

## Through-Floor Home Lifts

### Freedom in your Home

Our range of through-floor home lifts are designed to give you absolute freedom in your home.

With a wide range of sizes available and virtually unlimited options when it comes to personalising your lift, we've made it easier than ever to access every part of your house.

To book your free home assessment please see a list of our branches on the back page.

### Through-floor Lifts

Designed to be unobtrusive in the home, the lift is installed by simply cutting a hole in the floor and installing the lift! It's that simple.

They offer a solution that is more comfortable than a stairlift, and does not require the extensive construction of a lift shaft.

### Open-Car or Enclosed?

At Millercare, we offer 2 types of through-floor lift, the open-car and the enclosed.

The VM is our open-car model, and we have two Enclosed models, the VE (capable of transporting multiple occupants simultaneously) and the Ellesse (designed to be a compact, comfortable stairlift alternative).
