

Radiation

Take home points

- Radiation is the use of high energy waves to target the DNA of cancer cells in a specific location.
- Radiation is really good at killing cancer cells that are grouped in one location.
- The target for radiation depends on the type of cancer, stage, specific case, and other factors.
- Many different types of radiation are used today, but external beam radiation is the most common type.

Other questions I have...

Other questions I want to ask my doctor.

What should I ask my doctor?

- Do I need radiation?
- What is the goal of the radiation?

What I am thinking...

My notes and thoughts.
