

Place uprights against located stud on wall and mark location for holes. Use a spirit level to make sure it is vertically aligned. Ensure second upright is horizontally aligned and level with the first upright, when marking locations for holes. Drill 1/8" (3mm) pilot holes. Then secure the uprights to wall using screws provided.

NOTE: If mounting to a drywall, use the included drywall anchors (Part H). Drywall anchors require 5/16" (8mm) pilot holes. Once holes are drilled gently tap drywall anchors into place, then secure uprights using screws provided.

*Installing into wood studs is the recommended method.

Beware of drilling into electrical wire or pipes within wall!

WARNING

Do not allow children to play or hang from Shelving Kit. Maximum weight 18 kg (40 lbs) per shelf arm, evenly distributed on properly installed rack into studs. Installing into a drywall will reduce the weight capacity
