash flow and remain productive with low leasing fees instead of major investments. Financing to suit you; available with or without an inclusive maintenance contract.

10 Rental machines

Stay as flexible as the market – with Kärcher hire machines you always have the equipment you really need, when you actually need it. Contact us to discuss your options.

11 Refurbished machines

Used, reconditioned machines, at attractive terms. Refurbished Kärcher machines are a cost-effective alternative solution for your project planning. Contact us for latest offers and availability.
