

MyTrash NAMI

We stopped looking at trash as a problem and started seeing it as the resource it is. And we created a chair with the shell made from Danish household plastic trash.

MyTrash **NAMI**

We stopped looking at trash as a problem and started seeing it as the resource it is. And we created a chair with the shell made from Danish household plastic trash.

HANS THYGE & CO

Hans Thyge & Co consists of passionate designers with bold ideas and a love for beautiful design. Together we work with a combination of a strong tradition and a drive to explore the unknown and innovative parts of design.

The design studio specializes in designing furniture, objects, and interiors. We juggle with everything from technical projects and lifestyle concepts to branding and communication and always with a strategic, sustainable, and commercial approach in mind. We have a long history of know-how and experience working with a variety of materials and production methods for clients worldwide.

Working with many nationalities and different design approaches worldwide, demands an attitude of openness and collaborative skills. The mixture of different cultures and design-traditions is the hot-spot where great design comes to life.

We believe in combining brain and heart, function, and aesthetics, and that every design should tell a story; a product is so much more than the product itself, it is about creativity, vision, culture, company values, the past, the present and the future.

NAMI

The NAMI Café table consists of a powder coated steel frame with a beautifully molded plastic table top. The table top is made in Denmark from 97% Danish household plastic trash with 3% color pigment added.

The table comes in 2 different colors: Black or olive green, with a frame in the same color as the table top. The table top is made from Danish household trash and the table is produced in Denmark.

FROM TRASH TO TREASURE

Developing NAMI, HOUE was determined that the right steps were taken in creating a responsible collection of chairs.

By using household plastic trash instead of virgin – or recycled industrial plastic, it is not only the recycling of plastic and the use of trash that is beneficial – there are also significant savings on the amount of energy used in production.

When creating products from household plastic trash, we worked from a systematic perspective, taking into account how things are always connected. Consequently, we base our decisions on facts and thorough documentation.
