## Digital Dosing

Digital Dosing represents state-of-the-art technology. This patented Grundfos solution sets new standards, including new principles and methods.

### Precise and easy setting

The operator can easily install and set the pump to discharge exactly the quantity of dosing liquid required in the application. Capacity is read on the digital display in GPH, l/h, or ml/h, while icons are used to identify the operation mode.

### Unique technology

A unique drive and microprocessor control ensure that dosing liquids are discharged precisely and with low pulsation even when the pump is operating with high viscosity or degassing liquids. Instead of the conventional stroke length adjustment, the capacity of the DME is regulated by automatic adjustment of the motor speed during the discharge stroke and by fixed suction stroke speed, ensuring optimal and uniform mixing. The capacity of the DMS is regulated by automatic regulation of the stroke frequency.

### Fewer variants to cover all needs

The powerful variable speed motor, a turn-down ratio of 1:1000/1:800 and a complete control interface including

- full pulse control,
- pulse batch control,
- internal timer batch control,
- analog 0/4-20 mA control,
- level control and
- fieldbus communication module

ensure that nine DME pumps cover the range from 0.00066 to 248.3 gallons per hour, up to 261 psi. The switch mode power supply ensures that the same pump is working precisely, irrespective of the power supply (100-240 V; 50-60 Hz).

The DMS version with synchronous motor and a turn-down ratio of 1:100 (consisting of four pump sizes and two control versions) cover the range from 0.0066 to 3.17 GPH. The DMS-A pumps have external pulse, analog 4-20 mA and level control interface; the DMS-B version is without external control interface. The DMS-D is without control and user interface.

The DME and DMS dosing pumps feature diaphragm dosing head with integrated vent valve, suction and discharge ball valves.

The pumps are also fitted with a power cable and plug.

## Capacity range

The maximum capacity is available at any counter pressure within the pump's specified range if it has been calibrated to the actual installation.

## Capacity control, DME

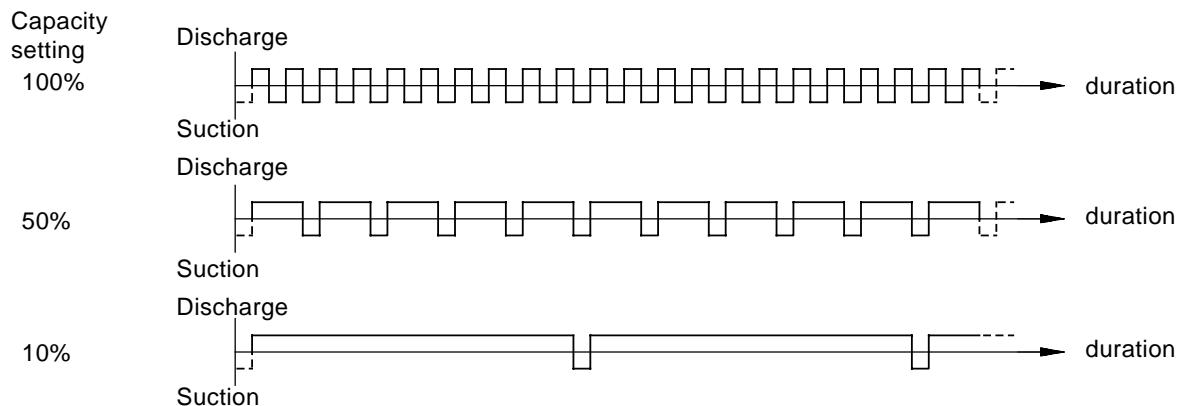

The electronically controlled variable-speed motor of the DME pumps provides optimum control of the stroke speed. As shown in the figure below, the duration of each suction stroke is constant while the duration of each discharge stroke varies according to the capacity set, resulting in optimum discharge flow in any operating situation.

The advantages are as follows:

- The pump is always operating at full stroke length, irrespective of the capacity set, for optimum accuracy, priming and suction.
- A capacity range of 1:1000 (DME 2 to 48) for each pump size.

- A capacity range of 1:800 (DME 60 to 940) for each pump size.
- Even and constant dosing ensuring an optimum mixing ratio at the injection point.
- Significant reduction of pressure surges, preventing mechanical stress on diaphragm, tubes, connections and other dosing parts exposed to leakage and wear.
- The installation is less affected by long suction and discharge lines.
- Easier dosing of highly viscous and gas-containing liquids.

The optimum dosing control shown below takes place in any operating mode.

TM01 8944 0900

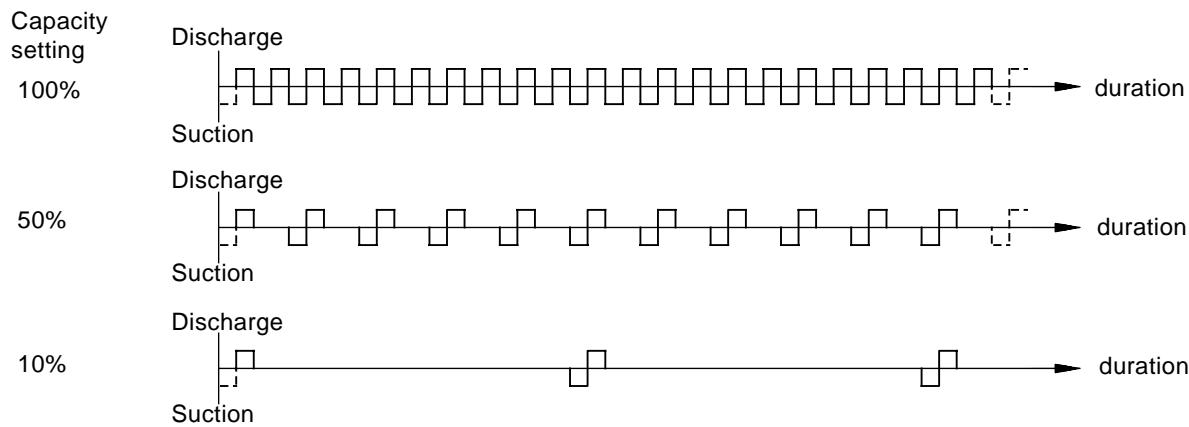

## Capacity control, DMS

The electronically controlled synchronous motor of the DMS offers similar advantages of the DME pumps. As shown in the figure below, the suction and discharge stroke speeds are constant while the stroke frequency varies according to the capacity set.

The sinusoidal movement of the diaphragm offers the following advantages:

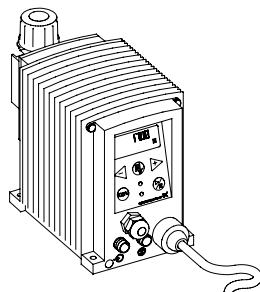

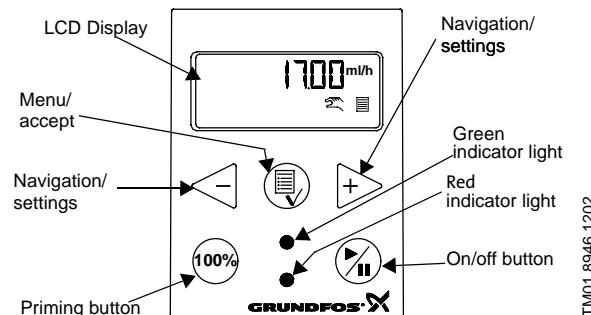

- The pump is always operating at full stroke length, irrespective of the capacity set, for optimum accuracy, priming and suction.

- A capacity range of 1:100 for each pump size.
- Reduction of pressure surges, preventing mechanical stress on diaphragm, tubes, connections and other dosing parts exposed to leakage and wear.
- The installation is less affected by long suction and discharge lines.
- Easier dosing of highly viscous and gas-containing liquids.

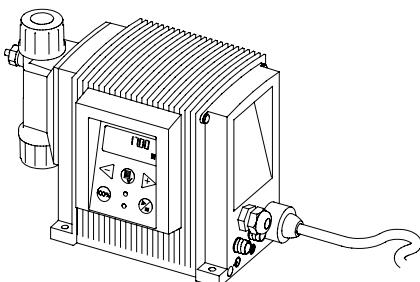

TM01 8945 0900

## Control panel

Control panel fitted to the front.

Control panel fitted to the side (not DMS-B).

### Priming button

The pump control panel incorporates a button. Press this button if the maximum capacity is required over a short period, e.g. during start-up. When the button is released, the pump automatically returns to the previous operating mode.

When the buttons and are pressed simultaneously, the pump can be set to run for a specific number of seconds at maximum capacity. The remaining numbers of seconds will appear in the display. This feature is useful when flushing the pump. The maximum value is 300 seconds.

Press to stop the pump before the set time has passed.

### Indicator lights and alarm output (DME 2 to 48, DMS)

The green and red indicator lights on the pump indicate operation or fault.

In control variant AR, the pump can activate an external alarm signal by means of a built-in alarm relay. The alarm signal is activated by means of an internal potential-free contact.

The functions of the indicator lights and the built-in alarm relay appear from the table below.

Condition	Green LED	Red LED	Display	Alarm output <sup>★1</sup>
Pump running	On	Off	Normal indication	
Pump paused	Flashing	Off	Normal indication	
Pump fault	Off	On	EEPROM	
Supply failure	Off	Off	Off	
Pump running, low chemical level <sup>★2</sup>	On	On	Normal indication	
Empty tank <sup>★2</sup>	Off	On	Normal indication	
Analog signal < 2 mA	Off	On	Normal indication	
The pump is not dosing enough according to the signal from the dosing monitor <sup>★3</sup>	On	On	Normal indication	
More pulses than capacity	On	On	Normal indication	
Overheated	Off	On	MAX TEMP	

<sup>★1</sup> Control variant AR, only.

<sup>★2</sup> Requires connection to level sensors.

<sup>★3</sup> Requires dosing monitor function activated and a dosing monitor device connected to the pump.

# Functions

No detection of motor rotation★4	On	On	ORIGO	

Condition	Green LED	Red LED	Display	Alarm output★1
-----------	-----------	---------	---------	----------------

★1 Control variant AR, only.

★2 Requires connection to level sensors.

★3 Requires activation of the dosing monitoring function and connection to a dosing monitor.

★4 Please contact a Grundfos service centre.

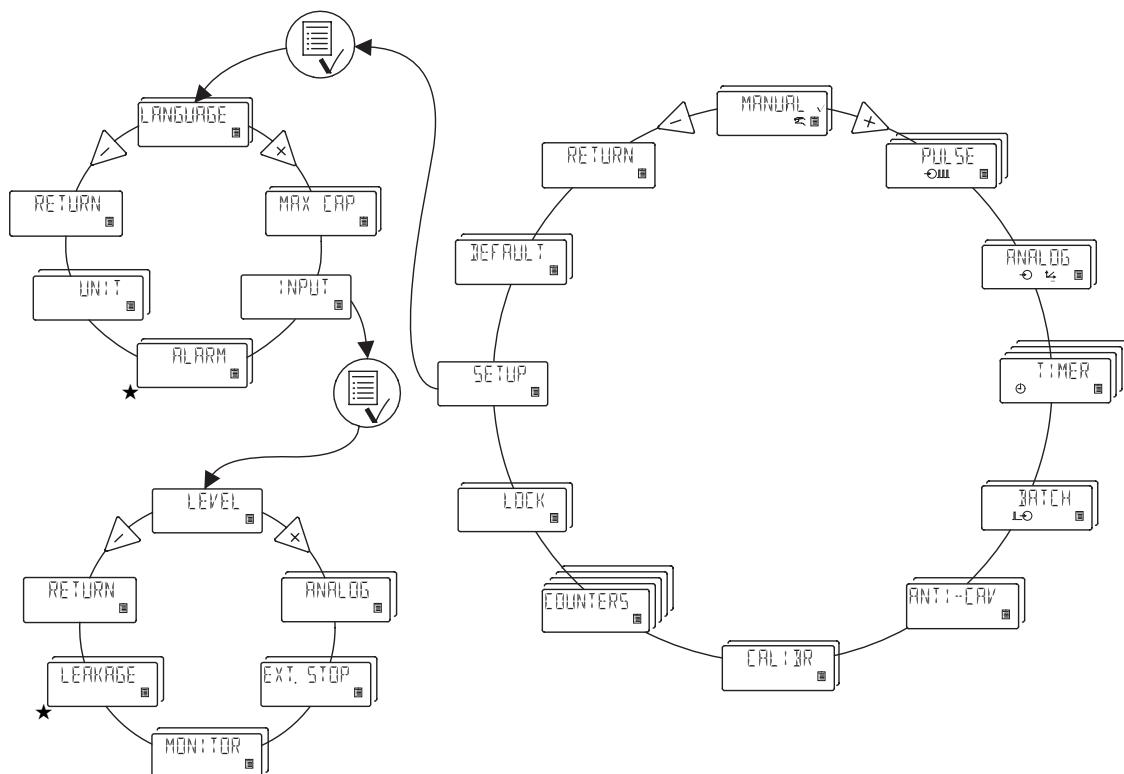

★5 Alarms can be reset  after fault conditions are back to normal.

★6 The pump will make 10 attempts to restart before going into permanent off mode.

## Menu

The DME and DMS dosing pumps feature a user-friendly menu which is activated by pressing the  button. During start-up, all texts will appear in the English language, but other languages can be selected (see page 16).

The example shown below applies only to DME 60 to 940 pumps.

D68se

## Operating modes

### Manual control

The pump is dosing constantly according to the quantity set in l/h or ml/h by means of the buttons  $\leftarrow$  and  $\rightarrow$ . It automatically changes over between the measuring units.

Setting range, DME:

DME	Adjustable Flow Range				
	GPH	to	GPH	ml/h	to
2-18	0.00066	-	0.66 (0.47*)	2.5	- (1.8*)
8-10	0.002	-	1.98 (1.47*)	7.5	- (5.6*)
12-6	0.0032	-	3.17 (2.37*)	12	- (9*)
19-6	0.0049	-	4.88 (3.83*)	18.5	- (14.5*)
48-3	0.0127	-	12.68 (9.77*)	48	- (37*)
60-10	0.0198	-	15.85	75	- 60
150-4	0.0495	-	39.63	187.5	- 150
375-10	0.1238	-	99.06	468.75	- 375
940-4	0.3104	-	248.32	1175	- 940

★The figures in brackets indicate the maximum capacity when the anti-cavitation function is activated. See page 15 for adjusted DME 60 to 940 capacities.

Setting range, DMS:

DMS	Adjustable Flow Range				
	GPH	to	GPH	ml/h	to
2	0.0066	-	0.66	2.5	- 2.5
4	0.0105	-	1.05	40	- 4
8	0.0198	-	1.98	75	- 7.5
12	0.0317	-	3.17	120	- 12

### Pulse control

Applies to DME and DMS-A.

The pump is dosing according to an external pulse signal, e.g. from a water meter.

There is no direct relation between pulses and dosing strokes. The pump automatically calculates its optimal speed to ensure the required quantity is dosed for each pulse. The quantity to be dosed is set in ml/pulse. The pump adjusts its speed and/or stroke frequency according to two factors:

- frequency of external pulses and
- the set quantity per pulse.

Setting range, DME:

DME 2-18:	0.000023 ml/pulse -	5.0 ml/pulse
DME 8-10:	0.000069 ml/pulse -	15.0 ml/pulse
DME 12-6:	0.000111 ml/pulse -	24.0 ml/pulse
DME 19-6:	0.000204 ml/pulse -	37.0 ml/pulse
DME 48-3:	0.000530 ml/pulse -	96.0 ml/pulse
DME 60-10:	0.000625 ml/pulse -	120 ml/pulse
DME 150-4:	0.00156 ml/pulse -	300 ml/pulse
DME 375-10:	0.00392 ml/pulse -	750 ml/pulse
DME 940-4:	0.00980 ml/pulse -	1880 ml/pulse.

Setting range, DMS:

DMS 2:	0.00232 ml/pulse -	50 ml/pulse
DMS 4:	0.00370 ml/pulse -	80 ml/pulse
DMS 8:	0.00695 ml/pulse -	150 ml/pulse
DMS 12:	0.01110 ml/pulse -	240 ml/pulse

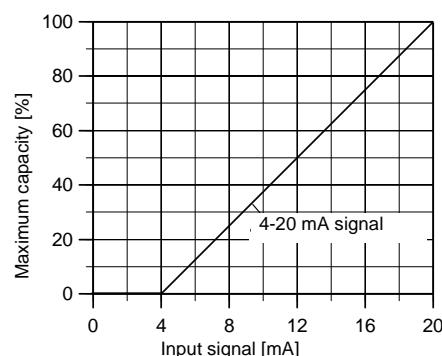

### Analog 4-20 mA control

Applies to DME and DMS-A

The pump is dosing according to an external analog signal. The dosed capacity is proportional to the input value in mA.

4-20 (default):	4 mA = 0%
	20 mA = 100%
20-4:	4 mA = 100%
	20 mA = 0%
0-20:	0 mA = 0%
	20 mA = 100%
20-0:	0 mA = 100%
	20 mA = 0%.

The maximum capacity limitation, see page 15, will influence the capacity. 100% (20 mA) corresponds to the maximum capacity or the set capacity limitation.

TM0182218 0100

## Timer-based batch control

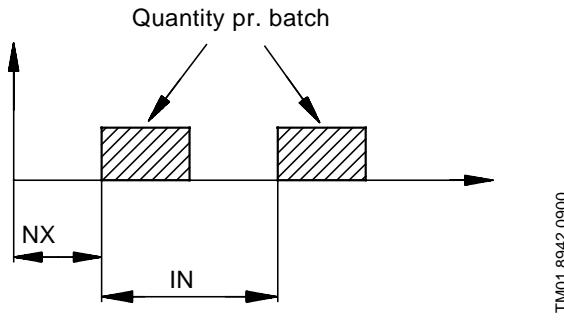

### Applies to DME

The pump is dosing the set quantity in batches at maximum capacity or the set capacity limitation.

The time until the first dosing (NX) and the following sequences (IN) can be set in minutes, hours and days. The maximum time limit is 9 days, 23 hours and 59 minutes (9:23:59).

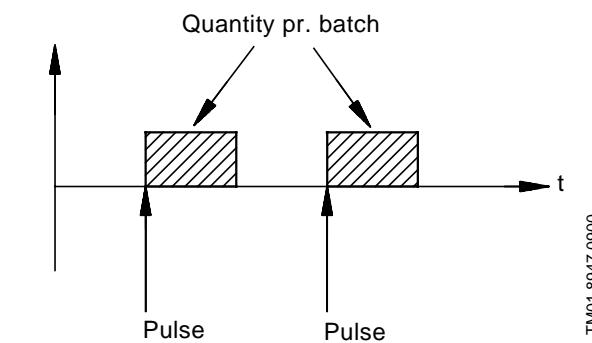

The lowest acceptable value is one minute. IN must be higher than the time required to perform one batch. If IN is lower than the time required, the next batch will be ignored. In case of supply failure, the set dosing quantity, the IN time and the remaining NX time are stored.

When the supply is reconnected, the pump will start up with the NX time at the time of the supply failure. This way the timer cycle will continue, but it will be delayed according to the time of the supply failure. This feature is not available on variant "B" pumps.

### Setting range (applies to DME only):

Timer-based and pulse-based batch control		
DME 2:	0.23 ml/batch 0.00006 G/batch	to 5 l/batch 1.32 G/batch
DME 8:	0.69 ml/batch 0.00018 G/batch	to 15 l/batch 3.96 G/batch
DME 12:	1.11 ml/batch 0.00029 G/batch	to 24 l/batch 6.34 G/batch
DME 19:	2.04 ml/batch 0.00053 G/batch	to 37 l/batch 9.77 G/batch
DME 48:	5.3 ml/batch 0.0014 G/batch	to 96 l/batch 25.4 G/batch
DME 60:	6.25 ml/batch 0.0017 G/batch	to 120 l/batch 31.7 G/batch
DME 150:	15.6 ml/batch 0.0041 G/batch	to 300 l/batch 79.3 G/batch
DME 375:	39.1 ml/batch 0.01 G/batch	to 750 l/batch 198.1 G/batch
DME 940:	97.9 ml/batch 0.025 G/batch	to 1880 l/batch 496.7 G/batch

## Pulse-based batch control

### Applies to DME

The pump is dosing the set quantity in batches at maximum capacity or the set capacity limitation. The quantity is dosed every time the pump receives an external pulse. If the pump receives new pulses before the batch is completed, these pulses will be ignored. However the manually control DME B cannot be controlled externally.

## Anti-cavitation (2 to 48)

### Applies to DME

When this function is selected, the pump extends and smooths its suction stroke, resulting in softer priming.

The anti-cavitation function is used:

- when pumping liquids of high viscosity
- when pumping degassing liquids
- in the case of a long suction tube and
- in the case of a high suction lift.

The maximum capacity is reduced when this function is selected, see table below.

Maximum capacity with anti-cavitation function		
DME 2	0.475 GPH	1.8 l/h
DME 8	1.48 GPH	5.6 l/h
DME 12	2.38 GPH	9 l/h
DME 19	14.5 GPH	14.5 l/h
DME 48	9.77 GPH	37 l/h

## Anti-cavitation (60 to 940)

The pump features an anti-cavitation function. When this function is selected, the pump extends and smoothes its suction stroke, resulting in softer priming.

The anti-cavitation function is used:

- when pumping liquids of high viscosity,
- in the case of a long suction tube and
- in the case of a high suction lift.

Depending on the circumstances, during the suction stroke, the motor speed can be reduced by **75%, 50% or 25%** compared to the normal motor speed during the suction stroke.

The maximum pump capacity is reduced when the anti-cavitation function is selected

## Anti-cav max capacity (DME 60 to 150)

### DME 60 to 940

DME	Max cap.	75%	50%	25%
60 g/h. (l/h)	15.9. (60)	11.9. (45)	7.9. (30)	4.0. (15)
150 g/h. (l/h)	39.6. (150)	29.6. (112)	19.8. (75)	10.0. (38)
375 g/h. (l/h)	99.1. (375)	74.2. (281)	49.7. (188)	24.8. (94)
940 g/h. (l/h)	248.3. (940)	186.2. (705)	124.2. (470)	62.1. (235)

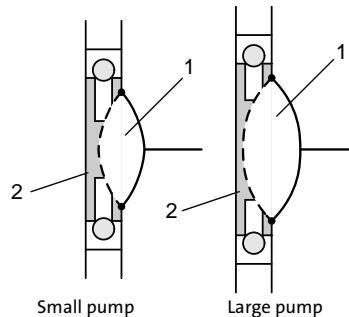

## Maximum capacity limitation

### Applies to DME

This function offers the possibility of reducing the maximum capacity (MAX. CAP). It influences the functions in which the pump is normally operating at maximum capacity. Under normal operating conditions, the pump cannot operate at a capacity higher than the one stated in the display. This does not apply to the priming button.

By means of this function, a large pump can be set to act as a much smaller pump. Together with the 1:1000/1:800 capacity range, the purposes of this function are:

1. To utilize the smooth and even dosing characteristics of the pump at low capacities to achieve
  - improved chemical mixing,
  - improved dosing through long discharge tubes and
  - improved dosing of high-viscous liquids.
2. To improve the dosing of gas-containing liquids: In a large pump, as compared to a small pump, the displaced volume (1) is much larger than the non-displaced volume (2).

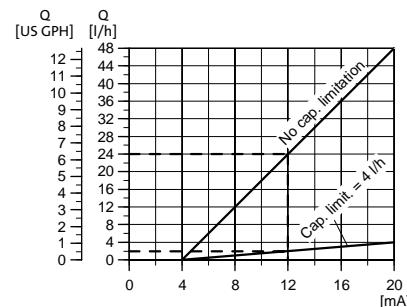

TM02 0158 3301

3. To cover several needs with just one pump size.
4. To adapt the pump to a 4-20 mA signal control with 4 mA corresponding to 0% and 20 mA to the set maximum capacity.

In this way it is possible for instance to use a DME 48 for dosing a very small quantity of liquid without changing the input signal. See example below.

### Example:

A DME 48 receives a 12 mA input signal from a control instrument, resulting in a 50% output (according to the analog curve on page 13) and a capacity of 24 l/h. A new situation occurs where it is only necessary to dose 2 l/h. The maximum capacity limitation is set to 4 l/h. The pump is still receiving a 12 mA signal resulting in a 50% output and a capacity of 2 l/h.

TM02 9942 4604

The maximum capacity limitation will also reduce the pump speed in timer-based batch control, pulse-based batch control and during calibration where the pump is usually operating at maximum capacity.

## Calibration

After start-up, the dosing pumps can be calibrated to the actual installation to ensure that the displayed value (milliliters or liters) is correct. A calibration program in the main menu facilitates this process.

## Counters

The pump can display "non-resettable" counters for:

- **"Quantity"**  
Accumulated dosed quantity in liters or US gallons.
- **"Strokes"**  
Accumulated number of dosing strokes.
- **"Hours"**  
Accumulated number of operating hours (power on).
- **"Power ON"**  
Accumulated number of times the mains supply has been switched on.

## Languages

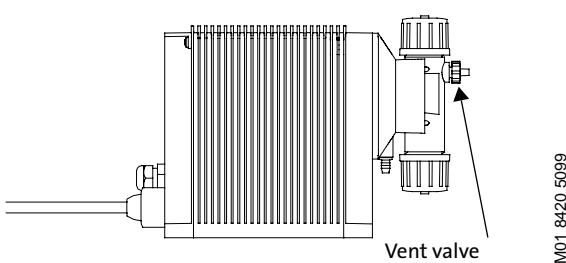

The display text can be displayed in one of the following languages chosen in the set-up menu:

- English
- German
- French
- Italian
- Spanish
- Portuguese
- Dutch
- Swedish
- Finnish
- Danish
- Czech
- Slovak
- Polish
- Russian.

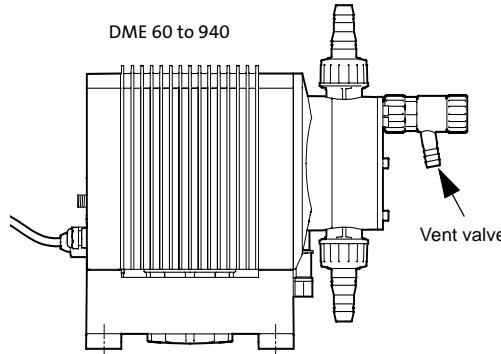

## Integrated venting

The DME and DMS dosing pumps are provided with an integrated vent valve. The valve makes it very easy to prime the pump during start-up:

The vent valve must be connected to the tank by means of 1/4" tubing.

For the larger pumps, the vent valve must be connected to the tank by means of 5/8" ID tubing.

TM02 7066 2503

## Switch-mode power supply

*Applies to DME*

The DME pump is incorporates a switch-mode power supply. This makes the pump independent of variations in supply voltage and frequency. Operating range: 1 x 100-240 V, 50-60 Hz.

## Level control

*Applies to DME-A and DMS-A*

The pump can be connected to a level control unit for monitoring of the chemical level in the tank.

The pump can react to two level signals. The following table shows the pump reactions to the sensor signals:

Level sensors	Pump reaction
Upper sensor activated	<ul style="list-style-type: none"> <li>• Red indicator light is on.</li> <li>• Pump <b>running</b>.</li> <li>• Alarm relay activated.★</li> </ul>
Lower sensor activated	<ul style="list-style-type: none"> <li>• Red indicator light is on.</li> <li>• Pump <b>stopped</b>.</li> <li>• Alarm relay activated.★</li> </ul>

★ Applies to control variant AR

## Bus communication

*Applies to DME*

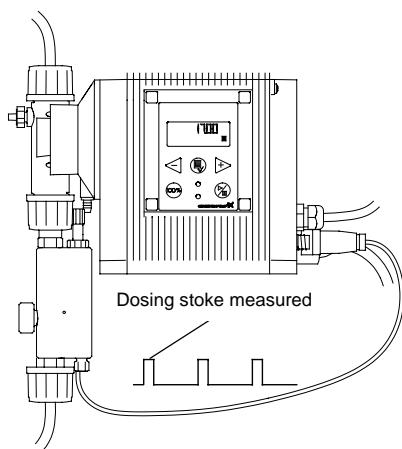

The pump is available with an optional built-in module for bus communication with GENIbus (variant AG, DME 2 to 48 only) or PROFIBUS (variant AP) systems. These modules enable remote monitoring and setting via the fieldbus system. All DME features are available via bus communication. The PROFIBUS GDS-file can be downloaded from [www.grundfos.com/dosing](http://www.grundfos.com/dosing).

## Diaphragm leakage sensor (DME 60 to 940)

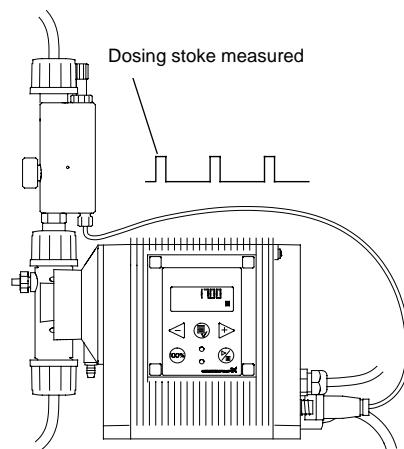

The pump can be fitted with a leak sensor that connects to the drain hole of the pump head. In the event of diaphragm leakage, the sensor will activate the pump's alarm relay.

## Dosing monitoring

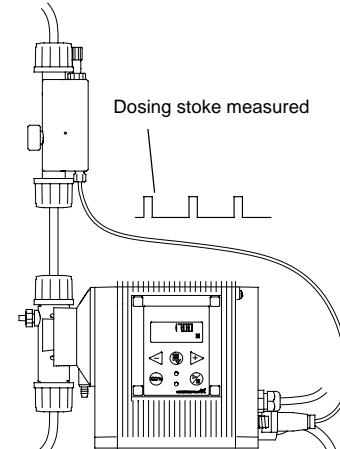

Applies to all DME 2 to 48 and DMS AR

Monitor mounted on suction side  
(DME and DMS)

Monitor mounted on discharge side  
(DMS only)

Monitor mounted in dosing tube.  
In discharge tube: DMS (in-line)  
In suction tube: DME and DMS (in-line)

TM02 2029 3201 - TM02 2030 3201 - TM02 2031 3201

The dosing monitor is designed to monitor the dosing of liquids which may cause gas accumulation in the pump head, thus stopping the dosing process even if the pump is still operating.

For every measured dosing stroke, the dosing monitor gives a pulse signal to the level input so that the pump can compare performed pump strokes (from internal stroke sensor) with externally measured physical strokes (from the dosing monitor). If an external dosing stroke is not measured together with the internal dosing stroke, this is considered a fault that may have been provoked by an empty tank or gas in the dosing head.

When used together with a **DME pump**, the monitor will only operate if it is mounted on the suction side of the pump.

When used together with a **DMS (A, AR) pump**, the monitor will also operate if it is mounted on the discharge side of the pump.

The dosing monitor should be connected to the level input (pins 2 and 3). This input must be configured to dosing monitoring in the pump's setup menu. Consequently, it cannot be used as level input.

Once the input has been set for dosing monitoring and a dosing monitor has been connected and set, the dosing monitoring function will be active.

### Definitions:

- Correct dosing stroke:** A pulse from the dosing monitor corresponds to the internal stroke signal within acceptable time.

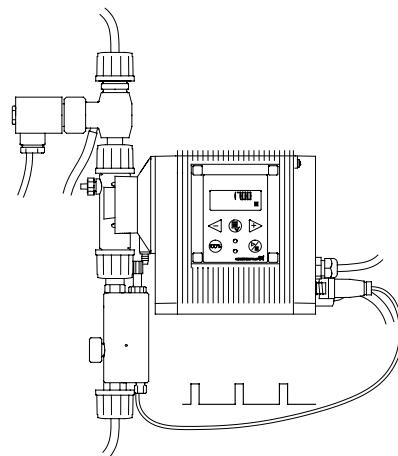

- Incorrect dosing stroke:** There is no pulse from the dosing monitor corresponding to the internal stroke signal within the acceptable time (the pump is not pumping).

### Logic:

If two incorrect dosing strokes are performed, the pump will continue operating, but it will change over to alarm mode, like in case of "low level". The red indicator light will be on and the alarm output, if any, will be activated (variant AR).

For each correct stroke the counter is reset and the alarm output, if any, is deactivated.

### Operation in connection with vent valve:

TM02 2048 4802

It is possible to add a self-acting solution for liquids that cause gas accumulation by using an automatic vent valve. The solution is the dosing monitor with a pump and an alarm output (control variant AR). The alarm output thus activates the vent valve, which will automatically vent gas accumulated in the dosing head. When the dosing head has been vented, the pump will start pumping again, the alarm output will be deactivated and the vent valve will close.

## Control panel lock

It is possible to lock the buttons on the control panel to prevent maloperation of the pump. The locking function can be set to "ON" or "OFF". The default setting is "OFF".

A PIN code must be entered to change from "OFF" to "ON". When "ON" is selected for the first time, "\_\_\_\_\_ will appear in the display. If a code has already been entered, it will appear when an attempt to change to "ON" is made. This code can either be re-entered or changed.

## Units

It is possible to select metric units (liter/milliliter) and US units (gallons).

### Metric measuring units:

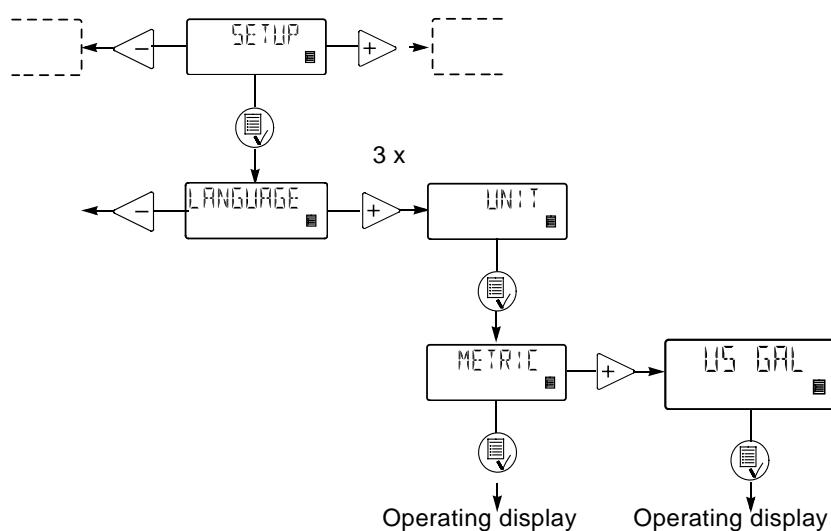

- In manual and analog modes, set the quantity to be dosed in liters per hour (l/h) or milliliters per hour (ml/h).

- In pulse mode, set the quantity to be dosed in ml/pulse. The actual capacity is indicated in liters per hour (l/h) or milliliters per hour (ml/h).
- For calibration, set the quantity to be dosed in ml per 100 strokes.
- In timer and batch modes, set the quantity to be dosed in liters (l) or milliliters (ml).
- Under the "QUANTITY" menu item in the "COUNTERS" menu, the dosed quantity is indicated in liters.

### US measuring units:

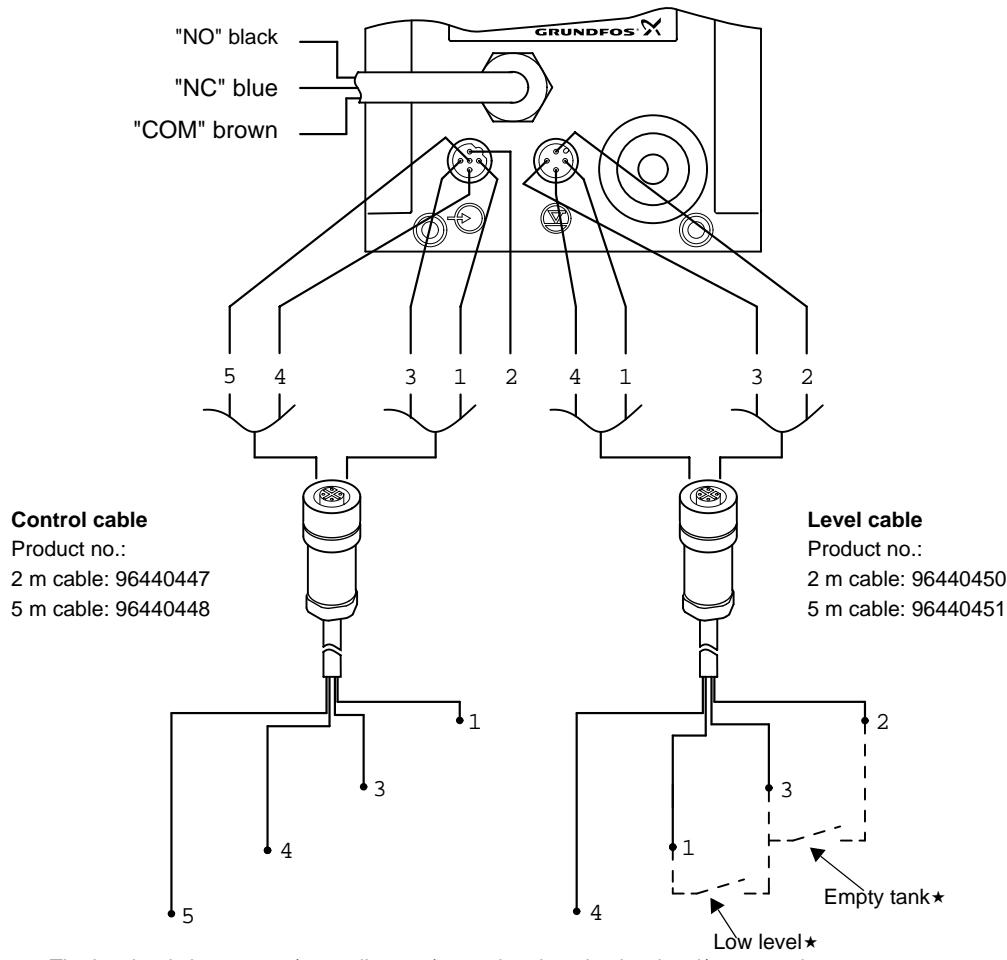

- In manual and analog modes, set the quantity to be dosed in gallons per hour (gph).
- In pulse mode, set the quantity to be dosed in ml/pulse. The actual capacity is shown in gallons per hour (gph).
- For calibration, set the quantity to be dosed in ml per 100 strokes.
- In timer and batch modes, set the quantity to be dosed in gallons.
- Under the "QUANTITY" menu item in the "COUNTERS" menu, the dosed quantity is indicated in gallons (gal).

The drawing below shows all possible settings.

## Wiring diagram, DME 2 to 48 and DMS-A (AR)

See pages 30 and 32 for input/output data.

TM01 8422 5001

### Control input

Number/color	Plug					Description
Function	1/brown	2/white	3/blue	4/black	5/grey	
Manual	2		2			
Pulse	1		1			
Pulse + external on/off	1		1 + 2		2	
Analog★				—	+	mA signal
Analog + external on/off★	2		2	—	+	mA signal
Timer + external on/off	2		2			
Batch	1		1			

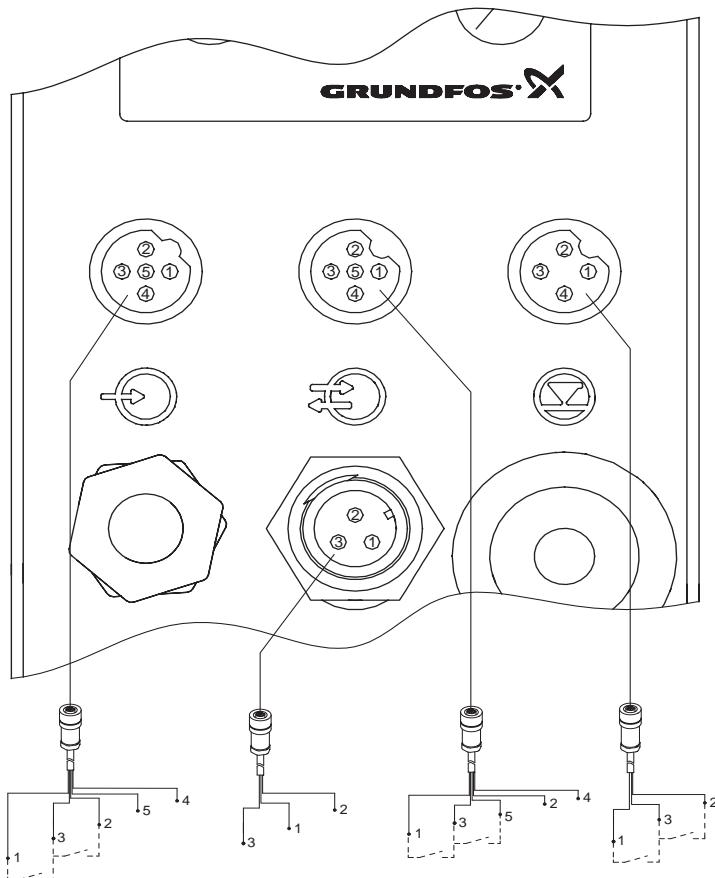

1 = Contact for pulse signal / 2 = Contact for external on/off

★ Pumps in analog mode cannot be connected in series.

### Level input

Number/color	Plug			
Function	1/brown	2/white	3/blue	4/black
Low level			Low level	
		Empty tank	Empty tank	
Low level		Empty tank	Low level + empty tank

### Analog/Pulse/Leakage cable

Product no.:  
2 m cable: 96440447  
5 m cable: 96440448

### Relay cable

Product no.:  
2 m cable: 96534214  
5 m cable: 96534215

### Stop dosing cable

Product no.:  
2 m cable: 96527109  
5 m cable: 96527111

### Level cable

Product no.:  
2 m cable: 96440450  
5 m cable: 96440451

TMO 27069 2503

### Cable 1: Analog, pulse and leakage input

Number/color	1/brown	2/white	3/blue	4/black	5/grey
Function					
Analog input 4-20 mA				(-) 4-20 mA input	(+) 4-20 mA input
Pulse	potential-free		potential-free		
Pulse	5 V			Gnd	
Leakage		potential-free	potential-free		
Leakage	5 V			Gnd	

### Cable 2: Output for alarm relay

Number/color	1/brown	2/white	3/blue
Function			
Alarm relay output	Common	Normally open	Normally closed

### Cable 3: Stop dosing input and dosing monitor or dosing output

Number/color	1/brown	2/white	3/blue	4/black	5/grey
<b>Function</b>					
Stop input	5 V			Gnd	
Stop input	potential-free		potential-free		
Dosing monitor			potential-free		potential-free
Dosing monitor				Gnd	5 V
Dosing output (pump running)		Open collector (NPN)★		Gnd	

★ Open collector (NPN) can be used for a relay or a lamp.

Useful when the load (e.g. a relay) has one side connected to a power supply which is not the same one as connected to the sensor.

When the dosing output is activated, the output provides the Gnd to the load.

Recommended supply: max. 24 VDC.

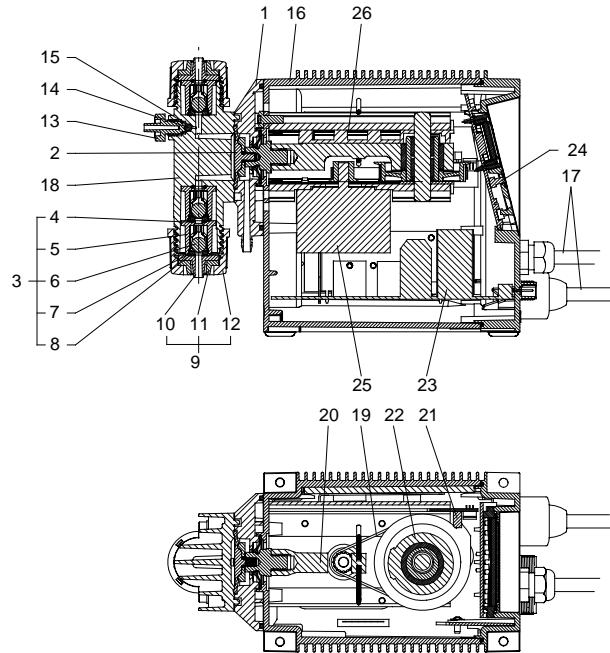

Max. current: 100 mA.

### Cable 4: Level input

Number/color	1/brown	2/white	3/blue	4/black
<b>Function</b>				
Empty tank input	potential-free*		potential-free*	
Empty tank input	5 V			Gnd
Low level input		potential-free*	potential-free*	
Low level input		5 V		Gnd

\*The function for the potential-free contact sets can be chosen from the display (NO = Normally Open and NC = Normally Closed).

## Sectional drawing, DME (2 to 48)

TM01 9994 3600

## Construction

The DME pump is a motor-driven diaphragm dosing pump consisting of the following main parts:

**Dosing head:** Designed with a minimum of clearance space to optimise the priming and deaerating capabilities. The dosing head has built-in valve housings.

**Valves:** Double-ball suction valve and single-ball discharge valve. Spring-loaded valves are available as an option.

**Vent valve:** For priming and deaeration complete with connection for a 1/4" tubing.

**Connections:** Sturdy and easy-to-use connections for various sizes of tubing, pipe thread or pipe cementing.

**Diaphragm:** PTFE-coated, textile-reinforced EPDM diaphragm designed for long life.

**Backplate:** With separation chamber, safety diaphragm and drain hole.

**Drive unit:** With diaphragm connecting rod, crank, belt-drive and stepper motor, all mounted on a sturdy frame.

**Cabinet:** Containing drive unit, electronics, control panel and various electrical connections.

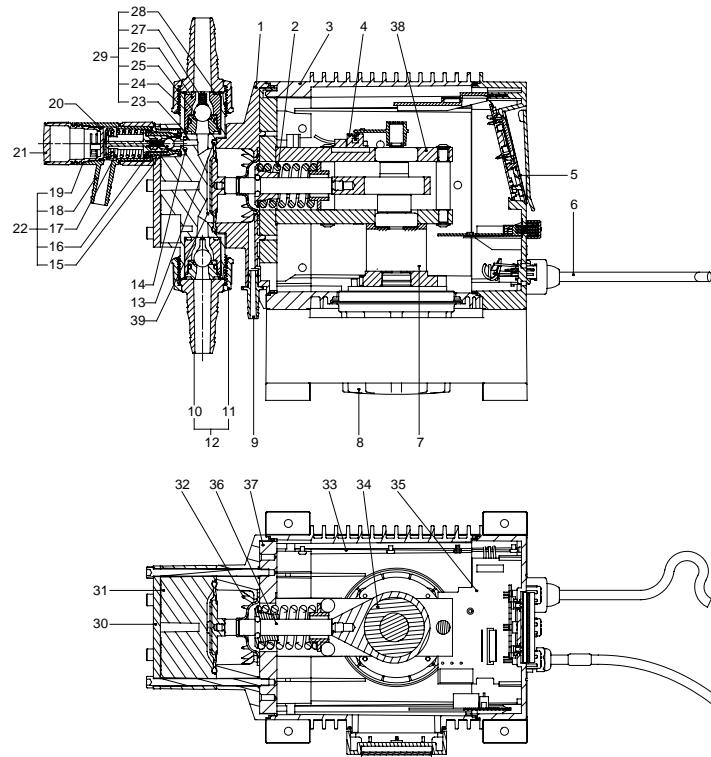

\* The pump can be supplied with spring-loaded valves.  
Spring material: Hastelloy.

The spring is not shown in the sectional drawing.

## Non-standard options

Option	Available with
Spring-loaded check valves	DME, DMS
Profibus	DME
GENibus	DME 2 to 48
PTFE check valves with Ceramic or PTFE balls	DME 2 to 48, DMS
PTFE balls in PP or PVDF check valves	DME 2 to 48, DMS
SS balls in PP or PVDF check valves	DME, DMS
1/2" NPT connections on PP or PVDF pumps	DME 2 to 48, DMS
Metric inlet/discharge connection	DME, DMS
International supply voltages/plug types	DME, DMS
PTFE gaskets	DME 60 to 940
Hastelloy C balls	DME 60 to 940

Please contact the factory for ordering information.

### List of pumped liquids

The resistance table below is intended as a general guide for material resistance (at room temperature), and does not replace testing of the chemicals and pump materials under specific working conditions.

The data shown are based upon information from various sources available, but many factors (purity, temperature, abrasive particles, etc.) may affect the chemical resistance of a given material. Note: Some of the liquids in this table may be toxic, corrosive or hazardous.

Please be careful when handling these liquids.

● Suitable.

★<sup>3</sup> Risk of crystallisation.

○ Limited.

★<sup>4</sup> Reacts violently with water and generates much heat. (Pump should be absolutely dry before dosing sulphuric acid.)

- Not suitable.

★<sup>5</sup> Must be fluoride-free when glass balls are used.

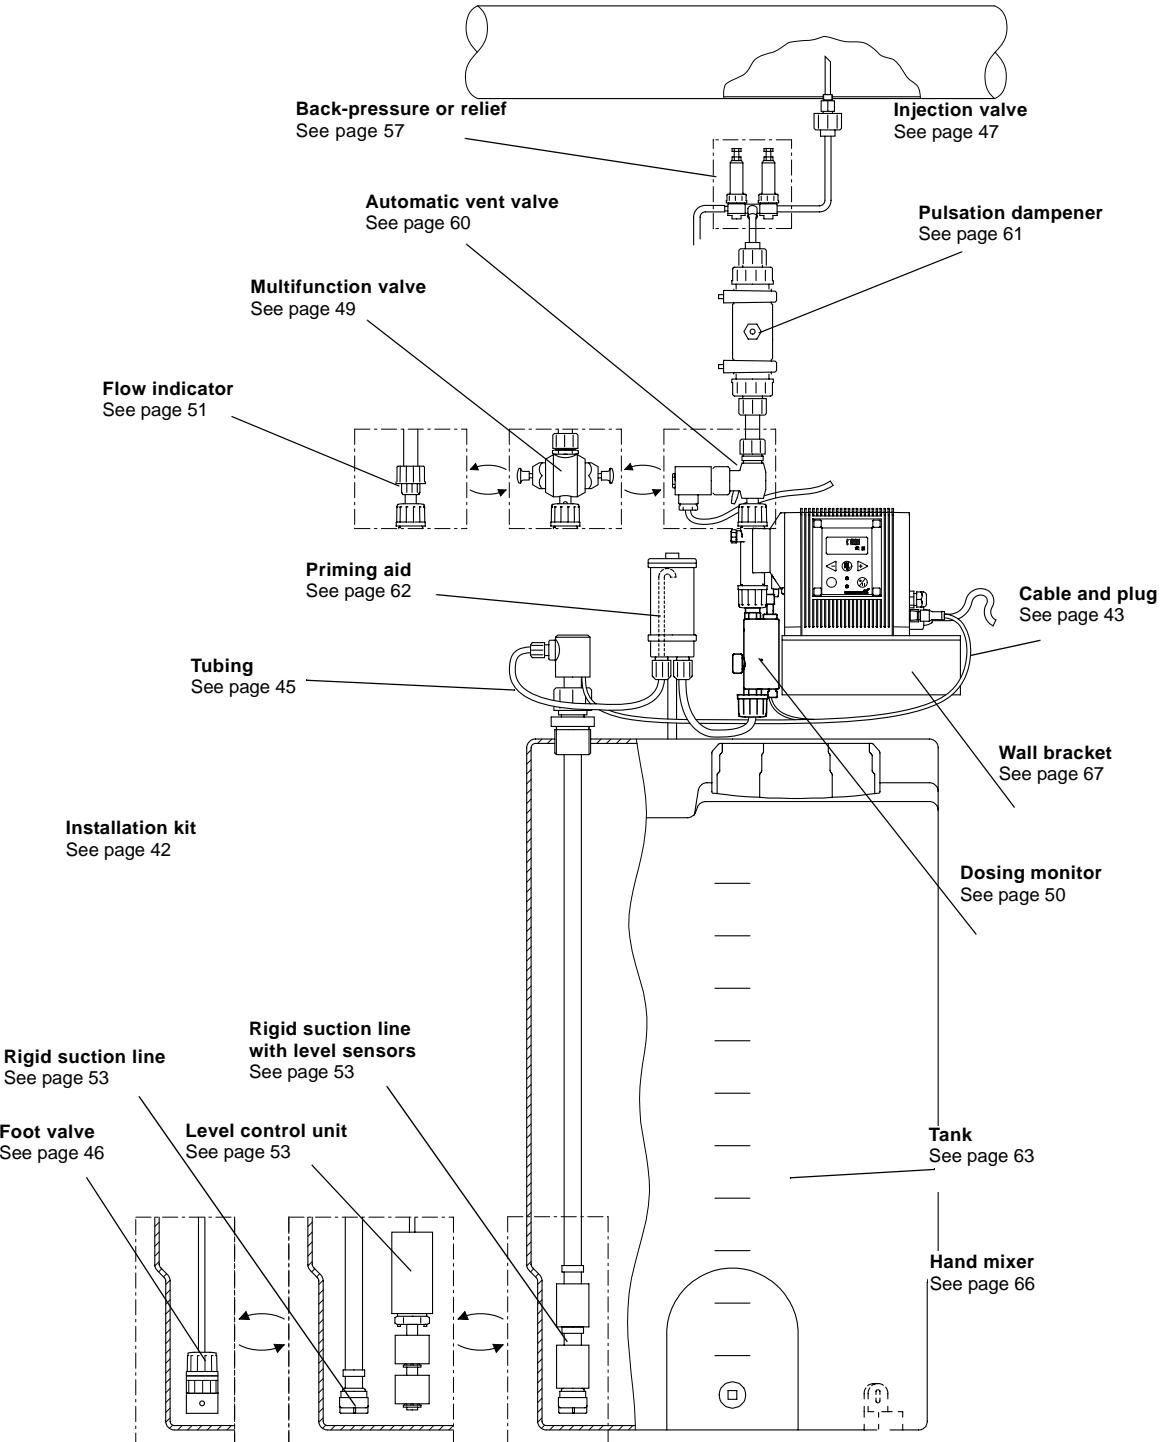

★<sup>6</sup> In neutral solutions.

★<sup>7</sup> Saturated solution 0.1%.

### Accessories

Grundfos offers a comprehensive range of accessories covering every need when dosing with Grundfos dosing pumps.

#### Overview

TM02 2099 3301

# Accessories

## Installation kit

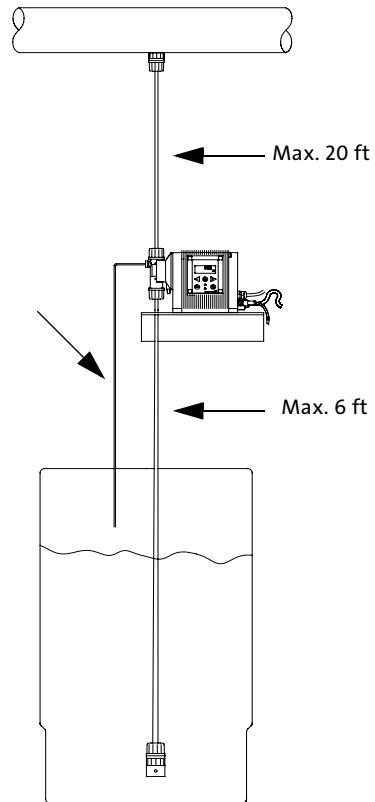

### Installation kit

The installation kit includes:

- foot non-return valve with strainer and weight
- injection non-return valve, spring-loaded
- 20 ft PE discharge tubing
- 6 ft m PVC suction tubing
- 6 ft m PVC vent tubing.

TM01 8956 0900

TM02 21083401

Pump type	Materials			Tubing Connections		Product Number
	Housing	Ball	Gasket	Suction	Vent	
DME 2 to 48 DMS	PP	EPDM	Ceramic	1/4"	1/4"	96480670
				3/8"	1/4"	96479881
				1/2"	1/4"	96479947

Tube size	ID	OD
1/4"	0.17"	1/4"
3/8"	1/4"	3/8"
1/2"	3/8"	1/2"

### Cable and plug

Cable and plug for connection of pump to external control devices, such as process controllers, flow meters, start/stop contacts, and level sensors.

Grundfos level control units are factory-fitted with cable and plug connection for Grundfos dosing pumps.

The cables and plugs fit all dosing pumps, types DME and DMS-A.

Cable material: PUR (0.34 mm<sup>2</sup>)

Plug type: M12.

TM01 8955 0900

Signal	Number of poles	Type	Cable length [ft]	Product number
Pulse, 0/4-20 mA, start/stop	5	Control cable with plug	6.5	96440447
		Plug terminal without cable	16	96440448

		Plug terminal without cable	-	96440452
Stop dosing input and output*	5	Extension cable	6.5	96483235
		Control cable with plug	6.5	96527109
		Control cable with plug	16	96527111
Alarm Relay Cable*	3	Relay cable with plug	6.5	96534214
		Relay cable with plug	16	96534215

\*) Only DME 60 to 940

Note - DME 2 to 48 and DMS AR versions have alarm relay cable hard-wired to pump.

### Diaphragm leakage sensor (DME 60 to 940)

Optoelectronic leakage sensor to be inserted in the drain hole behind the diaphragm for sensing diaphragm breakage or leakage.

The sensor unit consists of:

- Transmitter receiver
- Holder for fitting sensor in the backplate
- M12 plug and wire to transmit signal to pump.

When the liquid gets into contact with the sensor, the light refraction changes, causing the sensor to emit a signal.

The signal emitted from the sensor triggers the pump to stop dosing and give pump output alarm.

GR 8211p

Pump type	Size	Type	Cable length [m]	Product number
DME 60-940 (l/h)	M12	Leakage sensor M12	0.5 m	96534443

### Tubing

Tubing in various materials, sizes and lengths.

Injection valve

## Injection valve

Injection valve complete with spring-loaded non-return valve, injection pipe and tube or pipe connection.

Spring material: Hastelloy

Opening pressure:

DN 4, DN 8: 10 psi (0.7 bar)

DN 6, DN 10,

DN 15, DN 25: 16 psi (1.1 bar).

Maximum temperature:

PP, PVDF: 122 F (50 °C)

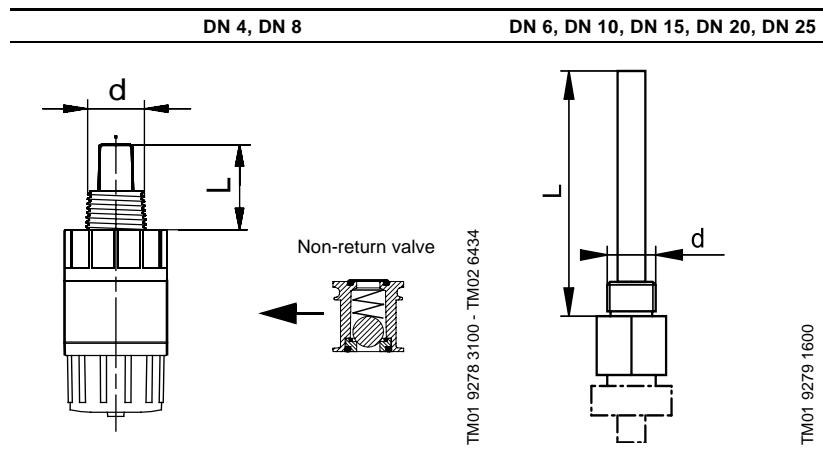

PVC: 104 F (40 °C)

Stainless steel: 176 F (80 °C).

GR8107 - GR7098

### Hot injection valve

The hot injection valve kit is a complete assembly with shut-off valve, pipe, and tubing connection fitting for chemical injection into steam and hot water applications.

It allows for direct dosing into systems with a maximum liquid temperature of 302 F (150 °C) at the point of injection.

The hot injection valve kit is delivered non-assembled to facilitate adaptation to the actual application.

#### Materials:

Shut-off ball valve	316 SS
Pipe	316 SS
Pipe connection	316 SS
Tubing connection	PVDF
Max. injection point temperature	302 F (150 °C)

#### Dimensions:

Shut-off ball valve	1/2"
Pipe	8/10 mm
Pipe connection	1/2"
Tubing connection	3/8" ID 1/2" OD.

Max. flow rate GPH [l/h]	Size	Material			Connection		Product number
		Connection	Gasket	Ball	Type	Tubing diameter	
5.3 (20)	DN 4	PVDF	FKM	Ceramic	Tubing	3/8" / 1/2"	96567703

### Multifunction valve

Compact valve unit for direct mounting on the pump discharge connection. The valve has four functions:

1. Constant counter-pressure
2. Anti-siphoning
3. Pump protection
4. Manual pressure relief.

Relief pressure: 160 psi (11 bar)

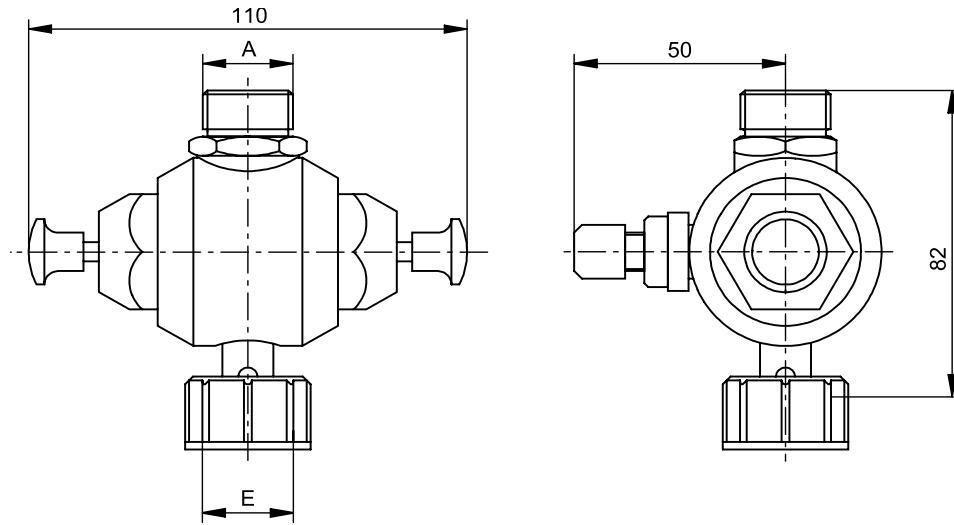

Constant counter pressure: 22 psi (1.5 bar)

Maximum volume: 13 GPH (50 l/h).

\* M28 x 2 fits stainless steel pump heads

### Dosing monitor

The dosing monitor is used in connection with the dosing monitoring function of DME 2 to 48, and DMS-A, AR pumps.

The monitor sends a pulse signal (closed contact) for every measured dosing stroke.

As the DME pump will often operate without pulsation on the discharge side, the monitor must always be installed on the suction side.

The monitor for a DMS pump can be installed on both suction and discharge side.

Maximum pressure: 145 psi (10 bar)

Maximum volume: 13 GPH (50 l/h)

Maximum liquid temperature: 95 F (35 °C)

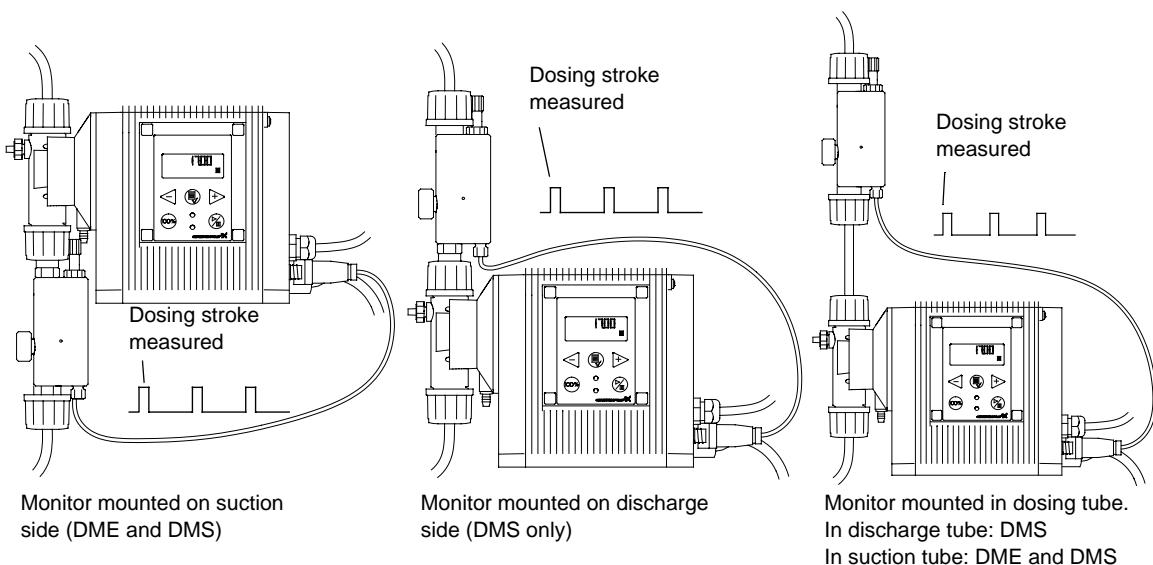

Maximum liquid viscosity: 20 cps

Maximum load of pulse transmitter (reed contact): 48 VAC/VDC, 0.5 A

Materials in contact with liquid: PMMA/PVC/FKM.

TM02 2472 4401

TM02 2029 3201 - TM02 2030 3201 - TM02 2031 3201

### Selection table

		FKM	PP		96470725
		EPDM	PVDF		96493010
Pump discharge*	PP, PVDF	FKM	Not needed	Pump connection is used on inlet of monitor	96470723
		EPDM			96492899
Pump inlet	PP, PVDF	FKM	Not needed	Pump connection is used on inlet of monitor	96470724
		EPDM			96493011

\*Not suitable for DME pumps

Not suitable for SS pump heads

### Flow indicator

The flow indicator is used for discharge monitoring.

When the dosing pump is discharging liquid, the white ball will jump in the transparent pipe. Each dosing stroke causes a ball jump. The design of the flow indicator allows ball movements to be seen at flow rates from 0.026 to 11.9 GPH.

At a steady flow, the ball will always be in the top position.

The flow indicator installs and retrofits easily.

Material: PVC grey, PVC transparent,  
PVDF, FKM, ceramic Al<sub>2</sub>O<sub>3</sub>.

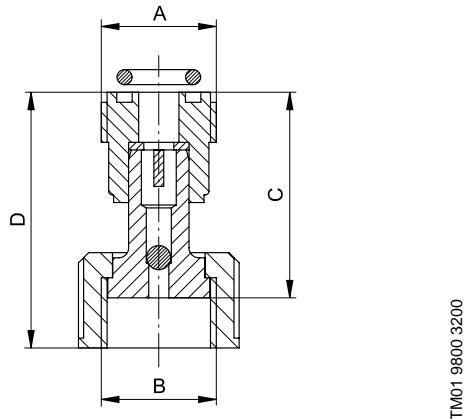

Maximum pressure: 145 psi (10 bar)

Maximum pulsed flow: 11.9 GPH (45 l/h).

TM01 9791 3100

# Accessories

Level control unit

## Level control unit

For dosing pumps with level control input (variant A), complete with level sensors (NO-contacts), ceramic weight, cable and plug for pump connection.

Material: PVC

Level cable length: 8.2 ft

Level plug type: M12, 4-pole

Maximum load of  
level contacts: 50 V, 0.5 A

Function of level contacts:

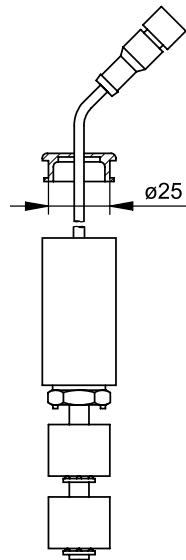

Low level/empty tank = closed contact

Product number: 96440539.

TM01 9587 2100

## Dimensions

TM01 9587 1600

### Rigid suction line

The pre-assembled rigid suction line features an adjustable length for use with a tank. It consists of foot valve with strainer, rigid suction pipe, tank connection thread, and suction tube.

For control variant A pumps, the suction line is available with level sensors (NO-contacts) for warning and empty-tank signals, supplied complete with cable and plug for pump connection.

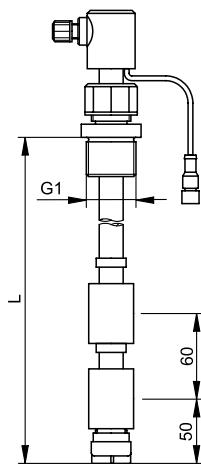

Material:	PVC
Material, wetted parts:	PVC, glass
Suction tubing length:	4.9 ft, PVC-tube
Level cable length:	4.9 ft
Level plug type:	M12, 4-pole
Maximum flow:	13 GPH (50 l/h)
Maximum load of level contacts:	50 V, 0.5 A
Function of level contacts:	
Low level/empty tank =	closed contact
PE screw cap:	15/16 in (33.5 mm)
Product Number:	96483418.

### Back-pressure or relief valve

Adjustable valve for installation in the discharge tube.

- Installed in-line, the valve functions as a counter-pressure valve optimising dosing accuracy into systems with fluctuating pressure or as anti-siphoning valve when dosing into pressureless systems.
- Installed in a T-connection with the valve outlet connected to the tank, the valve functions as a pressure relief valve or a safety valve, protecting the pump and the discharge tube against excessive pressures.

Pressure range: 0-145 psi (0-10 bar)

Diaphragm material: PTFE.

	PV	FKM			96534796

# Accessories

## Automatic vent valve

### Automatic vent valve

Automatic vent valve for direct fitting on the pump discharge connection.

Valve housing material:	PMMA/PVC
O-ring material:	FKM
Valve ball material:	Glass
Valve seat material:	PVDF
Pump head material:	PP/PVDF
Power cable length:	5 ft
Opening pressure:	145 psi (10 bar)
Maximum flow:	11.9 GPH (45 l/h)
Supply voltage:	1 x 120V, 50-60 Hz
Plug type:	US.

TM01 9591 2100/TM01 9592 2100

The valve is available with and without timer.

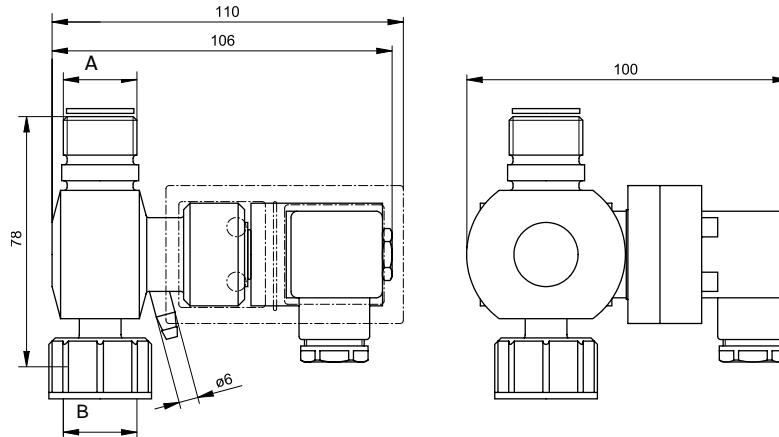

#### With timer:

The valve is continuously connected to the power supply. The opening time and opening intervals are set on the timer.

#### Without timer:

The valve will open when power is supplied to the valve. This version is ideal for operation in connection with a dosing monitor.

### Automatic vent valve with timer (mm)

Pump type	Dimensions A + B	Voltage	Plug	Product number	
				With timer	Without timer
DME 2 to 48 DMS	M30 x 3.5	1 x 120 V, 50-60 Hz	US	96441084	96471086

### Pulsation dampener

The pulsation dampener can be installed both in the suction or discharge line for reducing pressure surges, thereby ensuring a steady flow. The dampener is particularly suitable for long discharge lines and/or lines with a small diameter.

Installed in the discharge line, the dampener can be used to optimize dosing accuracy and to protect the pump and discharge line against pressure surges. Depending on the system pressure, it may be necessary to install a back-pressure valve after the dampener to optimize its function.

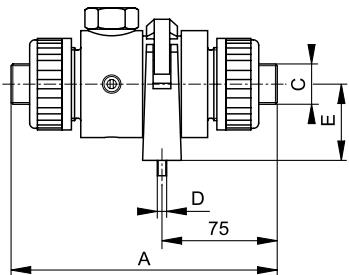

Maximum pressure: 145 psi (10 bar).

TM01 9593 2100

### Priming aid

The priming aid is a transparent, air-tight collector with a screw cap on top. It is mounted between the tank and the pump. The inlet from the tank and the outlet to the pump are both at the bottom of the collector.

The priming aid is supplied with a bracket for wall mounting and a rod for mounting on top of the tank.

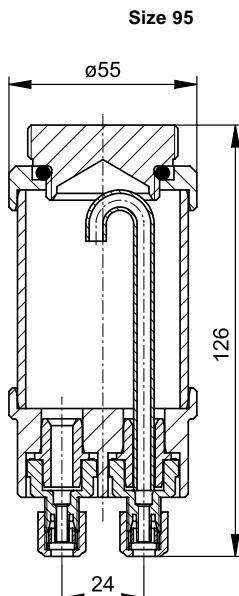

The priming aid has the following functions:

- **Priming.**  
The priming aid facilitates priming in case of frequent stops and/or high suction lifts by eliminating or reducing the dry-suction phase.
- **Gas trap.**  
Gas occurring in the suction tube is trapped in the top of the priming aid to prevent it from entering the dosing head.
- **Pulsation dampening.**  
The dampening gas cushion in the top of the priming aid reduces pressure surges, resulting in optimum dosing accuracy and reduced risk of cavitation.

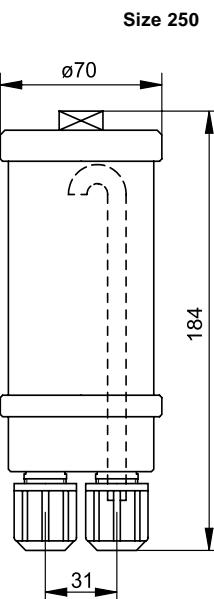

Material: PVC.

### 100-liter tank

Closed square tank with screw cap and mounting platform for single or parallel pump mounting.

The pump mounting platform is raised above the screw cap to protect pumps and connections when filling chemical into the tank.

The height difference also allows for direct mounting of the dosing monitor on the suction side.

Material: MDPE

Weight: 15 kg

Max. material temperature: 122 F (50 °C)

Liquid temperature: Minimum -4 F (-20 °C)  
Maximum 113 F (45 °C).

GR7309

### Mounting platform

DME and DMS pumps can be fitted direct on the platform by means of brass inserts moulded into the platform.

### Mounting combination

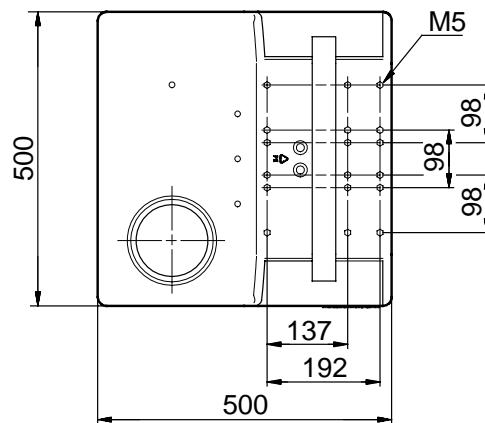

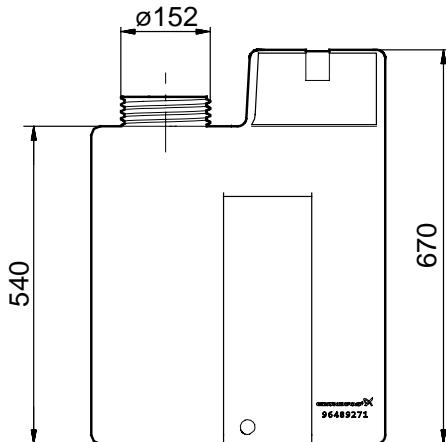

Single or parallel mounting of DME 2 to 48 and DMS.

The tank includes a raised 3/4" RG boss for a drain.

Material thickness: 4 mm.
