Microgreens Kit

ALL-IN-ONE!

GROWING INSTRUCTIONS:

1. Prepare kit by placing the netted insert in the green plastic tray.
2. Choose a pre-seeded mat and saturate with warm water.
TIP: Warm water will make seeds sprout sooner!
3. Place mat on netted insert and cover with humidity dome. **2 mats will fit side-by-side.**
4. Place kit in a warm area with temperatures between 65° and 75° degrees near a sunny window.
5. Mist mats twice daily, making sure they remain moist at all times. Keep covered.
6. Once seeds germinate, remove humidity dome and allow good air flow. Mist microgreens to keep them fresh and growing.
7. **HARVEST!** When microgreens reach 1-3 inches, cut as needed.
