h² Water Mixable Oil Paint

If you love the idea of Oil paint, but feel a little tentative to give them a try due to the solvents used in conjunction with them. Then maybe Mont Marte® Water Mixable Oil Paint is for you.

Mont Marte® Water Mixable Oil paint is a true Oil Paint that dries and cures through oxidization, but can be thinned and washed up in water. The traditional linseed oil binder in the oil paint has been molecularly altered by being charge – polarized, so it becomes hydrophilic, and this enables it to be dissolved in water.

So Water Mixable Oil Paint is the same as traditional oil paint in many aspects. The real difference is that water can be used instead of turpentine, and other solvents to wash up and dilute the paint. The negation of solvents make the process of painting with these Oil paints, clean, convenient, and make for a healthy and environmentally sound work space.

As well as sharing the same characteristics as traditional Oil Paint, Mont Marte® Water mixable Oils are also compatible with traditional oil based paints and mediums, including water based emulsions, such as Gouache, Acrylic Paint and of course water. This opens up many options, with the prospect of exciting new colours and effects now possible to the artist.

Water Mixable Oil Paint features a smooth buttery consistency that is consistent across the whole range of colours. The Pigments used in the paints manufacture are of a high quality, and each colour is individually formulated to ensure the natural characteristics of the pigments are intensified as much as possible. This ensures that any colours mix cleanly, provide excellent coverage and offer superior tinting strength.

Mont Marte® Water Mixable Oil paints enable one to accomplish traditional techniques, such as impasto, dry brushing, scumbling and glazing. The paint can be applied with all synthetic and natural brush types and is ideal for palette knife painting and sgraffito techniques. Sand can also

be added to the paint to create interesting effects.

Water Mixable Oil Paint can be painted over Acrylic emulsions and used on Canvas, Linen, Wood, Air Dry Clay, Polymer Clay, Plaster, Leather and some plastics.

This mixed with the paint's slow drying attributes, enables one to effortlessly blend colours and facilitates subtle tonal transitions. All the qualities we know and love about Oil Paint.

Mont Marte® Water Mixable oils are very easy to use, and they can be mixed with up to 25% of water - the paint will still exhibit excellent light fastness and tenacious bonding qualities.

Currently there are 48 vibrant diverse colours in the range that cover the standard chromatic gamut as well as transparent colours. There is also a compatible linseed based medium in a fluid form, and a thicker medium in gel form available. These mediums can be used to adjust the paints flow ability and create translucence within the paint for underpainting stages and glazes. Both mediums can also be used with traditional oil paint.

So explore the limitless possibilities that you and Mont Marte® Water Mixable Oil Paint can create together.

48 vibrant diverse colours available across the range.

Compatible with traditional oil mediums, acrylic and gouache paints.

Suitable for beginners and students through to professional artists.
