

# Cisco UCS Virtual Interface Card 1240

## Cisco Unified Computing System Overview

The Cisco Unified Computing System™ (Cisco UCS™) is a next-generation data center platform that unites compute, network, storage access, and virtualization resources into a cohesive system designed to reduce total cost of ownership (TCO) and increase business agility. The system integrates a low-latency, lossless 10 Gigabit Ethernet unified network fabric with enterprise-class, x86-architecture servers. The system is an integrated, scalable, multichassis platform in which all resources participate in a unified management domain.

## Product Overview

A Cisco® innovation, the Cisco UCS Virtual Interface Card (VIC) 1240 (Figure 1) is a 4-port 10 Gigabit Ethernet, Fibre Channel over Ethernet (FCoE)-capable modular LAN on motherboard (mLOM) designed exclusively for the M3 generation of Cisco UCS B-Series Blade Servers. When used in combination with an optional Port Expander, the Cisco UCS VIC 1240 capabilities can be expanded to eight ports of 10 Gigabit Ethernet.

The Cisco UCS VIC 1240 enables a policy-based, stateless, agile server infrastructure that can present up to 256 PCIe standards-compliant interfaces to the host that can be dynamically configured as either network interface cards (NICs) or host bus adapters (HBAs). In addition, the Cisco UCS VIC 1240 supports Cisco Data Center Virtual Machine Fabric Extender (VM-FEX) technology, which extends the Cisco UCS fabric interconnect ports to virtual machines, simplifying server virtualization deployment.

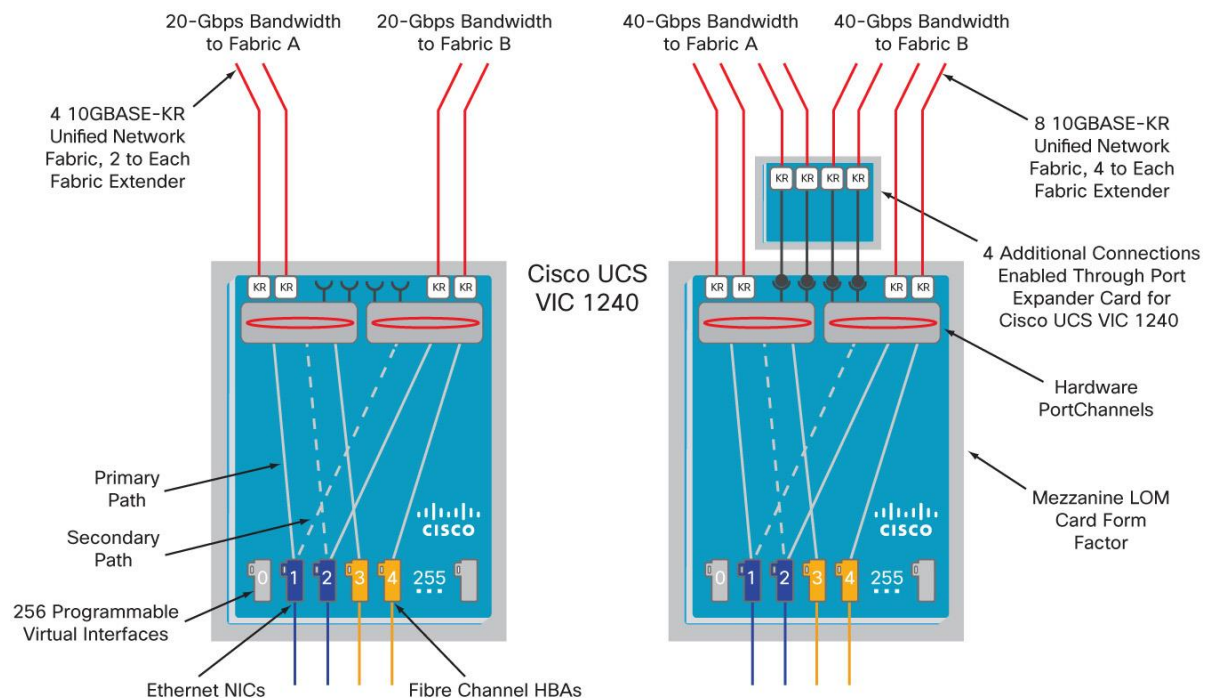

**Figure 1.** Cisco UCS VIC 1240

## Features and Benefits

**Stateless and agile:** The personality of the card is determined dynamically at boot time using the service profile associated with the server. The number, type (NIC or HBA), identity (MAC address and World Wide Name [WWN]), failover policy, bandwidth, and quality-of-service (QoS) policies of the PCIe interfaces are all determined using the service profile. The capability to define, create, and use interfaces on demand provides a stateless and agile server infrastructure (Figure 2).

**Figure 2.** Cisco UCS VIC 1240 Architecture

**Network interface virtualization:** Each PCIe interface created on the VIC is associated with an interface on the Cisco UCS fabric interconnect, providing complete network separation for each virtual cable between a PCIe device on the VIC and the interface on the fabric interconnect.

### Cisco SingleConnect Technology

Cisco® SingleConnect technology provides an exceptionally easy, intelligent, and efficient way to connect and manage computing in the data center. Cisco SingleConnect technology is an exclusive Cisco innovation that dramatically simplifies the way that data centers connect to:

- Rack and blade servers
- Physical servers and virtual machines
- LAN, SAN, and management networks

---

The solution addresses the challenges of today's data center, and the result is a simple, intelligent, and efficient fabric:

- Easy: Cisco SingleConnect technology provides a “wire once and walk away” solution that eliminates traditional manual, time-consuming, error-prone processes and instead makes connecting servers to the Cisco Unified Computing System™ (Cisco UCS®) fast and easy.
- Intelligent: the technology is intelligent because it uses a zero-touch model to allocate I/O connectivity (LAN, SAN, and management) across any type of server: physical rack and blade servers and virtual machines. The network intelligence helps Cisco UCS adapt to the needs of applications. Rather than limiting applications to specific servers, Cisco UCS makes it easy to run any workload on any server.
- Efficient: the technology is highly efficient because LAN, SAN, and management connections are shared over a single network, increasing utilization while reducing the number of moving parts compared to traditional approaches with multiple networks.

Cisco SingleConnect technology is implemented with an end-to-end system I/O architecture that uses Cisco Unified Fabric and Cisco Fabric Extender Technology (FEX Technology) to connect every Cisco UCS component with a single network and a single network layer. As customers expect from Cisco, the Cisco UCS I/O architecture is based on open standards and is reliable, available, and secure.

**Cisco Data Center VM-FEX technology:** Cisco Data Center VM-FEX technology extends fabric interconnect ports directly to virtual machines, eliminating software-based switching in the hypervisor. Cisco Data Center VM-FEX technology collapses virtual and physical networking infrastructure into a single infrastructure that is fully aware of the virtual machines' locations and networking policies (Figure 3). Cisco Data Center VM-FEX technology is implemented by Cisco VICs with a prestandard implementation of the IEEE 802.1BR Port Extender standard.

**Figure 3.** Cisco Data Center VM-FEX with Cisco UCS VIC 1240

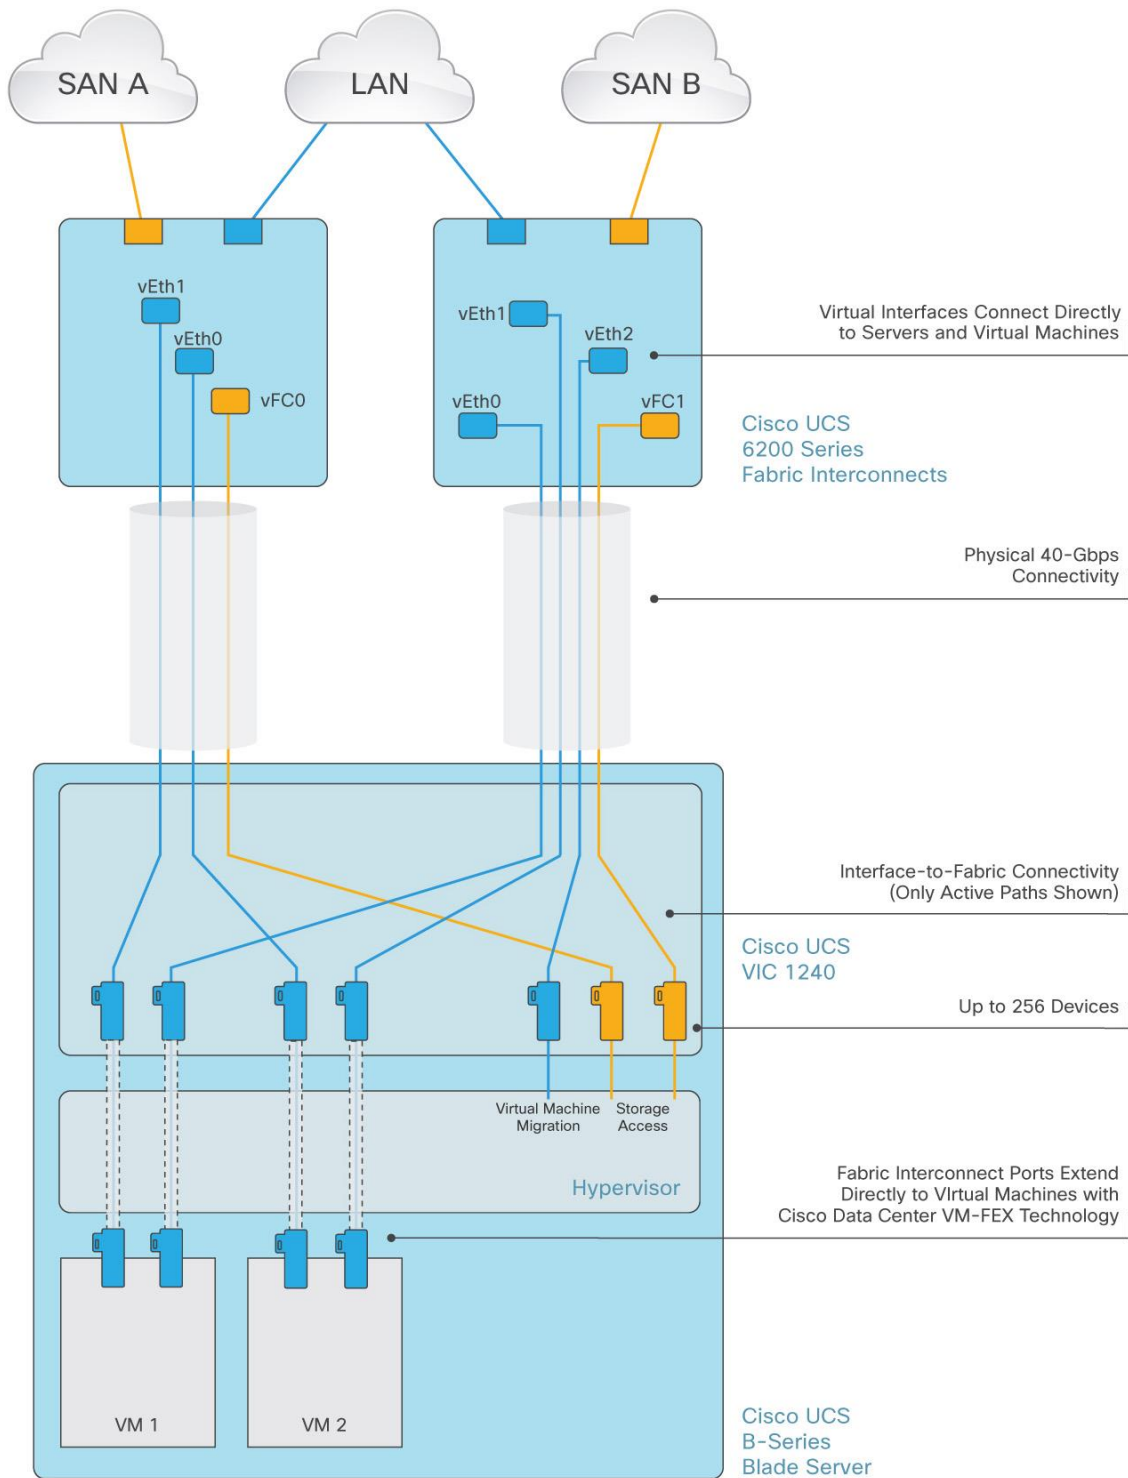

Table 1 summarizes the features and benefits of the Cisco UCS VIC 1240.

**Table 1.** Features and Benefits

| Feature   | Benefit  |
|---|--|
| <b>x16 PCIe generation-2 interfaces</b>                   | Delivers greater throughput  |
| <b>4 x 10-Gbps unified I/O</b>                            | Delivers 40 Gbps to the server<br>Helps reduce TCO by consolidating the overall number of NICs, HBAs, cables, and switches because LAN and SAN traffic runs over the same mezzanine card and fabric  |
| <b>Up to 8 x 10-Gbps unified I/O</b>                      | Delivers 80 Gbps to the server when used with optional Port Expander   |
| <b>Up to 256 dynamic virtual adapters and interfaces</b>  | Creates fully functional unique and independent PCIe adapters and interfaces (NICs or HBAs) without requiring single-root I/O virtualization (SR-IOV) support from OSs or hypervisors <ul style="list-style-type: none"> <li>Allows these virtual interfaces and adapters to be configured and operated independently, just like physical interfaces and adapters</li> <li>Creates a highly flexible I/O environment needing only one card for all I/O configurations</li> </ul> <b>Note:</b> Cisco UCS VIC hardware is SR-IOV capable, and you can enable SR-IOV after SR-IOV is broadly supported by the popular operating systems. Please refer to UCS Manager configuration limits for your specific OS and environment in the <a href="#">configuration guide</a> |
| <b>Cisco SingleConnect technology</b>                     | A single unified network - the same network brings LAN, SAN, and management connectivity to each server  |
| <b>Cisco Data Center VM-FEX technology</b>                | <ul style="list-style-type: none"> <li>Unifies virtual and physical networking into a single infrastructure</li> <li>Provides virtual machine visibility from the physical network and a consistent network operations model for physical and virtual servers</li> <li>Enables configurations and policies to follow the virtual machine during virtual machine migration</li> <li>Provides a prestandard implementation of the IEEE 802.1BR Port Extender standard</li> </ul>   |
| <b>Centralized management</b>                             | Enables the mezzanine card to be centrally managed and configured by Cisco UCS Manager   |
| <b>Network architecture</b>                               | Provides a redundant path to the fabric interconnect using hardware-based fabric failover  |
| <b>More than 900,000 I/O operations per second (IOPS)</b> | Provides high I/O performance for demanding applications   |
| <b>Support for lossless Ethernet</b>                      | Uses Priority Flow Control (PFC) to enable FCoE as part of the Cisco unified fabric  |
| <b>Broad OS and hypervisor support</b>                    | <ul style="list-style-type: none"> <li>Supports customer requirements for Microsoft Windows, Red Hat Enterprise Linux, SUSE Linux, VMware vSphere and Citrix XenServer</li> </ul>  |

Table 2 summarizes the specifications for the Cisco UCS VIC 1240.

**Table 2.** Product Specifications

| Item                                     | Specification  |
|--|--|
| <b>Standards</b>                         | 10 Gigabit Ethernet, IEEE 802.3ae, IEEE 802.3x, IEEE 802.1q VLAN, IEEE 802.1p, IEEE 802.1Qaz, IEEE 802.1Qbb, prestandard IEEE 802.1BR jumbo frames up to 9 KB, Fibre Channel Protocol (FCP) (Small Computer System Interface [SCSI-FCP]), and T11 FCoE |
| <b>Components</b>                        | Cisco UCS custom application-specific integrated circuit (ASIC)  |
| <b>Ports</b>                             | <ul style="list-style-type: none"> <li>4 x 10-Gbps FCoE ports</li> <li>8x 10-Gbps FCoE ports, with optional Port Expander card</li> </ul>  |
| <b>Connectivity</b>                      | Cisco UCS midplane   |
| <b>Performance</b>                       | 10-Gbps line rate per port   |
| <b>Management</b>                        | Cisco UCS Manager Release 2.0(2)   |
| <b>Number of interfaces</b>              | 256 virtual interfaces (approximately 8 are reserved for internal use; other factors such as the OS and hypervisor may limit this number further)  |
| <b>Physical dimensions</b>               | Length = 7.25 in. (18.4 cm)<br>Width = 3.65 in. (9.3 cm)   |
| <b>Typical power</b>                     | 12 Watts<br>15 watts with the Port Expander Card   |
| <b>Inlet operating temperature range</b> | 50 to 95°F (10 to 35°C)  |

---

## System Requirements

The Cisco UCS VIC 1240 is designed to be used only on the M3 generation of Cisco UCS B-Series Blade Servers. The modular LOM is not designed or intended for other purposes.

## Warranty Information

Find warranty information at Cisco.com on the [Product Warranties](#) page.

## Cisco Unified Computing Services

Using a unified view of data center resources, Cisco and our industry-leading partners deliver services that accelerate your transition to a unified computing architecture. Cisco Unified Computing Services helps you quickly deploy your data center resources, simplify ongoing operations, and optimize your infrastructure to better meet your business needs. For more information about these and other Cisco Data Center Services, visit <http://www.cisco.com/go/unifiedcomputingservices>.

## Why Cisco?

Cisco UCS continues Cisco's long history of innovation in delivering integrated systems for improved business results based on industry standards and using the network as the platform. Recent examples include IP telephony, LAN switching, unified communications, and unified I/O. Cisco began the unified computing phase of our Data Center 3.0 strategy several years ago by assembling an experienced team from the computing and virtualization industries to augment our own networking and storage access expertise. As a result, Cisco delivered foundational technologies, including the Cisco Nexus<sup>®</sup> Family, supporting unified fabric and server virtualization. Cisco UCS completes this phase, delivering innovation in architecture, technology, partnerships, and services. Cisco is well positioned to deliver this innovation by taking a systems approach to computing that unifies network intelligence and scalability with innovative ASICs, integrated management, and standard computing components.
