LAYER

## ARCH® HYBRID FLEECE

### ENHANCED LIGHTWEIGHT WARMTH

ARCH® Hybrid Fleece is designed to push the boundaries of our base layer category. Our focus is on warmth and performance, but we also minimize fabric weight and enhancing overall breathability.

Creating air channels on the fabric's inner surface allows moisture to wick away efficiently, keeping your body warm, dry, and comfortable. ARCH® Hybrid Fleece delivers high performance most efficiently and effectively possible.

### TECHNOLOGY

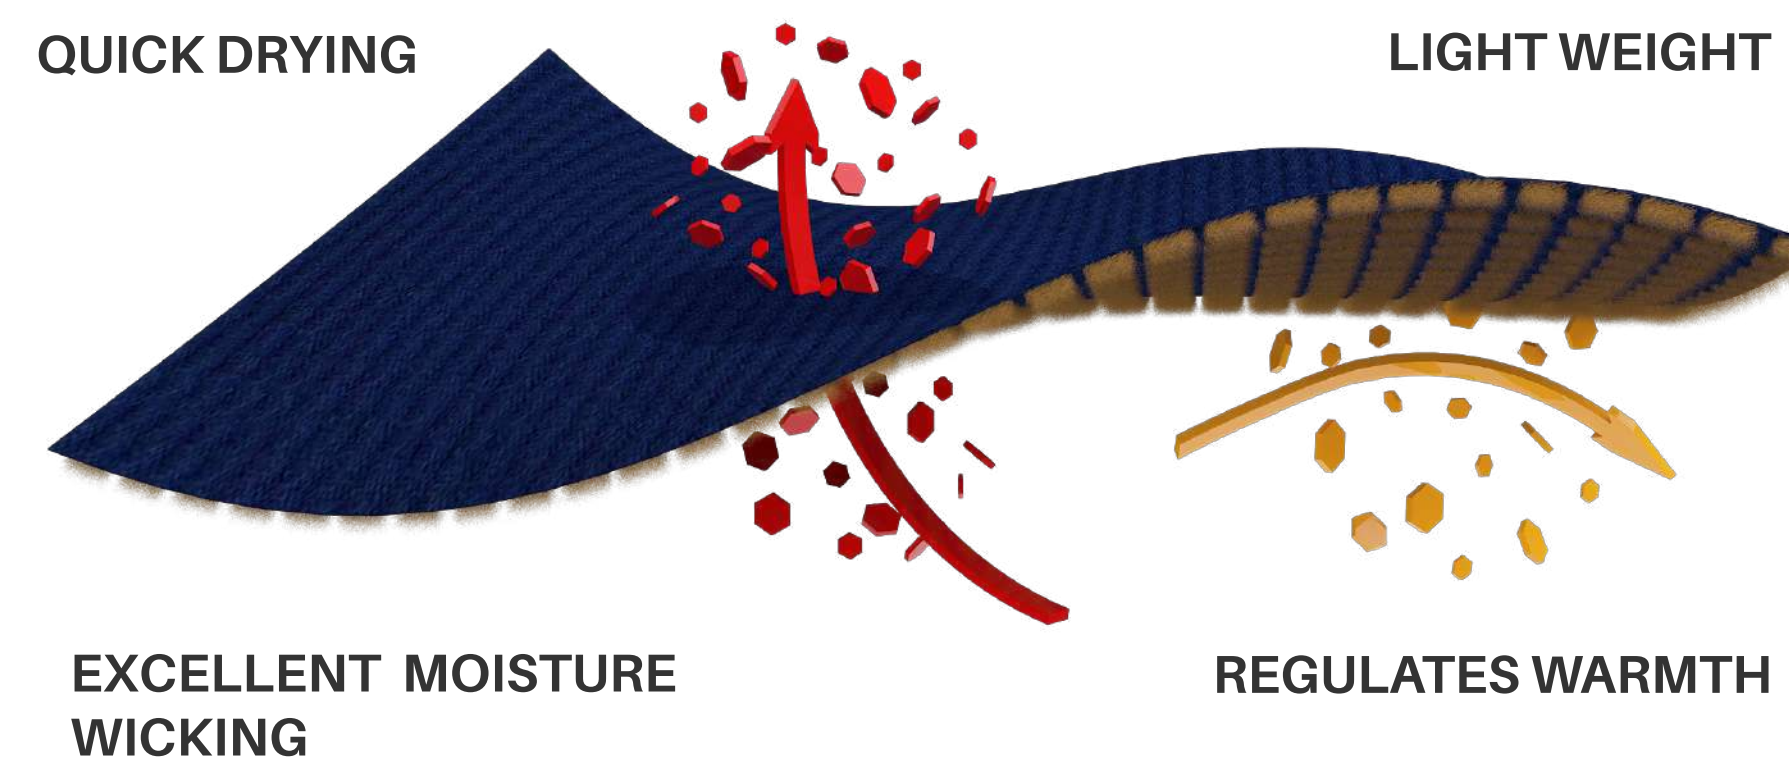

ARCH® Hybrid delivers lightweight warmth and high performance through its unique air channel construction on the fabric's inner surface.

The fabric design helps increase thermal efficiency, breathability, and compressibility while lowering overall fabric weight.

Each breathable air channel allows the absorption and diffusion of moisture from your skin, released out for increased evaporation. This design also allows the excess body heat built up during your activity to be released, ensuring optimal comfort. Due to its compression capabilities, garments produced with ARCH® Hybrid Fleece are easy to pack and perfect for those needing to store materials with limited space.

### RECOMMENDATIONS

ARCH® Hybrid Fleece fabrics are highly breathable and the ideal base layer for all sporting activities.

### BENEFITS

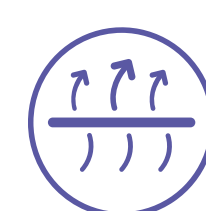

#### REDUCED FABRIC WEIGHT AND INCREASED WARMTH

Keep warmth to the body

#### EXCELLENT MOISTURE WICKING

Pull moisture away from the body

#### HIGHLY BREATHABLE

Allows moisture vapor pass through & Keep comfortable

#### QUICK DRYING

Keep Dry to the body

### AVAILABLE TECHNOLOGY

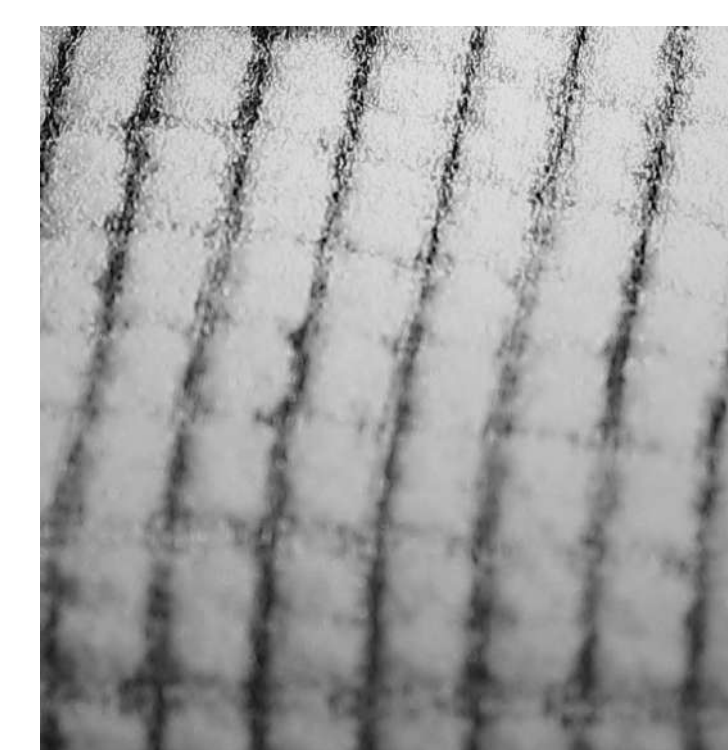

#### ODOR RESISTANT WITH FORTUNE CUPLUS®

Reducing odor from the body

#### RECYCLED WITH MAGNIF-ECO®

Made of recycled fabric
