“Guess what?” asked Steve. “What?” asked Max. “My mom and dad said that I get to adopt a pet!” said Steve. “Wow!” said Max. “What type of pet are you going to get?” “That’s the problem,” said Steve. “I can’t decide! I have always wanted a pet goldfish. They are easy to take care of. Goldfish stay in their bowl. Each day, you feed them some fish food. Every week, my mom will help me change the water. I don’t have to take a goldfish on walks. I don’t even have to train it! There’s one problem. The goldfish will not be a buddy for me. That’s why I also want a dog! A dog can walk around the house with me and play with me outside. I still have to feed the dog, but I also have to do other things, too. I will need to pick up after my dog. He will need exercise, so I will have to take him on walks. Dogs are a lot of work!”
“I see what you mean!” said Max. “Why don’t you go to the pet adoption center and then decide. That way you can meet some fish and some dogs. After meeting them, decide which one you will adopt.” “That is a great idea!” said Steve.
Steve and his parents went to the pet adoption center. First, he went to the fish aisle. He stared at each fish. The fish just kept swimming. They looked pretty! Next, they went to the puppy aisle. Steve stared at each dog. The dogs were wagging their tails. They were trying to get to him! Steve picked up a puppy. The puppy licked his face. “This is the one!” said Steve. “This is the pet that I want to adopt!”

J The Moon Name _____

Vocabulary reflecting phases rotating

Did you know that the Moon does not give off any light? The reason why you see the Moon light up at night is because it is reflecting the light from the Sun. As the Moon moves around Earth, we see different parts of the Moon reflect off of the Sun. This is why we see the Moon in different shapes during the month. These are called the phases of the Moon. Have you ever noticed that the Moon is sometimes full or completely round? What about when the Moon looks like a cookie that has a bite missing out of it? The Moon appears to be different shapes at different times. However, the Moon does not actually change its shape. The only thing that is changing is how much light is reflecting off of the Moon.

The Moon is constantly rotating around Earth. It takes 29.5 days to go around Earth. That is about the same amount of time as one month on a calendar. During this time, we see the Moon go through eight phases. They are the new moon, waxing crescent, first quarter, waxing gibbous, full moon, waning gibbous, last quarter, and waning crescent. We cannot see a new moon at night. There is not enough light reflecting. A waxing moon is a growing moon. A waning moon is a shrinking moon. A crescent is the shape of the Moon when it looks like someone took a bite out of it. Finally, a full moon is a fully lit circle.

1 If the Moon does not give off light, how do we see it at night?

2 How long does it take the Moon to rotate around Earth?
