

sorbet attachment

Auger

Part of your Nama J2

Sorbet Attachment

Makes sorbet using
frozen fruits

Chamber

Part of your Nama J2

Juicer Base

Part of your Nama J2

instructions

1. Insert auger into sorbet attachment. Align the large and small wings on sorbet attachment with large and small cutouts on the chamber.
2. Continue to assemble the hopper as you would for juicing. Place the pulp container under the pulp outlet to catch the sorbet.
3. Turn juicer to the ON position. Note: Sorbet exits the pulp outlet.
4. Add frozen fruit ingredients one-by-one into the hole of the hopper lid. If using multiple ingredients, mix the loading order to get the best sorbet blend.
5. When finished, turn juicer to the OFF position. Wait for it to completely stop. Remove the chamber set, then disassemble before washing.

TIPS:

- Use frozen fruit that fits into the hole of the hopper lid.
- Allow frozen fruit to thaw for 5 minutes before loading.
- Avoid ice, frozen liquid, and hard seeds or pits found in stone fruit.
- The spinning brush is not needed to make sorbet.
- Sorbet may overshoot the container, so keep an eye on it as it dispenses.
