

SUP Crossbar Roof Pad System

Vendor part number 02500

SKU 40478058

For Automobiles with racks and < 2" wide cross bars

Easy Steps

1. Open Velcro and wrap roof pads around cross bars. Secure tightly w/ Velcro closure.

2. Lay paddle board face down with nose down toward windshield.

3. Holding onto buckle end, toss loose end over the top of the board. Feed end around bar of roof rack & back across top of board.

4. Put 3 twists in straps across roof. Feed end of strap around bar & into buckle .

5. Ensure padded side of buckle lays against edge of board. Pull snug (not tight at this point). Ensure metal part of buckle cannot contact board & cause damage.

(Repeat steps 3-5 on second straps)

6. After both straps are snugged up, pull both tight so there is even tension on both front and back straps. Do not overtighten.

7. Tie knot with the remaining loose strap (very close to the buckle to keep strap from slipping in buckle). Tie/wrap remaining strap to roof rack or pinch in window to prevent flapping in the wind.
