LET'S TWIST AGAIN

TRUST

Let's Twist Again. An ergonomic crutch in an attractive design, available in five modern colors: green, yellow, orange, silver and black. It can be adjusted in length to fit different users. The armrest of Let's Twist Again is made of strong plastic and the construction is of aluminum which makes the crutch very light.

Elegant colors and detailed solutions give the crutch a daring design and extraordinary character.

The handle is made of TPE, thermoplastic rubber, giving a steady and comfortable grip. The handle is ergonomically designed and tested so that the grip and the palm should rest and be supported comfortably.

The height adjustment holes are only on the lower tube, which makes the crutch more elegant. A locking ring makes the crutch even safer and quieter.

The natural rubber foot has a grip pattern towards the ground to ensure a steady hold against gravel, asphalt or paving. The foot can easily be exchanged.
