PPE - Eye/Face Protection	Goggles recommended during refilling.
PPE - Skin Protection	The glove material has to be impermeable and resistant to the product/the substance/the preparation/the chemical mixture. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation. The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application. The exact break through time has to be found out by the manufacture of the protective gloves and has to be observed.
