## Single Bike Wall Mount Rack with Tray for Fat Tires

### Assembly instructions RS4008C

- 1 Locate stud beneath wallboard and mark position of desired height to hang bike.
- 2 Use back plate to mark positions for drilling pilot holes for mounting screws. Drill holes.

#### IMPORTANT SAFETY NOTE

Beware of drilling into electrical wire or pipes within wall!

Use spirit level to ensure plate is horizontal when drilling holes for mounting screws.

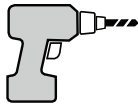

- 3 Hang bike on hook to determine lower plate height.
- 4 Position bottom plate in line with top plate, remove backing tape and adhere to wall.

#### Tools Required

Phillips Head  
Screwdriver

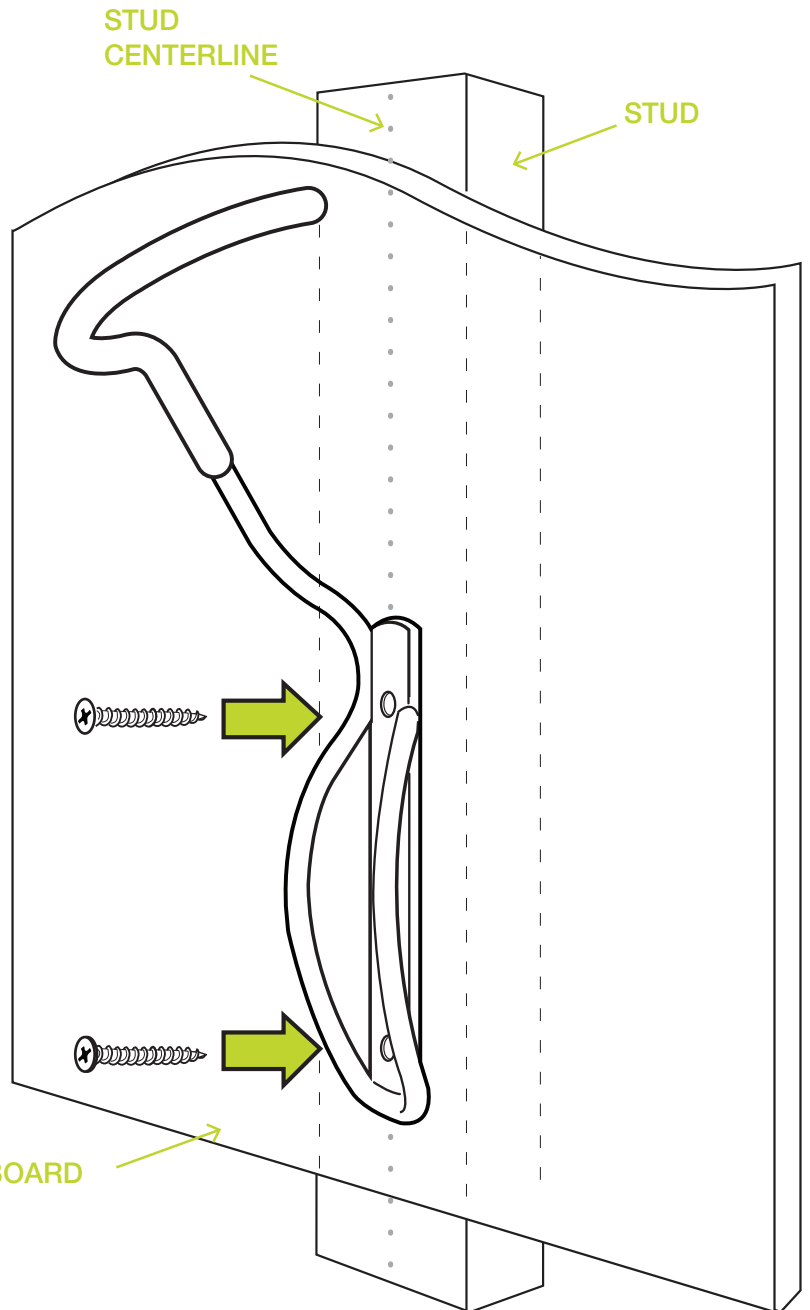

Hand Drill 1/8"  
(3mm)

Spirit Level

Way of locating studs within the wall  
(see hardware store for advice)

#### WARNING

Do not exceed maximum total weight limit of 22.6kg/50lbs. Incorrect wall mounting could result in items falling and injury to persons. Avoid mounting in a position where personal injury could result from walking into protruding rack. Do not allow children to play or hang from Rack.
