	Application		Technical data	Sizing
	<p>Unilift CC Unilift CC is a submersible pump designed for pumping clean, non-aggressive water and slightly dirty (grey) wastewater. Unilift CC can pump down to 0.12" water level and can be used in permanent installations or as a portable pump.</p>		<ul style="list-style-type: none"> • Max. flow rate, Q: 62 GPM • Max. head, H: 30.8 feet • Liquid temp.: 32 °F to 104 °F • Max. particle size: 0.4" • Material: Composite • Suction down to 0.12". 	 <p>TM04 3028 3508</p>
Drainage	<p>Unilift KP Unilift KP is a submersible pump designed for pumping clean, non-aggressive water and slightly dirty (grey) wastewater such as domestic effluents from septic and sludge treating systems.</p>		<ul style="list-style-type: none"> • Max. flow rate, Q: 65 GPM • Max. head, H: 32 feet • Liquid temp.: 32 °F to 122 °F • Max. particle size: 0.4" • Material: Stainless steel. 	 <p>TM04 3029 3508</p>
	<p>Unilift AP12 Unilift AP12 is a submersible pump designed for pumping clean, non-aggressive water and slightly dirty (grey) wastewater. The pump can be used as a portable unit.</p>		<ul style="list-style-type: none"> • Max. flow rate, Q: 140 GPM • Max. head, H: 52 feet • Liquid temp.: 32 °F to 131 °F • Max. particle size: 0.4" • Material: Stainless steel. 	 <p>TM04 3030 3508</p>
	<p>Unilift AP35 Unilift AP35 is a submersible pump designed for pumping dirty water, untreated wastewater (excluding toilet discharge) and liquids containing fibers from light industry, laundries, etc. with particles up to 1.4".</p>		<ul style="list-style-type: none"> • Max. flow rate, Q: 79 GPM • Max. head, H: 39 feet • Liquid temp.: 32 °F to 131 °F • Max. particle size: 1.4" • Material: Stainless steel. 	 <p>TM04 3031 3508</p>
Effluent	<p>Unilift AP35B Unilift AP35B is a submersible pump designed for pumping effluents (excluding toilet discharge). The pump is suitable for installation on auto coupling; this allows easy access to the pump for maintenance and other purposes.</p>		<ul style="list-style-type: none"> • Max. flow rate, Q: 92 GPM • Max. head, H: 43 feet • Liquid temp.: 32 °F to 104 °F • Max. particle size: 1.4" • Material: Stainless steel 	 <p>TM034 3033 3508</p>
	<p>Unilift AP50 Unilift AP50 is a submersible pump designed for pumping dirty water, untreated wastewater and liquids containing fibers from light industry, laundries, etc. with particles up to 2.0".</p>		<ul style="list-style-type: none"> • Max. flow rate, Q: 140 GPM • Max. head, H: 41 feet • Liquid temp.: 32 °F to 131 °F • Max. particle size: 2.0" • Material: Stainless steel. 	 <p>TM04 3032 3508</p>
Domestic sewage	<p>Unilift AP50B Unilift AP50B is a submersible pump designed for pumping effluents. The pump is suitable for installation on auto-coupling allowing easy access to the pump for maintenance and other purposes.</p>		<ul style="list-style-type: none"> • Max. flow rate, Q: 136 GPM • Max. head, H: 49 feet • Liquid temp.: 32 °F to 104 °F • Max. particle size: 2.0" • Material: Stainless steel 	 <p>TM04 3034 3508</p>

2. General data, Unilift

Performance range

Applications

The Unilift CC, KP and AP are submersible wastewater pumps suitable for temporary as well as permanent free-standing installation.

The pumps are designed for intermittent operation.

pH values:

- Unilift CC: 4 to 9
- Unilift KP: 4 to 9
- Unilift AP: 4 to 10.

Maximum density: 146.88 ounce/gallon.

Maximum installation depth below water level: 34 feet.

Examples of applications

Application	Unilift pump type						
	CC	KP	AP12	AP35	AP35B	AP50	AP50B

Wastewater definitions

Drainage

Raw water, drainage and untreated wastewater containing solids no larger than 0.4" from households, farms and small industry.

Effluent

Dirty water and untreated wastewater (excluding toilet discharge), containing fibers and solids no larger than 1.4" from dewatering systems, domestic wastewater systems and small industry.

Sewage

Untreated wastewater and raw sewage containing fibers, textiles and other solids, including toilet discharge from domestic sewage systems, farms and industry no larger than 2.0".

V = Vortex impeller									

Construction

Vertical, single-stage, submersible centrifugal pumps with horizontal or vertical discharge port designed for free-standing installation or for installation in collecting tanks.

The pumps are directly connected to an asynchronous submersible motor for 1 x 115 V + 6/- 10 %, 1 x 230 V + 6/- 10 %, 60 Hz.

Enclosure class: IP68

Insulation class: B or F.

Unilift pumps

Single-phase pumps incorporate thermal overload protection and require no additional motor protection.

Installation

The pumps are suitable for free-standing installation.

Pumps for vertical dry tank installation can be installed by means of a stationary stand with suction bend.

Follow current local electrical codes or national electric codes (NEC) for electrical connection of pumps.

3. Technical data and performance curves

Unilift CC

Product description

TM03 1358 1805

Fig. 1 Unilift CC

Unilift CC 5, CC 7 and CC 9 pumps are single-stage submersible pumps able to pump down to 0.12" water level. The pumps are designed for pumping rainwater and grey wastewater from places such as

- washing machines, baths, sinks, etc. from low-lying parts of buildings up to sewer level
- cellars or buildings prone to flooding
- draining wells
- collecting wells for surface water with inlets from roof gutters, tunnels, etc.
- swimming pools, ponds or fountains.

The pumps are suitable for permanent installation or they can be used as portable pumps. They are available in two versions:

- M for manual operation
- A for automatic operation.

The pumps allow free passage of particles up to 0.4".

Approvals

Pumped liquids

The pumps are suitable for these liquids:

- clean, non-aggressive water
- slightly dirty (grey) wastewater.

The pumps are **not** suitable for these liquids:

- liquids containing long fibres
- inflammable liquids (oil, petrol, etc.)
- aggressive liquids.

If the pump has been used for other liquids than clean water, it should be flushed through with clean water immediately after use.

Components included

The pump is supplied with an adapter and a non-return valve.

The adapter has 0.75", 1" and 1.25" NPT external threads. It must be cut to fit the discharge pipe.

The non-return valve can be fitted in the adapter to pre-vent backflow through the pump when it stops.

Pump sleeve and housing

The sleeve is made of composite material cast in one piece with a 1.25" NPT external pipe thread (G) discharge connection. A slot on the handle holds the float switch cable.

The main cable and flow switch cable are introduced into the sleeve through hermetically sealed cable entries.

The suction strainer is fitted to the sleeve by giving it a light push and can be removed easily by means of a screwdriver or similar tool. The water enters the pump through the holes of the suction strainer preventing the passage of large solids. The large holes also ensure a slow flow into the pump.

Suction to low water level is obtained by removing the strainer.

Motor

The motor is a single-phase, asynchronous, dry-rotor motor. The axial rotor position is secured by means of a ball bearing. The motor is cooled by the pumped liquid around the motor.

	Insulation class	Enclosure class
Unilift CC 5	B (115 V) F (230 V)	IP68
Unilift CC 7	B (115 V) F (230 V)	IP68
Unilift CC 9	B	IP68

The motor incorporates automatic overload protection cutting out the motor in case of overload. When cooled to normal temperature, the motor will restart automatically.

Materials

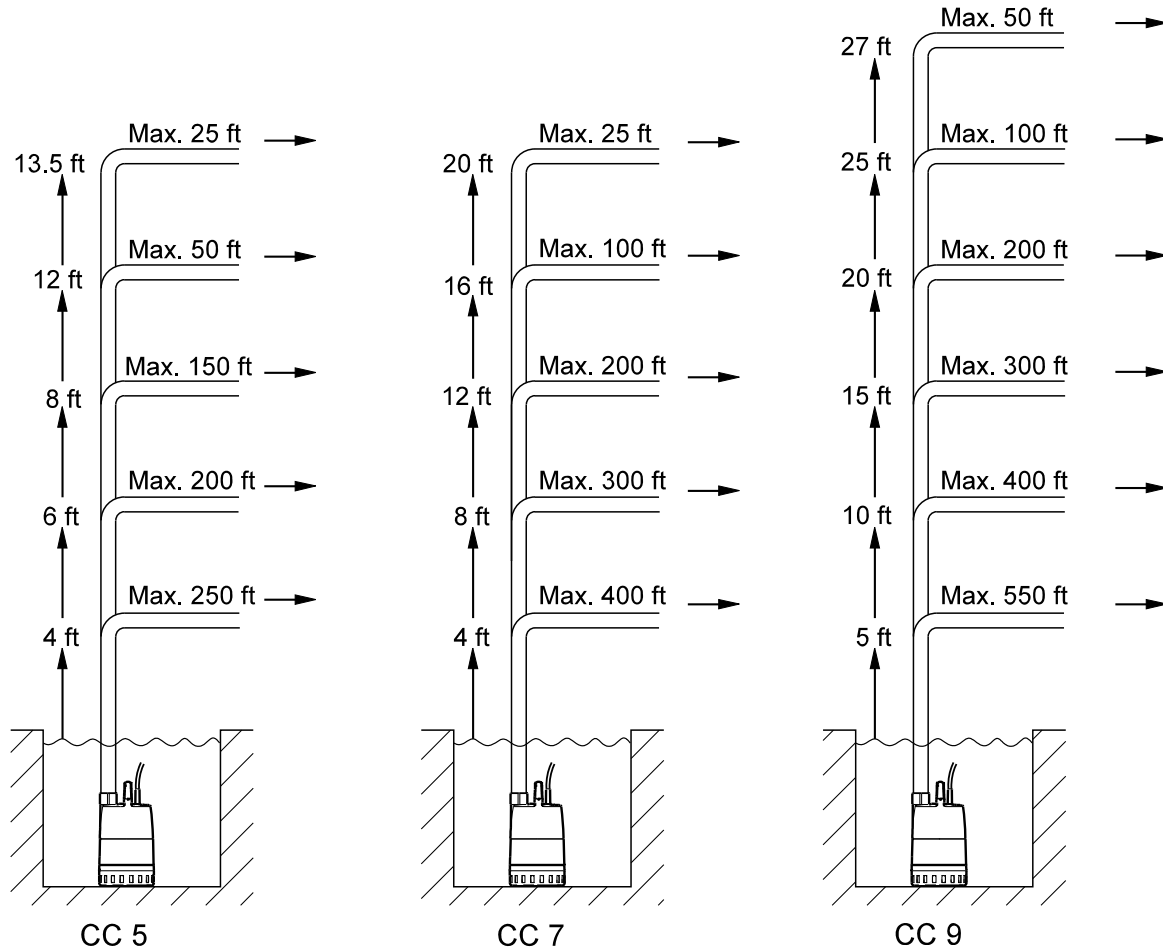

Component	Material	DIN W.-Nr.
Motor sleeve	PP 15 GF	
Pump sleeve	PP 15 GF	
Impeller	PPOm 20 GF	
Suction strainer	Stainless steel class A2	1.4301
V-ring	NBR 50	
O-rings	NBR 70	
Cable	SJTW-A 3AWG18	

Selection

The flow velocity through the discharge pipe must be minimum 2.3 ft/s to ensure self-cleaning.

Example: Schedule 40 PVC discharge pipe with an inner diameter of 0.824" requires a minimum flow velocity of approximately 4 gpm.

The overview below shows the maximum lengths of combined vertical and horizontal Schedule 40 PVC discharge pipes.

The overview is only intended as a guide. Grundfos is not liable for installations not complying with the overview.

Note: If a non-return valve is used, the pressure drop in the valve will be approximately 0.6 ft head which must be subtracted from the vertical pipe lengths.

The vertical height of the discharge pipe should be measured from the pump stop level.

TM04 3041 3508

Performance curves

TM04 2257 2208

Operating conditions

Liquid temperature

32 °F to 104 °F.

However, at intervals of at least 30 minutes, the pump is allowed to run at maximum +158 °F for periods not exceeding two minutes.

Installation

The pump can be used in the vertical position as well as in the tilted or horizontal position with the discharge port as the highest point of the pump. The suction strainer must be covered by the pumped liquid.

Fig. 2 Pump positions

TM00 1111 1005

Installation depth

Maximum 32 ft below the water surface.

Adjustment of cable length for float switch

The difference in level between start and stop can be adjusted by changing the free cable length between the float switch and the pump handle.

- Increasing the free cable length results in fewer starts/stops and a large difference in level.
- Reducing the free cable length results in more frequent starts/stops and a small difference in level.

In order for the float switch to start and stop the pump, the free cable length must be minimum 3.94" and maximum 7.87".

Fig. 3 Start-stop levels, Unilift CC

TM03 0829 0505

Pump type	Cable length (L) Min. 3.94"		Cable length (L) Max. 7.87"

With float switch

Fig. 4 Minimum well dimensions, Unilift CC

If the pump is installed in a collecting well, the minimum dimensions of the well should be as shown above to ensure free movability of the float switch.

Without float switch

Fig. 5 Pump dimensions

The space required corresponds to the physical dimensions of the pump.

Unilift KP

Product description

Gr0111

Fig. 6 Unilift KP

The Unilift KP pump is designed for liquid transfer and drainage of clean or slightly dirty wastewater with the pump completely or partly submerged in the liquid.

The pump is suitable for these applications:

- drainage of flooded cellars or buildings
- pumping of domestic wastewater without toilet waste
- emptying of pools, tanks and vessels
- pumping within agriculture, the dairy industry, horticulture and the process industry.

Approvals

Pumped liquids

The pumps are suitable for these liquids:

- clean, non-aggressive water
- slightly dirty (grey) wastewater.

If the pump has been used for other liquids than clean water, it should be flushed through with clean water immediately after use. The open-impeller construction ensures a free passage of solids up to a diameter of 0.4".

Operating conditions

Installation depth: Max. 30 ft below liquid level

Min. liquid temperature: 32 °F

Max. liquid temperature at continuous operation: 122 °F

During continuous pumping, the suction strainer must always be completely covered by the liquid.

Max. liquid temperature: 158 °F for periods not exceeding two minutes at intervals of at least 30 minutes.

Discharge port

Unilift KP 150, KP 250 and KP 350: 1.25" NPT.

Construction

Single-stage, submersible, stainless steel, drainage pump in a robust design with upward-pointing discharge port placed on top of the pump.

The water enters the pump through the holes of the suction strainer, preventing the passage of large solids. The sturdy impeller has single-curved vanes with bevelled front edges preventing fibres from jamming the impeller. The guide vanes in the pump housing guide the liquid, lifting sand grains into the liquid flow, thus preventing blocking by sand.

The pump sleeve is made in one piece. The mains cable enters through a vulcanized and water-tight plug, which is secured to the socket of the hermetically sealed stator housing.

Motor

The motor is a single- or three-phase asynchronous canned motor with liquid-filled rotor chamber and water-lubricated bearings. The motor is cooled by the pumped liquid around the motor.

Enclosure class: IP68

Insulation class: F.

The motor incorporates automatic overload protection which cuts out the motor in case of overload. When cooled to normal temperature, the motor restarts automatically.

Materials

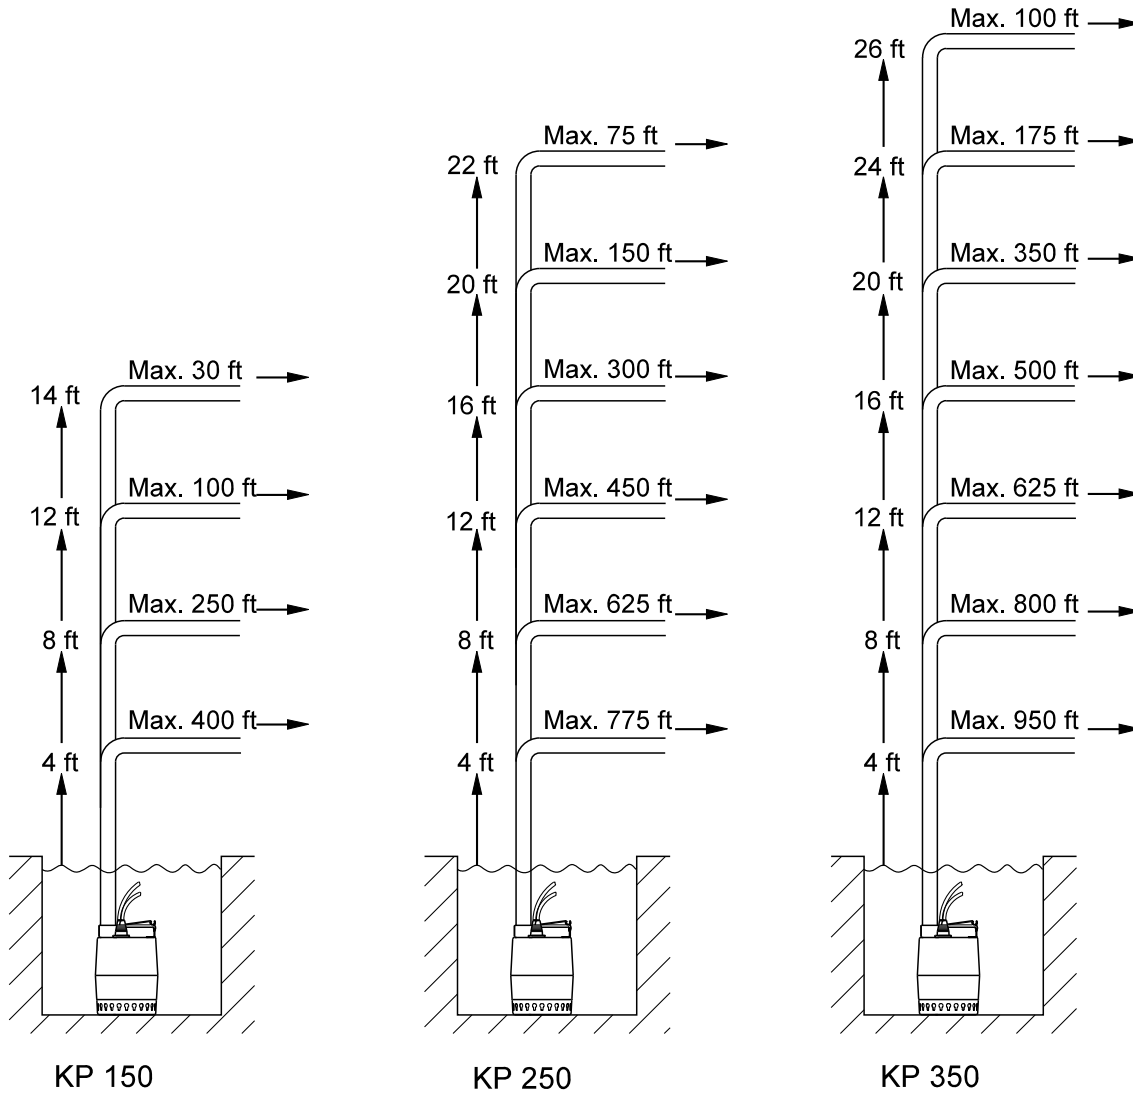

Component	Material	DIN W.-Nr.	AISI
Pump sleeve	Stainless steel	1.4301	304
Pump housing	Stainless steel	1.4301	304
Suction strainer	Stainless steel	1.4301	304

Bearings	Carbon		
O-rings, Seal rings	NBR		
Cables	16 AWG 3/C SJOW 90C		

Selection

The flow velocity through the discharge pipe must be minimum 2.3 ft/s to ensure self-cleaning.

Example: Schedule 40 PVC discharge pipe with an inner diameter of 1.38" requires a minimum flow velocity of approximately 12 gpm.

The overview below shows the maximum lengths of combined vertical and horizontal Schedule 40 PVC discharge pipes.

The overview is only intended as a guide. Grundfos is not liable for installations not complying with the overview.

Note: If a non-return valve is used, the pressure drop in the valve will be approximately 0.6 ft head which must be subtracted from the vertical pipe lengths.

The vertical height of the discharge pipe should be measured from the pump stop level.

TM04 3040 3508

Performance curves

TM04 2409 2508

Installation

Pumps without float switch can be used in vertical position with the discharge port pointing upwards or in horizontal or tilted position with the discharge port as the highest point of the pump.

Fig. 7 Pump positions

TM00 1548 0493

Adjustment of cable length for float switch

A clamp on the pump handle holds the float switch cable. The difference in level between start and stop can be adjusted by changing the free cable length between the pump handle and the float switch.

Fig. 8 Start-stop level, Unilift KP

TM03 4331 2006

Unilift AP12

Product description

Fig. 11 Unilift AP12

The Unilift AP12 pump is a single-stage submersible pump designed for pumping drainage water.

The pump is suitable for these applications:

- groundwater lowering
- pumping in drainage collecting wells
- pumping in surface water collecting wells with inflow from roof gutters, shafts, tunnels, etc.
- emptying ponds, tanks, etc.

Maximum particle size: 0.4".

Liquid temperature range: 32 °F to 131 °F.

Approvals

Operation

The pump can be used for automatic as well as manual operation and can be installed in a permanent installation or used as a portable pump.

To enable automatic operation the pump can be fitted with a float switch or it can be connected to separate level switch and control box for automatic on/off operation.

Pump sleeve and housing

The stainless steel pump sleeve is made in one piece and equipped with an insulated carrying handle. The suction strainer is clipped on to the pump housing for easy removal in connection with maintenance. The strainer prevents the passage of large solids and ensures a slow flow into the pump. As a result, most impurities are prevented from entering the pump.

The stainless steel pump housing is fitted with an internal riser pipe ensuring high efficiency.

The riser pipe has a number of holes enabling efficient cooling of the motor during operation. The cable entry is of the socket and plug connection type for quick and easy dismantling.

Discharge port

All Unilift AP12 pumps have a threaded vertical discharge port.

Unilift AP12.40: 1.5" NPT.

Unilift AP12.50: 2.0" NPT.

Shaft and bearings

The stainless steel shaft rotates in maintenance-free prelubricated ball bearings.

Impeller

The stainless steel impeller is a semi-open impeller with L-shaped blades and a clearance of 0.4". The blades are curved backwards to reduce any harmful effect from solid particles and to minimise power consumption.

Fig. 12 Impeller, Unilift AP12

Shaft seal

The shaft seal is a combination of a mechanical bellows shaft seal and a lip seal with 2 fl.oz. oil between. Seal faces are made of silicone carbide.

G10113

TM00 5477 0895

Motor

The motor is a single- or three-phase asynchronous dry-rotor motor.

Enclosure class: IP68

Insulation class: F (311 °F)

Cable type: SJOW-A.

Single-phase motors have built-in thermal protection.

Adjustment of cable length for float switch

The difference in level between start and stop can be adjusted by changing the free cable length between the float switch and the pump handle.

- Increasing the free cable length will result in fewer starts/stops and a large difference in level.
- Reducing the free cable length will result in more frequent starts/stops and a small difference in level.

In order for the float switch to start and stop the pump, the free cable length must be min. 4". When adjusting the free cable end, make sure that the suction strainer is always covered by water.

Materials

Component	Material	DIN W.-Nr.	AISI
Pump housing	Stainless steel	1.4301	304
Riser pipe	Stainless steel	1.4301	304
Impeller	Stainless steel	1.4301	304
Pump sleeve	Stainless steel	1.4401	316
Pump shaft - wet end	Stainless steel	1.4301	304
Bearings	Heavy-duty prelubricated ball bearings		
O-rings	NBR rubber		
Screws	Stainless steel	1.4301	304
Oil	Shell Ondina 15, non-toxic		

Selection

The flow velocity through the discharge pipe must be minimum 2.3 ft/s to ensure self-cleaning.

Example: Schedule 40 PVC discharge pipe with an inner diameter of 1.61" requires a minimum flow velocity of approximately 15 gpm (AP12.40).

Schedule 40 PVC discharge pipe with an inner diameter of 2.067" requires a minimum flow velocity of approximately 24 gpm (AP12.50).

TM04 3035 3508

The overview is only intended as a guide. Grundfos is not liable for installations not complying with the overview.

Note: If a non-return valve is used, the pressure drop in the valve is approximately 0.6 ft head which must be subtracted from the vertical pipe lengths.

The vertical height of the discharge pipe should be measured from the pump stop level.

Unilift AP35

Product description

Fig. 15 Unilift AP35

The Unilift AP35 pump is a single-stage, submersible pump designed for pumping drainage water and effluent. The pump is suitable for these applications:

- groundwater lowering
- pumping in drainage collecting tanks
- pumping in surface water collecting tanks with inflow from roof gutters, shafts, tunnels, etc.
- emptying of ponds, tanks, etc.
- pumping of fibre-containing wastewater from laundries and industries
- pumping of domestic wastewater without discharge from water closets.

Maximum particle size: 1.4"

Liquid temperature range: 32 °F to 131 °F.

Approvals

Operation

The pump can be used for automatic as well as manual operation and can be installed in a permanent installation or used as a portable pump.

To enable automatic operation the pump can be fitted with a float switch or it can be connected to separate level switch and control box for automatic on/off operation.

Pump sleeve and housing

The stainless steel pump sleeve is made in one piece and equipped with an insulated carrying handle.

The suction strainer is clipped on to the pump housing for easy removal in connection with maintenance. The strainer prevents the passage of large solids and ensures a slow flow into the pump.

The stainless steel pump housing is fitted with an internal riser pipe ensuring high efficiency. The riser pipe has a number of holes enabling efficient cooling of the motor during operation. The cable entry is of the socket and plug connection type, allowing for quick and easy dismantling.

Discharge port

All Unilift AP35 pumps have a threaded 1.5 NPT vertical discharge port.

Shaft and bearings

The stainless steel shaft rotates in maintenance-free prelubricated ball bearings.

Impeller

The stainless steel impeller is a vortex impeller with L-shaped blades and a clearance of 1.38" in the pump housing. The blades are curved backwards to reduce any harmful effect from solid particles and to minimise power consumption. The impeller has a protective cap to prevent the deposit of long-fibred material.

Fig. 16 Impeller, Unilift AP35

Shaft seal

The shaft seal is a combination of a mechanical, bellows shaft seal and a lip seal with 2 fl.oz. oil between. Seal faces are made of silicone carbide.

GR115

TM00 5478 0895

Motor cable

The motor is a single- or three-phase asynchronous dry-rotor motor.

Enclosure class: IP68

Insulation class: F (311 °F)

Cable typea: SJOW-A.

Single-phase motors have built-in thermal protection.

Adjustment of cable length for float switch

The difference in level between start and stop can be adjusted by changing the free cable length between the float switch and the pump handle.

- Increasing the free cable length will result in fewer starts/stops and a large difference in level.
- Reducing the free cable length will result in more frequent starts/stops and a small difference in level.

In order for the float switch to start and stop the pump, the free cable length must be min. 4". When adjusting the free cable end, make sure that the suction strainer is always covered by water.

Unilift AP35B

Product description

TM03 8260 0907

Fig. 19 Unilift AP35B

The Unilift AP35B pump is a single-stage submersible pump designed for pumping effluent.

The pump is suitable for these applications:

- groundwater lowering
- pumping in drainage collecting tanks
- pumping in surface water collecting tanks with inflow from roof gutters, shafts, tunnels, etc.
- emptying of ponds, tanks, etc.
- pumping of fibre-containing effluent from laundries and industries
- pumping of domestic effluent from septic tanks and sludge treating systems
- pumping of domestic effluent without discharge from water closets.

Maximum particle size: 1.4"

Liquid temperature range: 32 °F to 104 °F.

Approvals

Operation

The pump can be used for automatic as well as manual operation and can be installed in a permanent installation or used as a portable pump.

To enable automatic operation the pump can be fitted with a float switch or it can be connected to separate level switch and control box for automatic on/off operation.

Pump housing

Pump housing with an outstanding design for submersible wastewater pumps, resulting in a high head.

The pump housing is made of a steel tube with a smooth surface and a hydraulically correct shape ensuring free passage of particles.

Ring stand, pump inlet and pump housing are fastened to the motor by means of four springs enabling quick and easy dismantling.

Discharge port

All Unilift AP35B pumps have a threaded 2" NPT horizontal discharge port.

Shaft and bearings

The stainless steel shaft rotates in maintenance-free prelubricated ball bearings.

Impeller

The stainless steel impeller is a vortex impeller with L-shaped blades and a clearance of 1.4" in the pump housing. The blades are curved backwards to reduce any harmful effect from solid particles and to minimize power consumption. The impeller has a protective cap to prevent the deposit of long-fibered material.

Shaft seal

The shaft seal is a combination of a mechanical, bellows shaft seal and a lip seal with 2.7 fl.oz. oil between. Seal faces are made of silicone carbide.

Motor cable

The motor is a single- or three-phase asynchronous dry-rotor motor.

Enclosure class: IP68

Insulation class: F (311 °F)

Cable type: SJOW-A.

Single-phase motors have built-in thermal protection.

Adjustment of cable length for float switch

The difference in level between start and stop can be adjusted by changing the free cable length between the float switch and the pump handle.

- Increasing the free cable length will result in fewer starts/stops and a large difference in level.
- Reducing the free cable length will result in more frequent starts/stops and a small difference in level.

In order for the float switch to start and stop the pump, the free cable length must be min. 4". When adjusting the free cable end, make sure that the pump housing is always covered by water.

Intermittent operation

Pumps with float switch are suitable for intermittent operation.

The pump is allowed to run for maximum 5 minutes per 30 minutes without the motor being submerged in the liquid.

Continuous operation

During continuous operation, the pump must always be completely covered by the pumped liquid.

The pump is suitable for these applications:

- groundwater lowering
- pumping in drainage collecting tanks
- pumping in surface water collecting tanks with inflow from roof gutters, shafts, tunnels, etc.
- emptying of ponds, tanks, etc.
- pumping of fibre-containing effluent from laundries and industries
- pumping of domestic effluent from septic tanks and sludge treating systems
- pumping of domestic effluent without discharge from water closets.

Maximum particle size: 2.0".

Liquid temperature range: 32 °F to 104 °F.

Approvals

Operation

The pump can be used for automatic as well as manual operation and can be installed in a permanent installation or used as a portable pump.

To enable automatic operation the pump can be fitted with a float switch or it can be connected to separate level switch and control box for automatic on/off operation.

Pump housing

Pump housing with an outstanding design for submersible wastewater pumps resulting in a high head.

The pump housing is made of a steel tube with a smooth surface and a hydraulically correct shape ensuring free passage of particles.

Base, pump inlet and pump housing are fastened to the motor by means of four springs enabling quick and easy dismantling.

Discharge port

All Unilift AP50B pumps have a threaded 2" NPT horizontal discharge port.

Shaft and bearings

The stainless steel shaft rotates in maintenance-free prelubricated ball bearings.

Impeller

The stainless steel impeller is a vortex impeller with L-shaped blades and a clearance of 2.0" in the pump housing. The blades are curved backwards to reduce any harmful effect from solid particles and to minimize power consumption. The impeller has a protective cap to prevent the deposit of long-fibered material.

Fig. 28 Impeller, Unilift AP50B

Shaft seal

The shaft seal is a combination of a mechanical, bellows shaft seal and a lip seal with 2.7 fl.oz. oil between. Seal faces are made of silicone carbide.

TM03 8260 0907

TM00 5477 0895

Motor

The motor is a single- or three-phase asynchronous dry-rotor motor.

Enclosure class: IP68

Insulation class: F (311 °F)

Cable type: SJOW-A.

Single-phase motors have built-in thermal protection.

Adjustment of cable length for float switch

The difference in level between start and stop can be adjusted by changing the free cable length between the float switch and the pump handle.

- Increasing the free cable length will result in fewer starts/stops and a large difference in level.
- Reducing the free cable length will result in more frequent starts/stops and a small difference in level.

In order for the float switch to start and stop the pump, the free cable length must be min. 4". When adjusting the free cable end, make sure that the pump housing is always covered by water.

Intermittent operation

Pumps with float switch are suitable for intermittent operation.

The pump is allowed to run for maximum 5 minutes per 30 minutes without the motor being submerged in the liquid.

Continuous operation

During continuous operation, the pump must always be completely covered by the pumped liquid.

Materials

Component	Materials	DIN W.-Nr.	AISI
Pump housing	Stainless steel	1.4301	304
Impeller	Stainless steel	1.4301	304
Washer	Stainless steel	1.4301	304
Protective cap	Novolen 2360 Kx

Spring	Stainless steel	1.4310	
Pump inlet	Stainless steel	1.4301	304
Ring stand	Polycarbonate		
Oil	Shell Ondina 15, non-toxic		

Selection

The flow velocity through the discharge pipe must be minimum 2.3 ft/s to ensure self-cleaning.

Example: Schedule 40 PVC discharge pipe with an inner diameter of 2.067" requires a minimum flow velocity of approximately 24 gpm.

The overview below shows the maximum lengths of combined vertical and horizontal Schedule 40 PVC discharge pipes.

TM04 3039 3508

The overview is only intended as a guide. Grundfos is not liable for installations not complying with the overview.

Note: If a non-return valve is used, the pressure drop in the valve is approximately 0.6 ft head which must be subtracted from the vertical pipe lengths.

The vertical height of the discharge pipe should be measured from the pump stop level.

EF25

Product description

Fig. 37 EF25 pump

Technical data

Performance Range:

- Flow range: 1-28 GPM
- Head: 0-17 ft.

Solids Handling:

- 0.5" spherical solids.

Motor:

- AC induction
 - Oil filled
 - Insulation class: C
 - Automatic thermal reset
- If motor is cut out by the thermal protection, it will cut in again after cooling off.

Operation:

Semi-continuous operation

- If fully submerged: Max. 8 hours in a 24 hour period.

Intermittent operation

- Max. 20 starts per hour - evenly distributed once every 3 minutes.

Liquid temperature limits when fully submerged:

- 40 °F (4.4 °C)
- 120 °F (48.9 °C).

Discharge port:

- 1.25" female NPT and 0.75" adjustable hose fitting (included).

Performance curve

Impeller:

- Vortex.

Installation depth:

- Max. 30 ft below water level.

Approvals:

- CSA-approved
- UL-listed.

Power Cable:

- 8 ft.

96900631	112	7-15	1	120/208/240	9.29	9.73	5.19	16	1.06

Description

Single-phase, simplex motor contactor and control panel.

The Model 112 control panel provides a reliable means of controlling one 120, 208, or 240 VAC single-phase pump in tanks, pump basins, irrigation systems and lifting stations.

Function

Two float switches activate a magnetic motor contactor to turn the pump on and off.

If an alarm condition occurs, an additional alarm float switch will activate the audio/visual alarm system.

Features

- The entire control system (panel and switches) is UL-listed to meet and/or exceed industry safety standards
- Dual safety certification for the United States and Canada
- Standard package includes three Sensor Float[®] float switches with 20 ft cables.
- Complete with step-by-step installation instructions
- Three-year limited warranty.

96900632	122	7-15	1	120/208/240	11.29	11.73	7.19	20	2.16

Description

Single-phase, duplex, alternating pump control panel with override.

The Model 122 control panel is designed to alternately control two 120, 208, or 240 VAC single-phase pumps in water and sewage installations.

Common applications include tanks, pump basins, irrigation systems and lifting stations.

Function

The alternating action equalizes pump wear. In addition to the alternating pump control, this system provides override control, should either pump fail).

If an alarm condition occurs, an alarm switch will activate the audio/visual alarm system.

Features

- The entire control system (panel and switches) is UL-listed to meet and/or exceed industry safety standards
- Dual safety certification for the United States and Canada
- Standard package includes three Sensor Float[®] float switches with 20 ft cables.
- Complete with step-by-step installation instructions
- Three-year limited warranty.

96900636	IFS1	7-15	1	120/208/240	9.29	11.73	5.19	20	2.16

Description

The Installer Friendly Series[®], single-phase, simplex is a demand dose or timed dose, float controlled system.

The IFS simplex control panel is designed to control one 120, 208, 240 VAC single-phase pump in water and sewage installations.

Common applications include tanks, pump basins, irrigation systems and lifting stations.

The IFS control panel has an easy-to-use touch pad with display on the inner door for programming and system monitoring.

The panel configuration can be easily converted in the field to either a timed dose or demand dose control system.

Features

- The entire control system (panel and switches) is UL-listed to meet and/or exceed industry safety standards
- Dual safety certification for the United States and Canada
- Standard package includes:
Demand Dose three Sensor Float[®] float switches with 20 ft cables.
Timed Dose two Sensor Float[®] float switches with 20 ft cables.
- Complete with step-by-step installation instructions
- Three-year limited warranty.

					A	B	C		
96001042	TA1	5.0	1	120	4.07	6.16	2.66	4	0.15

Description

Tank Alert® I is an easy-to-install, liquid level alarm system for indoor use.

This alarm system monitors liquid levels in lifting stations, pump basins, sewage tanks, agricultural storage tanks, and other non-potable water applications.

Function

The Tank Alert® I alarm system can serve as a high- or low-level alarm depending on the float switch model used.

The alarm horn will sound when a critically high liquid level occurs. The horn can be turned off, but the warning light will remain on until the condition has been remedied.

A green "power on" light indicates power to the alarm panel.

Features

- NEMA 1 enclosure, designed for easy installation, rated for indoor use.
- Red "WARNING LIGHT", green "POWER ON" light, alarm "TEST" switch, and "HORN SILENCE" switch.
- Alarm horn will sound at 86 dB at 10 ft (3 m) distance.
- Can be used with any UL-listed/-recognized switching mechanism rated to include 1 Amp, 12 VAC load.
- Alarm system (when installed on a separate circuit) operating even if the power to the pump fails.
- Complete package includes standard Sensor Float® float switch with 15 ft (4.57 m) cable and mounting clamp. Other cable lengths are available.
- Switching mechanism operates on low voltage and is isolated from the power line to reduce the risk of shock.
- UL-listed.
- CSA-certified.
- Three-year limited warranty.

96001043	TA4X	5.0	1	120	5.61	8.47	5.27	4	0.15

Description

Tank Alert® 4X is an easy-to-install liquid level alarm system which has a NEMA 4X enclosure for indoor or outdoor use.

This alarm system monitors liquid levels in lifting stations, pump basins, sewage tanks, agricultural storage tanks, and other non-potable water applications.

Function

The Tank Alert® 4X alarm system can serve as a high- or low-level alarm depending on the float switch model used.

The stainless steel alarm horn will sound and the red beacon will illuminate when a critically high liquid level occurs.

Features

- NEMA 4X enclosure rated for indoor or outdoor use.
- Automatic alarm reset and alarm test/normal/silence switch.
- Alarm system (when installed on separate circuit) operating even if the power to the pump fails.
- Complete package includes standard Sensor Float® float switch with 15 ft (4.57 m) cable and mounting clamp. Other cable lengths are available.
- UL/CUL-listed.
- Three-year limited warranty.

Tank Alert® AB

					A	B	C		
96901182	TAA8	2.4	1	120	4.05	6.86	2.37	4	0.15

Description

Tank Alert® AB is an easy-to-install liquid level alarm system with auto-reset and battery backup features for indoor use.

This alarm system monitors liquid levels in lifting stations, pump basins, sewage tanks, agricultural storage tanks, and other non-potable water applications.

Function

The Tank Alert® AB alarm system can serve as a high- or low-level alarm depending on the float switch model used.

The alarm horn will sound when a critically high liquid level occurs. The horn can be turned off, but the alarm light will remain on until the condition has been remedied. Once the condition is cleared, the alarm will automatically reset.

A green "POWER ON" light indicates 120 VAC primary power to the alarm. Low-battery chirp function will indicate when battery should be replaced.

Features

- NEMA 1 enclosure, designed for easy installation, rated for indoor use.
- Automatic alarm reset.
- Red "ALARM" light and green "POWER ON" light, alarm "TEST" switch, and horn "SILENCE" switch.
- Alarm horn will sound at 87 dB at 10 ft (3 m) distance.
- Can be used with any UL-listed/-recognized switching mechanism rated to include 1 Amp, 9 VDC load.
- If primary power fails, the alarm system will continue functioning due to battery backup feature. (Battery not included.)
- Complete package includes standard SJE SignalMaster® float switch with 15 ft (4.57 m) cable and mounting clamp. Other cable lengths are available.
- Switching mechanism operates on low voltage and is isolated from the power to the pump to reduce the risk of shock.
- Low battery chirp.
- Easy access battery compartment.
- External terminal block for easy float switch installation.
- CSA-certified.
- UL-listed.
- Three-year limited warranty.

7. Pump and system sizing instructions

Pump and system sizing instructions

The information needed and steps required to properly size a wastewater pump and pumping system are listed below:

1. System capacity (GPM required)
2. Total dynamic head
3. Size of solids
4. Pump selection
5. Basin size
6. Simplex or duplex system

The following pages explain how this information is obtained and used to properly size the pump and pumping system.

1. System capacity

System capacity is calculated in US gallons per minute (GPM).

The best method to determine this figure is through the "Fixture unit" method. Proceed in this way:

A. Count the water fixtures (faucets, showers, water closets and other draw-off points) in the building and their unit values as shown in the chart on page 5.

B. Refer to the graph below to determine GPM.

Note: It must also be determined if there is a liquid velocity of at least 2 ft per second through the pipe to carry the solids without clogging. This is ensured if the flow rate is at least:

9	GPM	through a	1.25" pipe
13	GPM	through a	1.5" pipe
21	GPM	through a	2" pipe
30	GPM	through a	2.5" pipe
46	GPM	through a	3" pipe
MINIMUM FLOW RATE REQUIRED			

Fixture unit values

Fixture unit	Qty.	Total	
Bathroom group: Wash basin, bathtub or shower and (direct flush) water closet	8		
Bathroom group: Wash basin, bathtub or shower and (flush tank) water closet	6		
Bathtub with 1.5" trap	2		
Bathtub with 2" trap	3		
Bidet with 1.5" trap	3		
Dental unit or cuspidor	1		
Drinking fountain	1/2		
Dishwasher (non-commercial)	2		
Kitchen sink, domestic	2		
Kitchen sink, domestic with garbage disposal	3		
Wash basin with 1.5" plug	1		
Wash basin (barber or beauty shop)	2		
Laundry tray, two-compartment	2		
Shower stall	2		
Shower (group) per head	3		
Sink (direct flush valve)	8		
Sink (service type with floor drain)	3		
Sink (scullery)	4		
Sink, surgery	3		
Urinal (with flush valve)	8		
Urinal (with flush tank)	4		
Water closet (with flush valve)	8		
Water closet (with flush tank)	4		
Swimming pool (per 1000 gal capacity)	1		
Water softener (domestic)	1		
Washing machine	2		
Unlisted fixture with 1.25" trap size	3		
Unlisted fixture with 1.5" trap size	4		
Unlisted fixture with 2" trap size	5		
Unlisted fixture with 2.5" trap size	6		
Unlisted fixture with 3" trap size	4		
Unlisted fixture with 4" trap size	2		
		Total fixture units =	

System capacity based on total value of fixture units

TM04 2425 2508

2. Total dynamic head

Dynamic head is expressed in feet of head (ft H₂O).

Total dynamic head is a combination of static head and friction loss:

A. Static head

The actual vertical distance of "lift" in feet from the minimum water level in the basin to the highest point in the discharge piping.

Fig. 55 Illustration of static head for an ejector basin with pump and piping

B. Friction loss

Friction losses are caused by pumping the solids/liquids through the various piping and fittings.

Every foot of pipe and every valve or fitting is rated for various friction losses at a given rate of capacity (GPM).

Use the figure above and the friction loss tables below to determine the friction loss.

Table A

Friction losses for fittings (equivalent feet of piping):

Nominal pipe diameter	90 ° elbow	45 ° elbow	Tee (through-flow)	Tee (branch-flow)	Swing check valve	Gate valve (open)
1.25"	3.5	1.8	2.3	6.9	11.5	0.9
1.5"	4.0	2.2	2.7	8.1	13.4	1.1
2"	5.2	2.8	3.5	10.3	17.2	1.4
2.5"	6.2	3.3	4.1	12.3	20.6	1.7
3"	7.7	4.1	5.1	15.3	25.5	2.0

Table B

Friction losses for pipes (per 100 feet of piping):

GPM	1.25" diameter		1.5" diameter		2" diameter		2.5" diameter		3" diameter	
	Plastic	Steel*	Plastic	Steel*	Plastic	Steel*	Plastic	Steel*	Plastic	Steel*
4	0.34	0.35								
6	0.71	0.72	0.33							
8	1.19	1.2	.056	0.57						
10	1.78	1.74	0.83	0.85						
12	2.48	2.45	1.16	1.18	0.34	0.35				
14	3.29	3.24	1.54	1.51	0.45	0.46				
16	4.21	4.15	1.97	1.93	0.58	0.59				
18	5.25	5.17	2.41	2.40	0.72	0.73				
20	6.42	6.31	2.96	2.92	0.88	0.88				
25	10.39	9.61	4.80	4.80	1.38	1.39				
30	13.60	13.00	6.27	6.23	1.81	1.82	0.75	0.77		
35	19.20	18.20	8.82	8.82	2.40	2.40	1.01	0.99		
40			10.70	10.80	3.12	3.10	1.28	1.30		
45			14.00	14.00	3.80	3.80	1.50	1.60	0.55	0.56
50			16.50	16.50	4.70	4.70	1.90	1.90	0.66	0.68
60					6.50	6.60	2.70	2.70	0.94	0.91
70					8.60	8.80	3.70	3.60	1.20	1.20
80					11.10	11.40	4.70	4.60	1.60	1.60
90					13.80	14.30	5.80	5.80	2.00	2.00
100					16.80	17.50	7.10	7.10	2.40	2.40
125							10.90	10.90	3.70	3.60
150							15.90	15.90	5.20	5.10
175									6.90	6.90

* Steel piping based on Schedule 40 pipe.

Friction loss worksheet

Fittings		
Diameter of fittings _____	From table "A"	Equals this pipe length
# of 90 ° elbows _____	x Each _____	= _____ ft
# of 45 ° elbows _____	x Each _____	= _____ ft
# of through-flow tees _____	x Each _____	= _____ ft
# of branch-flow tees _____	x Each _____	= _____ ft
# of swing check valves _____	x Each _____	= _____ ft
# of gate valves _____	x Each _____	= _____ ft
	Feet of pipe equivalent	_____ ft
		+
Piping:	Feet of pipe actual	_____ ft
Diameter of pipe _____	Total feet of pipe	= _____ ft
	Friction loss (from table "B")	<input style="width: 100px;" type="text"/>

Static head		_____ feet
Friction loss	+	_____ feet
Total dynamic head calculated	=	_____ feet

3. Size of solids

If the building has a water closet of any kind, it will pass 2" solids and require a sewage pump. If it does not have a water closet, it will only need to pass at least 0.75" or smaller solids, and will require an effluent pump.

4. Pump selection

Proceed as follows:

1. Go back to steps 1, 2 and 3 and find this information:
 - capacity (GPM)
 - total dynamic head required
 - solids handling requirements.
2. refer to the pump performance curves
3. find the best pump for the application
4. select the smallest pump that meets the capacity and head requirements and can pass the required solids size. (See performance curves in this product guide).

5. Basin size

To determine the proper basin size, refer to the required capacity of the system. Convert this to the volume the pump must be able to pump out of the basin during each cycle ("pumpable volume", see figure below) using this formula:

$$\text{GPM} \times \text{run time} = \text{volume}$$

The run time must be at least two minutes to ensure against short cycling (which would greatly reduce the service life of the pump). Therefore, if the flow rate is 50 GPM, the pumpable volume required in the basin must be 100 gallons.

GPM	x	Run time [mins.]	=	Volume [gals]
50	x	2	=	100

Referring to the figure below and the table on the following page, select a basin diameter and float switch free cable length that will guarantee a sufficient pumpable volume. Make sure that these requirements are fulfilled:

- The basin must be deep and wide enough to allow space for the ON/OFF range of the float switch to move freely.
- The bottom of the basin inlet must be at least 24" above the bottom of the basin.
- See descriptions of the individual pumps for water level required above the pump (submergence).

Fig. 56 Schematic drawing of ejector basin with pump, piping and float switch

Approximate pumpable volume (in gallons) for various combinations of basin diameter and float switch free cable lengths.

Basin diameter	Free cable length of float switch [inches]										
	OFF 3.5	6	8	10	12	14	16	18	20	22	24
ON	5.5	10	12	16	18	22	25	28	30	32	36
Basin diameter	Approximate pumpable volume [gallons]										
18"	6	11	13	17	20						
24"	11	20	23	29	35	41	47				
30"	17	31	37	46	55	64	73				
36"	24	44	53	66	79	93	106	123	132	145	159
48"	43	78	94	117	141	164	188	219	235	258	282
60"	67	122	147	184	220	257	294	343	367	404	440
72"	97	176	211	264	317	370	423	493	529	581	634

The values are approximate only. Volume may differ slightly due to basin construction.

6. Simplex or duplex System

Local plumbing codes will often determine whether a wastewater pumping system must be duplex (two pumps), or whether a simplex system (one pump) is sufficient. Most commercial applications are of the duplex type, however - not necessarily for the increased capacity offered by two pumps, but more for the standby safety factor that many municipalities require (public health concerns). In most residential installations, a simplex system is adequate - but be sure to check the local plumbing codes.

Additional information on pipe volume and flow velocity:

Storage of water in pipes of various sizes

Pipe size [inches]	Volume [gallons per foot]	Pipe size [inches]	Volume [gallons per foot]
1.25	0.06	6	1.4
1.25	0.09	8	2.6
2	0.16	10	4.07
3	0.36	12	5.87
4	0.652		

Minimum flow rate to maintain 2 ft/sec* flow velocity in various pipes

Pipe size [inches]	Minimum flow rate [GPM]	Pipe size [inches]	Minimum flow rate [GPM]
1.25	9	6	180
1.25	13	8	325
2	21	10	500
3	46	12	700
4	80		

* Failure to maintain or exceed this flow velocity will result in clogged pipes. Information is based on Schedule 40 nominal pipe.

8. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

<http://product-selection.grundfos.com>

SIZING enables you to size a pump based on entered data and selection choices.

REPLACEMENT enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

The screenshot shows the Grundfos Product Center website. At the top, there is a navigation bar with the URL 'www.grundfos.us', a 'Login' button, and the text 'Product range: USA | 60 Hz | Language: English (USA) Change settings'. Below this is a main navigation menu with links for 'HOME', 'FIND PRODUCT', 'COMPARE', 'YOUR PROJECTS', 'SAVED ITEMS', and 'HELP'. The main content area is titled 'FIND PRODUCTS AND SOLUTIONS' and features a search bar with a magnifying glass icon and a 'SEARCH' button. Below the search bar are four main categories: 'SIZING' (Enter pump sizing), 'CATALOG' (Product and services), 'REPLACEMENT' (Replace an old pump with a new), and 'LIQUIDS' (Find liquid pump). The 'SIZING' section is expanded, showing a 'QUICK SIZING' form. This form has two columns: 'Enter duty point:' with input fields for 'Flow (Q)*' (with a 'US gpm' dropdown) and 'Head (H)*' (with a 'ft' dropdown); and 'Select what to size by:' with radio buttons for 'Size by application', 'Size by pump design', and 'Size by pump family'. A 'START SIZING' button is located to the right of the 'Select what to size by:' section. At the bottom of the 'QUICK SIZING' section, there is an 'ADVANCED SIZING:' section with two toggle switches: 'Advanced sizing by application' and 'Guided selection'.

CATALOG gives you access to the Grundfos product catalog.

LIQUIDS enables you to find pumps designed for aggressive, flammable or other special liquids.

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items — including complete projects — right on the main page.

Downloads

On the product pages, you can download Installation and Operating Instructions, Data Booklets, Service Instructions, etc. in PDF format.

Subject to alterations.

Grundfos GO

Mobile solution for professionals on the GO!

Grundfos GO is the mobile tool box for professional users on the go. It is the most comprehensive platform for mobile pump control and pump selection including sizing, replacement and documentation. It offers intuitive, handheld assistance and access to Grundfos online tools, and it saves valuable time for reporting and data collection.
