Ability to Visualize Positive Reaction Across a Large Surface	Yes	Yes	No
Relies on Color Change That is Difficult to See	No	Yes	No
Rapid Response	Yes	Yes	Yes
Rapid Detection Target	Biofilm	Varies	All Soils

*Positive Biofilm Reaction*

*Negative Biofilm Reaction*

## Product Overview

Indicon Gel is a rapid biological hygiene indicator specifically designed to identify the presence of biofilm on a surface. When the product comes into contact with biofilm, Indicon Gel rapidly produces white micro-bubbles/foam within 2 minutes, providing a visual indicator of potential harborage niches.\*

\* The lack of a positive reaction with Indicon Gel does not guarantee that the surface is free from microorganisms. Indicon Gel is not meant to take the place of routine microbial monitoring or organism specific diagnostic tests.
