YOUR ADVANTAGES AT A GLANCE

EXCELLENT SOUND FOR  
MUSIC AND PRESENTATIONS

ANTI-THEFT PROTECTION  
KENSINGTON LOCK

AN EYE-CATCHER  
IN ANY SPACE

SUPERIOR SPEECH INTELLIGIBILITY  
AND FREEDOM OF MOVEMENT IN  
MEETINGS AND CALLS

IP64 CERTIFICATION TO CONFIRM  
THE PROTECTION AGAINST  
SPLASH WATER

EASY TO CONNECT VIA  
BLUETOOTH®, USB OR THE  
OPTIONAL DONGLE

WIDE-RANGING PLATFORM COMPATI-  
BILITY WITH MICROSOFT TEAMS®, ZOOM  
(CERTIFIED FOR ZOOM) AND OTHERS

BATTERY RUNTIME  
UP TO 20 HOURS

FIRMWARE UPDATES  
VIA UPDATE HUB

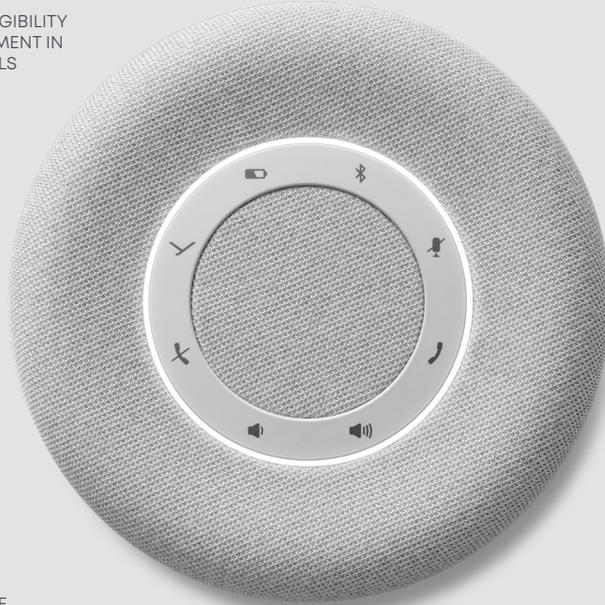

BEST-IN-CLASS ECHO  
CANCELLATION

INTUITIVE OPERATION VIA  
LED CONTROL PANEL

TALK AND LISTEN AT THE SAME TIME  
DUE TO FULL-DUPLEX AUDIO

# PURE FREE SPACE

## WHAT IS A SPEAKERPHONE?

A speakerphone is a mobile combination of hands-free solution and loudspeaker.

The **beyerdynamic SPACE** speakerphone is not only the perfect everyday companion for dynamic employees, it is also the ideal meeting solution for businesses, agencies and start-ups.

For decades now, beyerdynamic has been known for excellent sound quality. This expertise can be found to its full extent in **beyerdynamic SPACE**. Thanks to the combination of innovative microphone technology and a high-quality loudspeaker system, **beyerdynamic SPACE** simultaneously offers optimal speech intelligibility and riveting reference sound – whether in huddle rooms, small meeting rooms, as a travel companion on field trips or as a multimedia device for presentations.

**beyerdynamic SPACE's** suitability as a hands-free solution for businesses is underlined by further features that are tailored to companies of today, such as a Kensington lock, antibacterial textile, the Business Mode for secure Bluetooth® coupling, an optional USB Bluetooth® adaptor (dongle) and much, much more.

## MAXIMUM APPLICATION FLEXIBILITY

- Personal speakerphone for single offices
- Conference solution for huddle rooms
- Conference solution for small meeting rooms
- Multimedia device for perfect sounding presentations
  - Travel companion on field trips
  - Playing music during afterwork get-togethers with colleagues

## OPTIMAL SPEECH INTELLIGIBILITY DURING DAY-TO-DAY BUSINESS

**beyerdynamic SPACE** is the product of our many years of microphone development expertise: innovative 360° SMART MIC TECHNOLOGY means **beyerdynamic SPACE** offers maximum freedom of movement for meetings with up to six participants.

With a maximum distance of 2.5 metres between the speaker and **beyerdynamic SPACE** and – depending upon the size of the room and the table situation – the speakerphone can also be used by larger groups.

The microphone system features four MEMS microphones. Thanks to modern beamforming technology and state-of-the-art signal processing, it automatically recognises whether the incoming sounds are voices or background noise and blanks out undesirable reverb, echo and feedback. In this respect, the implemented echo cancellation sets a new benchmark.

And **beyerdynamic SPACE** automatically adjusts the volume of voices, ensuring dialogue is always harmonious. Full-duplex allows participants to speak simultaneously and still be heard, without dropouts or cut offs.

Thanks to True Wireless, two **beyerdynamic SPACE** devices can even be linked for spatial music playback – perfect for riveting business presentations.

## HERE TO STAY:

**beyerdynamic SPACE** can be secured against theft in meeting rooms or huddle rooms with the help of the integrated Kensington lock.

An integrated ¼-inch screw thread offers a multitude of installation options, enabling e.g. fixed installation should the speakerphone be required in a stationary position.

## SECURE CONNECTIONS FOR DISCUSSIONS ON DELICATE TOPICS:

For huddle rooms or small meeting rooms, **beyerdynamic SPACE** has a Business Mode, which can be simply activated via the control panel. This prevents the device inadvertently connecting to another nearby device via Bluetooth® – in the interests of personal privacy and data protection.

## AN EYECATCHER IN ANY OFFICE

Its hygienic, antibacterial bicolour textile means **beyerdynamic SPACE** looks good in any environment. Available in three colours – Nordic Grey, Charcoal and Aquamarine – every company will be able to find the speakerphone that's right for them.

The illuminated LED control panel offers optimum clarity and easy, intuitive access to all important functions for video calls or media playback during presentations.

And IP64 certification confirms that it is protected against water spray – perfect for intense discussions when a drink might get spilled in the heat of the moment.

## WIDE-RANGING PLATFORM COMPATIBILITY

Broad compatibility lets you make phone calls, meetings or private calls quickly and easily via communication platforms apps, such as Microsoft Teams® and Zoom.

## FIRMWARE UPDATES MADE EASY

Continuous firmware updates ensure that our products are always up to date. Any software update works with our update hub, regardless of whether it's for Mac or Windows. Simply download the update hub for the corresponding operating system from the website, follow the instructions and enjoy new functions!

## USB BLUETOOTH® ADAPTER (DONGLE)

An optionally available USB Bluetooth® adapter (dongle) will provide extended remote compatibility between personal speakerphone and communication apps.

## MEETS THE DEMANDS OF EVERYDAY LIFE

With its battery time of up to 20 hours, **beyerdynamic SPACE** offers maximum flexibility without the need for constant charging. And if your huddle room doesn't have a mains socket and your meeting is running late: just ten minutes of charging will enable **beyerdynamic SPACE** to be used for up to two hours. Its compact design and included drawstring bag make this flexible speakerphone perfect for spontaneous room changes and business trips.

The intuitive set-up lets the **beyerdynamic SPACE** be easily connected to a laptop, smartphone or tablet via USB or Bluetooth® – all without installing unnecessary drivers. The USB cable (USB-C® to USB-C®) and the USB-C® to USB-A adapter, both included as standard, mean that you can set up every connection type.

## WORK & LEARN

No matter whether digital seminar or workshop, virtual lectures or lessons – pupils, students and educational institutions are nowadays increasingly turning to virtual learning and content transfer. **beyerdynamic SPACE** is a reliable companion for such purposes.

**beyerdynamic SPACE** enables e.g. teachers, professors or seminar leaders to hold their lessons or lectures from the comfort of their own homes – with optimum sound quality and maximum freedom of movement.

But even on site, **beyerdynamic SPACE** makes for a flexible multimedia device that will provide presentations, lessons and seminars with optimum sound quality.

## BEAMFORMING

When using beamforming, the speakerphone selects the desired audio signals, such as voices, and eliminates interfering signals such as fans due to intelligent signal processing.

## DONGLE

A dongle is a small USB stick that enables certain functions in conjunction with another device. For example, computer keyboards or computer mice are often used for a wireless connection with a dongle. The same applies to **beyerdynamic SPACE**. The dongle enables excellent remote compatibility with communication platforms such as Microsoft Teams® via Bluetooth®.

## ECHO CANCELLATION

When using a full-duplex speakerphone, it does not only pick up the voices of the participants, but naturally also the echo of its own loudspeaker during the playback of audio signals. To eliminate this echo signal, the so-called echo cancelling is used.

## FULL-DUPLEX AUDIO

Thanks to full-duplex, audio signals are transmitted in both directions allowing participants to speak and be heard at the same time which results in a harmonious conversational atmosphere.

## HUDDLE ROOM

A huddle room is a small meeting room where normally meetings with a maximum of six people can take place. Usually, the rooms have been optimised for video telephony and are suitable for both spontaneous and planned meetings.

## IP CERTIFICATION

The IP certification states the type of protection of technical devices against external influences and dirt.

## KENSINGTON LOCK

The Kensington lock is a mechanical anti-theft protec-

tion for securing notebooks, laptops or even speakerphones. It uses a wire rope which can be attached to the hardware device provided for this purpose.

## MEMS MICROPHONES

MEMS microphones are space-saving microphones that can be used directly on electrical circuit boards. This makes them ideal for use in compact devices such as **beyerdynamic SPACE**. MEMS means Micro Electro Mechanical System.

## SPEAKERPHONE

A speakerphone is a mobile combination of a hands-free solution and loudspeaker. It is used for phone calls and meetings via communication platforms such as Microsoft Teams® or Zoom, or for phoning with a smartphone. **beyerdynamic SPACE** is also ideal for music playback thanks to the high-quality speaker system.
