1. Introduction

This data booklet deals with CRN, CRNE pumps for high-pressure applications.

A high pressure can be achieved in two ways:

- One pump with a frequency-controlled high-speed motor:
 - CRNE-HS, pump sizes 1 and 3. The chamber stack is upside-down compared to the CRN pump.
- Two pumps connected in series. A standard CRN (model 3-64) feeding a CRN-SF (model 3-64) high-pressure pump:
 - CRN-SF, pump sizes 3 to 64. The chamber stack is upside-down compared to the CRN pump.

The pumps described in this data booklet are CRN-SF high-pressure pumps.

The pressure generated by the high-pressure pump makes special demands on the design. This data booklet primarily describes the following aspects where the high-pressure pump differs from the feed pump:

- design
- operating conditions
- performance curves
- dimensions.

The performance curves and dimensional sketches for the CRN-SF pump range show the high-pressure pump connected in series with a feed pump with various numbers of stages.

Motors

CRN pumps are fitted with a Grundfos specified motor. The motors are all heavy-duty 2-pole, NEMA C-face motors. The pumps are supplied with WEG motors as standard.

Grundfos ML motors are available on request.

The CRNE pumps are fitted with a high-speed Grundfos MGE motor with an integrated frequency converter.

Pump Energy Index (PEI)

Pump Energy Index (PEI) was established by the U.S. Department of Energy (DOE) and adopted by Canada as the standard metric used to evaluate pump efficiency. The value is the ratio of the pump efficiency rating (PER) divided by the calculated minimally compliant PER (PER_{STD}) for the pump type. This provides a representation of the actual performance of a pump compared to the minimal standard performance required by regulation. The lower the PEI value, the more efficient a pump is at the tested operating points.

PER is determined by defined testing parameters required by the DOE. This includes testing a particular pump model at its best efficiency point (BEP).

For PEI values, there are two different versions:

- PEI_{CL} (constant load): applies to a bare-shaft pump and a pump sold with a motor
- PEI_{VL} (variable load): applies to pumps sold with a motor and controller (such as VFD, VSD).

The DOE has set the maximum PEI value to be 1.00. Any pump, pump and motor, or pump, motor and controller that exceeds a PEI value of 1.00 can no longer be manufactured after January 26, 2020.

PEI is a generalized efficiency value. PEI cannot be used to determine the efficiency of a pump in a specific application.

PEI values for CRN high-pressure pumps

Product type	Poles	PEI_{CL} bare-shaft pump	PEI_{CL} pump with motor	PEI_{VL} pump with motor plus controller ¹⁾	Impeller diameter [in (mm)]

2. Applications

The CRN high-pressure series is a multi-purpose pump range suitable for a large variety of applications demanding a reliable and cost-efficient supply.

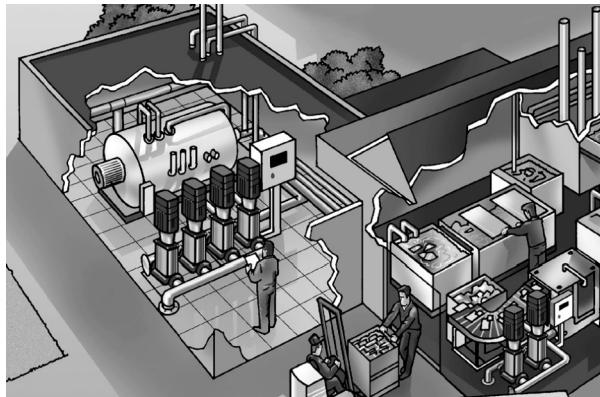

The CRN pumps handle a variety of liquids from potable water to industrial liquids within a very wide temperature range, flow rate and pressure scale.

Industry

The lists below show some general examples of applications requiring a high pressure.

Pressure boosting

- Process water systems
- washing and cleaning systems
- high-pressure washdown systems
- boiler feed and condensate systems.

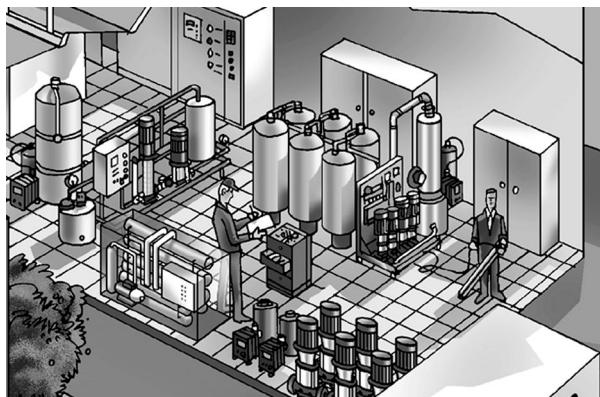

TM021208

Industrial application

Water treatment

- Ultra-filtration systems
- reverse osmosis systems.

TM021209

Process water treatment

Pump

CRNE-HS is a single-pump solution capable of operating at 725 psi (50 bar).

The CRNE-HS pump is a non-self-priming, vertical, multistage centrifugal pump fitted with a high-speed Grundfos MGE motor with an integrated frequency converter.

The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down. Consequently, the pumped liquid flows in the opposite direction.

This special design ensures that the shaft seal is not affected by the pump outlet pressure.

The base, pump head cover and all components in contact with the pumped liquid are made of stainless steel.

The pump has a maintenance-free mechanical cartridge shaft seal.

Operating conditions

Liquid temperature:	-4 to +248 °F (-20 to +120 °C)
Ambient temperature:	Maximum +122 °F (+50 °C)
Minimum inlet pressure:	29 psi (2 bar)
Maximum inlet pressure:	362 psi (25 bar)
Maximum operating pressure:	725 psi (50 bar)

Pump

CRN-SF is a double-pump system capable of operating at 725 psi (50 bar).

The system consists of two pumps connected in series. One pump is a CRN pump for feeding. The other pump is a CRN-SF high-pressure pump, especially designed for high pressures.

The CRN-SF pump is a non-self-priming, vertical, multistage centrifugal pump fitted with a Grundfos MG or Innomotors motor specially modified to withstand the thrust of the motor.

The direction of rotation of the CRN-SF is the opposite of that of CRN pumps, and the chamber stack is turned upside-down. Consequently, the pumped liquid flows in the opposite direction inside the pump.

This special design ensures that the shaft seal is not affected by the pump outlet pressure.

The base, pump head cover and vital pump components are made of stainless steel. The base has in-line inlet and outlet ports with Victaulic connections.

The pump has a maintenance-free mechanical cartridge shaft seal.

Operating conditions

Liquid temperature:	-40 to +248 °F (-40 to +120 °C)
Ambient temperature:	Maximum +122 °F (+50 °C)
Minimum inlet pressure:	29 psi (2 bar)
Maximum inlet pressure:	362 psi (25 bar)
Maximum operating pressure:	725 psi (50 bar)

7. Operating conditions

Ambient temperature and installation altitude

The ambient temperature and the installation altitude are important factors for the motor life as they affect the bearings and the insulation system. The installation altitude is the height of the installation site above sea level.

Motors installed up to the maximum ambient temperature and altitude can be loaded 100 %.

If the ambient temperature or the installation altitude exceeds the recommended maximum values, the motor must not be fully loaded due to risk of overheating. Overheating may result from excessive ambient temperatures or high altitudes with low density and low cooling effect of the air.

In such cases, it may be necessary to select an oversized motor with a higher rated output. To determine the motor load, it is necessary to calculate the derated motor power.

Maximum ambient temperature and altitude for Grundfos ML motors

The maximum ambient temperature at which IE3 motors can operate is 140 °F (60 °C). The motor can run and still be within the tolerance of the insulation class at the maximum rated temperature.

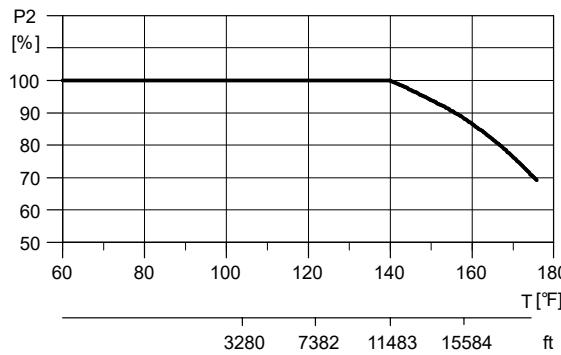

The maximum altitude is 3280 feet (1000 meters).

Motor output derating factors

If the ambient temperature exceeds the maximum temperature limits of the pump or the pump is installed at an altitude exceeding the altitude values in the chart below, the motor must not be fully loaded due to risk of overheating.

Overheating may result from excessive ambient temperatures or the low density and consequently low cooling effect of the air at high altitudes. In such cases, it may be necessary to use a motor with a higher rated output (P2).

Motor load for Grundfos ML motors

Relationship between motor output (P2) and ambient temperature (T) and altitude (ft)

Example of maximum motor load

From the figure above, it appears that P2 must be reduced to 88 % when a pump with a NEMA premium-efficiency ML motor is installed at 15,584 ft (4750 m) above sea level. At an ambient temperature of 167 °F (75 °C), P2 of a standard-efficiency motor must be reduced to 74 % of rated output.

In cases where both the maximum temperature and the maximum altitude are exceeded, the derating factors must be multiplied.

Example: $0.89 \times 0.89 = 0.79$.

Maximum ambient temperature and altitude for Grundfos MGE motors

The table shows the maximum permissible ambient temperature at full load and the maximum permissible installation altitude above sea level at full load.

Motor efficiency class: IE5

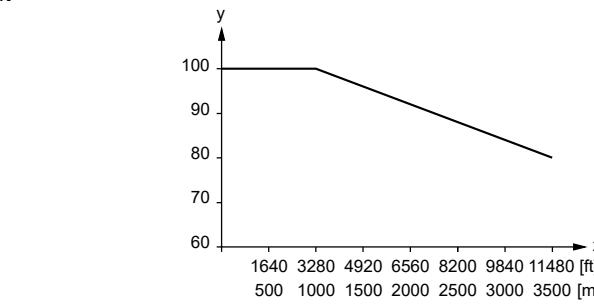

Motor power [hp]	Motor make	Phase	Max. ambient temperature [°F (°C)]	Max. altitude above sea level [ft (m)]
1-30	MGE	3	122 (50) ⁷⁾	3280 (1000)

⁷⁾ 3 x 200–240 V MGE motors are rated for a maximum ambient temperature of 104 °F (40 °C).

Motor load for Grundfos MGE motors

MGE motors can be installed up to 11480 ft (3500 m) above sea level.

Motors installed above the maximum installation altitude of 3280 ft (1000 m) above sea level must not be fully loaded. Use the below curve to calculate the derated motor power. If the required motor output exceeds the derated motor power, select an oversized motor.

TM086743

Derating of motor output power P2 % (y-axis) in relation to installation altitude above sea level in feet (x-axis)

Maximum ambient temperature and altitude for WEG and Innomotors motors

Consult Grundfos for maximum ambient temperature and altitude and de-rating of WEG and Innomotors motors.

Shaft seal operating range

The actual operating range of the shaft seal for the high-pressure pump depends on operating pressure, type of shaft seal and liquid temperature.

The following temperature ranges apply to clean water.

Operating conditions of the shaft seal for the CRN high-pressure pump

Shaft seal	Description	Max. temp. range [°F]
HQQE	O-ring (cartridge) (balanced seal), SiC/SiC, EPDM	-22 to +248
HQQV	O-ring (cartridge) (balanced seal), SiC/SiC, FKM	-4 to +194
HUBE	O-ring (cartridge) (balanced seal), TC/carbon, EPDM	+32 to +248
HUBV	O-ring (cartridge) (balanced seal), TC/carbon, FKM	+32 to +194

8. Selection

Selection of pump

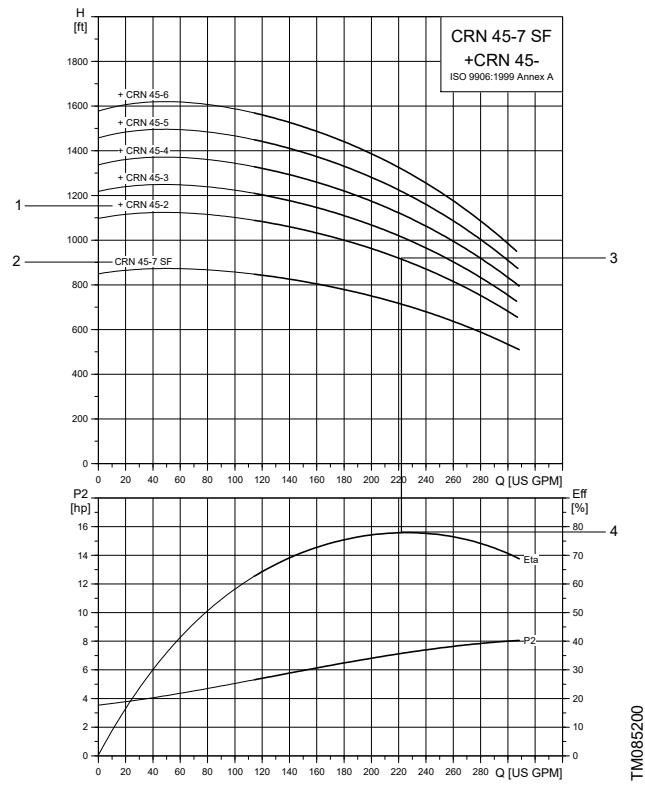

Pump size

Base the selection of the pump size on the following parameters:

- required flow rate and pressure at the duty point
- best efficiency at the estimated duty point
- pressure loss as a result of height differences
- friction loss in the pipes, for example in connection with long pipes, bends and valves.

Pump efficiency and duty point

Before determining the best efficiency point, identify the operation pattern of the pump. If the pump is expected to always operate at the same duty point, then select a pump which is operating at a duty point corresponding to the best efficiency of the pump.

Example of a duty point

Pos.	Description
1	Feed pump
2	High-pressure pump
3	Duty point
4	Best efficiency

Minimum inlet pressure, NPSH

We recommend calculation of the inlet pressure "H" in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the inlet side of the pump.

The maximum suction lift "H" in feet of head can be calculated as follows:

$$H = p_b \times 2.31 - \text{NPSH} - H_f - H_v - H_s$$

Barometric pressure in psi.

p_b The barometric pressure can be set to 14.5 psi (1 bar). In closed systems, p_b indicates the system pressure in psi.

Net Positive Suction Head in feet of head.

NPSH To be read from the NPSH curve at the highest flow the pump will be delivering.

H_f Friction loss in inlet pipe in feet of head, at the highest flow the pump will be delivering.

Vapor pressure in feet of head.

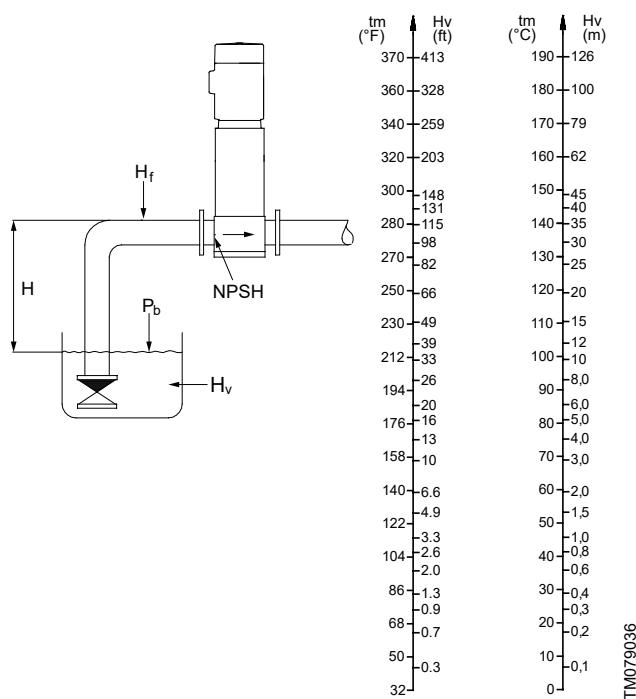

H_v To be read from the vapor pressure scale. H_v depends on the liquid temperature t_m .

H_s Safety margin = minimum 1.64 feet (0.5 meters) of head.

If the calculated "H" is positive, the pump can operate at a suction lift of maximum "H" feet of head.

If the calculated "H" is negative, an inlet pressure of minimum "H" feet of head is required.

CRN, CRNE high pressure

Minimum inlet pressure, NPSH

To avoid cavitation, never select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow rate.

Inlet pressure and operating pressure

Do not exceed the limit values for these pressures:

- minimum inlet pressure
- maximum inlet pressure
- maximum operating pressure.

Examples of operating and inlet pressures

The values for the operating pressures and inlet pressures must not be considered individually. The outlet pressure must be equal to or lower than the maximum operating pressure.

See the following examples:

Example 1:

The following pumps in series are selected.

First-stage pump: CRN 5-24.

Second-stage pump: CRN 5-24 SF.

	CRN 5-24 [psi]	CRN 5-24 SF [psi]
Maximum operating pressure	362	725
Maximum inlet pressure	218	362
Outlet pressure against a closed valve	345	

In this example, the pump outlet pressure against a closed valve for the first-stage pump is 345 psi.

The inlet pressure added to the outlet pressure against a closed valve must not exceed the maximum operating pressure of the pump. The maximum operating pressure of the CRN 5-24 is 362 psi.

The first-stage pump is not allowed to operate at the maximum inlet pressure of 218 psi, since the maximum inlet pressure (218 psi) added to the outlet pressure against a closed valve (345 psi) is greater than the maximum operating pressure of the pump (362 psi).

The maximum allowed inlet pressure of the pump is 17 psi, that is the difference between the maximum operating pressure of the pump (362 psi) and the outlet pressure against a closed valve (345 psi).

Example 2:

The following pumps in series are selected.

First-stage pump: CRN 45-4.

Second-stage pump: CRN 45-7 SF.

	CRN 45-4 [psi]	CRN 45-7 SF [psi]
Maximum operating pressure	435	725
Maximum inlet pressure	217	362
Outlet pressure against a closed valve	215	

In this example, the pump outlet pressure against a closed valve for the first-stage pump is 215 psi.

The inlet pressure added to the outlet pressure against a closed valve must not exceed the maximum operating pressure of the pump. The maximum operating pressure of the CRN 45-4 is 435 psi.

The first-stage pump is allowed to operate at the maximum inlet pressure of 217 psi, since the maximum inlet pressure (217 psi) added to the outlet pressure against a closed valve (215 psi) is less than the maximum operating pressure of the pump (435 psi).

Shaft seal

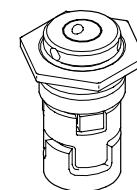

As standard, the CRN high-pressure range is fitted with an HQQE shaft seal suitable for the most common high-pressure applications.

These key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature.

Grundfos offers a wide range of shaft seal variants to meet specific demands.

For proper lubrication of the shaft seal, be sure to note the operating conditions for the pump.

TM020558

Shaft seal

Servicing shaft seals

Replacement shaft seals are available as complete service kits.

Shaft seals fitted on CRN 95-185 pumps with Ø1.1 in (Ø28 mm) or Ø1.4 in (Ø36 mm) shaft ends are serviceable. This means that the wear parts in these shaft seals are available as service kits and can be replaced without having to renew the complete shaft seal.

All service kits include detailed instructions on how to carry out the replacement.

Pumped liquids

The pumps are suitable for pumping thin, non-explosive liquids, not containing solid particles or fibers. The liquid must not attack the pump materials.

CRN pumps are suitable for industrial liquids and are to be used in systems where all parts in contact with the liquid must be made of high-grade stainless steel.

List of pumped liquids

A number of typical liquids are listed below.

Other pump versions may be applicable, but those stated in the list are considered to be the best choices.

The table is intended as a general guide only and cannot replace actual testing of the pumped liquids and pump materials under specific working conditions.

Therefore, use the list with some caution. Factors such as those mentioned below may affect the chemical resistance of a specific pump version:

- concentration of the pumped liquid
- liquid temperature
- pressure.

Take safety precautions when pumping dangerous liquids.

Notes

D Often with additives.

E The density and/or viscosity differ from that/those of water. Take this factor into account when calculating motor output and pump performance.

F Pump selection depends on many factors. Contact Grundfos.

H Risk of crystallization/precipitation in shaft seal.

1 Highly flammable liquid.

2 Combustible liquid.

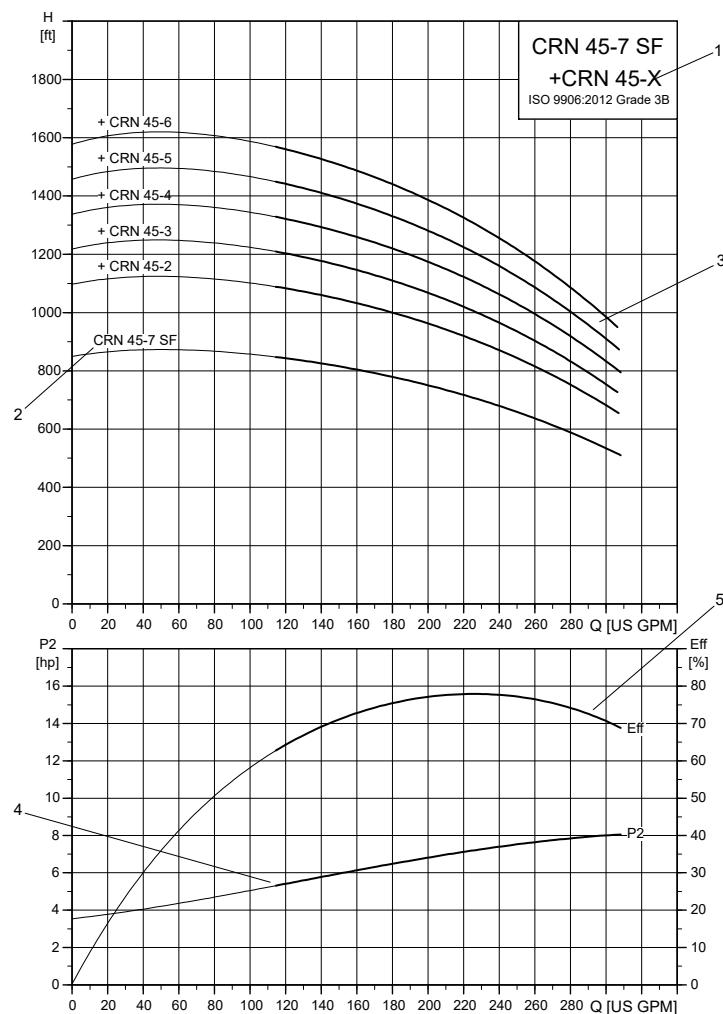

3 Insoluble in water.

4 Low self-ignition point.

Pumped liquid	Chemical formula	Note	Liquid concentration, liquid temperature	CRN
Acetic acid	CH ₃ COOH	-	5 %, 68 °F (20 °C)	HQQE

How to read the curve charts

TM085591

How to read the curve charts

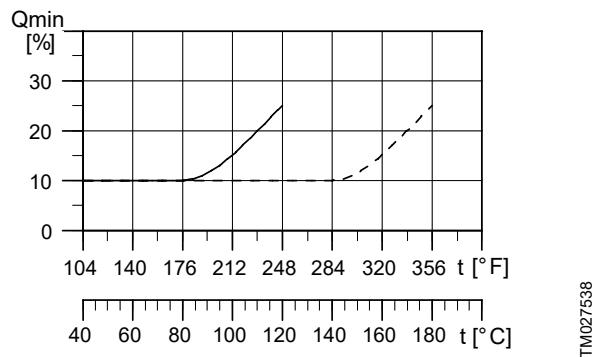

Pos.	Description
1	Pump type and ISO standard. Pump type with two pumps connected in series: feed pump + high-pressure pump. Example: CRN 45 + CRN 45-7 SF.
2	This is the high-pressure flip stack pump. The bold curves indicate the recommended duty range for best efficiency.
3	These are the CRN pumps used as feed pumps for the high-pressure pump. The bold curves indicate the recommended duty range for best efficiency.
4	The power curve indicates the pump input power per stage.
5	The Eff curve shows the efficiency of a pump with an average number of stages.

Guidelines to performance curves

The guidelines below apply to the performance curves:

- Tolerances to ANSI or ISO standards, such as ISO 9906:2012, Grade 3B, if indicated on the curve chart.
- The motors used for the measurements are standard Grundfos-specified motors.
- Measurements have been made with airless water at a temperature of 68 °F (20 °C).
- The curves apply to the following kinematic viscosity: $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).
- Due to risk of overheating, the pumps must not be used at a flow rate below the minimum flow rate.
- The QH curves apply to a rated motor speed of a three-phase mains-operated motor. For realistic curves, go to the Grundfos Product Center (<http://product-selection.grundfos.com>) and insert data.

The curve below shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature. The dotted line shows a CRN pump fitted with an air-cooled top assembly.

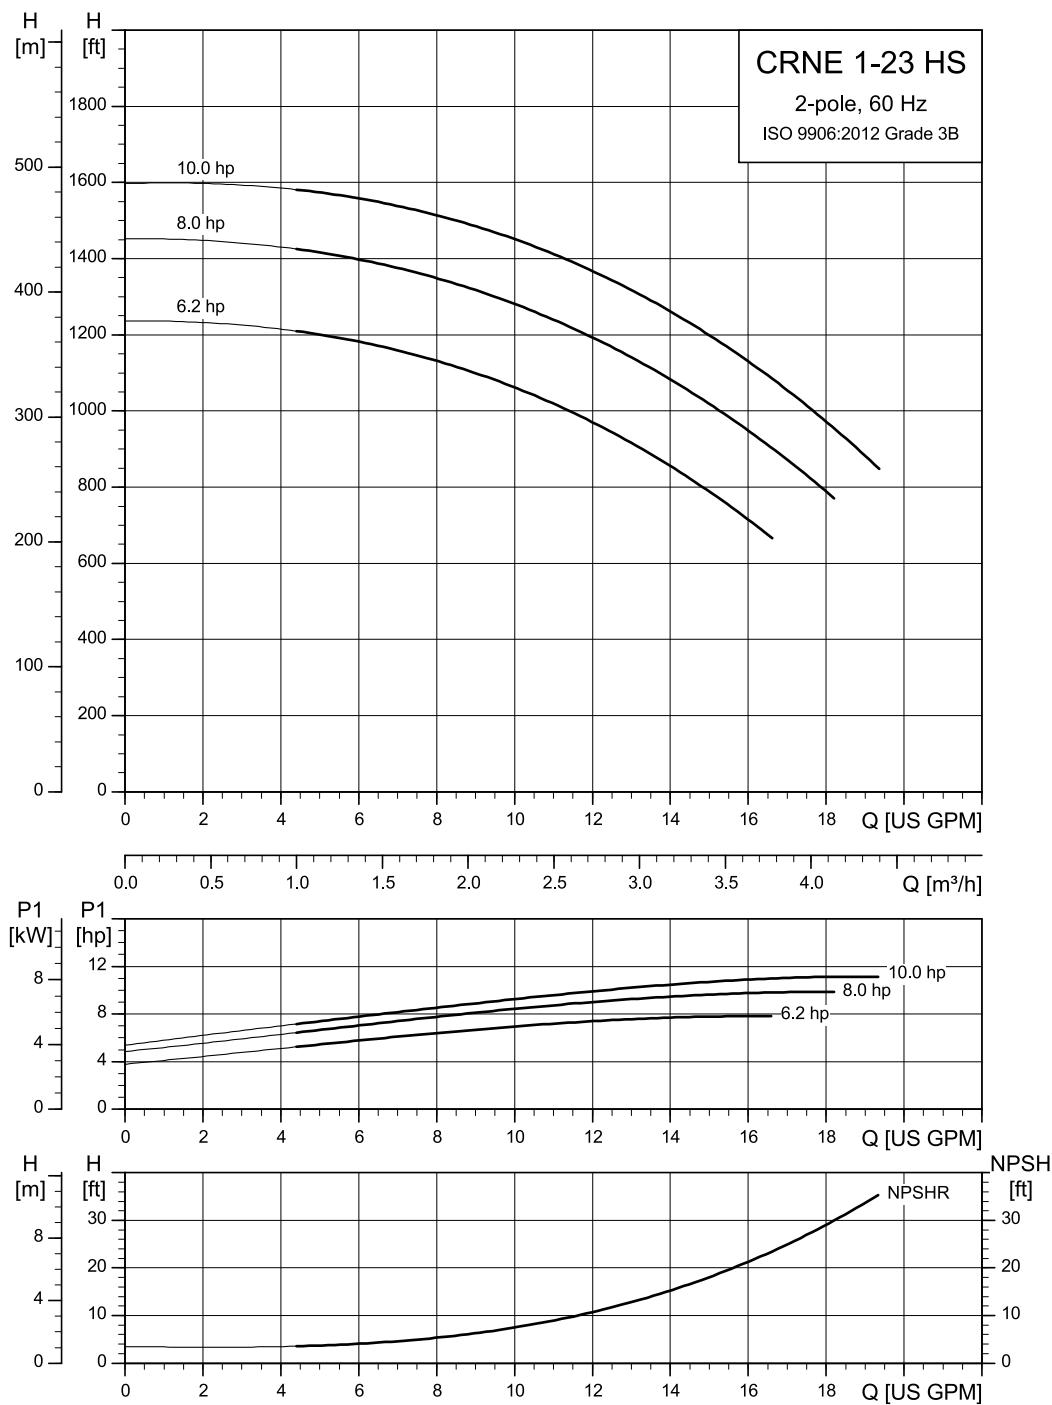

Minimum flow rate

²⁴⁾ Weights are based on a pump with a WEG motor.²⁵⁾ High-pressure pump.

The SF pump uses a modified Innomotors motor.

A standard WEG motor can be used with a bearing flange. In this case, the total height of the pump will increase based on the size of the bearing flange.

10. Motor data

Motors used in the CRN pump high-pressure range are the following:

- Grundfos-specified WEG motors
- Grundfos ML, MG and MGE motors
- Grundfos-specified Innomotors motors.

WEG motors 1/4 to 20 hp

- rolled steel construction
- service factor 1.15
- suitable for VFD operation per NEMA MG 1 part 31.4.4.2
- certified Class I, Division 2, Groups A, B, C, D

- certified Class II, Division 2, Groups F, G (three-phase only).

WEG motors 25 to 100 hp (18.5 to 75 kW)

- cast iron frame
- rated for severe duty
- service factor 1.25
- inverter rated per NEMA MG 1 part 31
- certified Class I, Division 2, Groups A, B, C, D
- certified Class II, Division 2, Groups F, G.

TEFC motors

Motors for CRN 3, 5, 10, 15, 20 feed pumps and for CRN 32, 45, 64 feed and high-pressure pumps

60	3	364TSC	1.25	575	93.6	53.6	67.0	354	WEG	

WEG motors with a nameplate stating 230/460 V are suitable for operation at 208 V.

All motors are TEFC (Totally Enclosed Fan Cooled, constant speed). Insulation class F.

The motors are recognized under the component recognition program of the Underwriters Laboratories Inc. for the United States and Canada.

IP55 motors

Motors for CRN-SF 3, 5, 10, 15, 20, 32, 45, 64 high-pressure pumps

hp	Ph	Frame	Service factor	Voltage [V]	Full-load current [A]	Motor type

TM069830

²⁶⁾Note that motor eff. is the total efficiency for the motor and variable frequency drive.

All motors are IP55 (similar to TEFC wash-down duty). Insulation class F.

The MGE motors are recognized under the component recognition program of the Underwriters Laboratories Inc. for the United States and Canada.

11. Accessories

Pressure sensor for CRNE-HS

Pump type	Pressure range	Product number
CRNE 1, 3 HS	0-870 psi	91136174

Danfoss pressure sensor kit consists of the following:

- Danfoss pressure transmitter type MBS3000
- 6 ft screened cable
- Connection: 1/4" NPT
- Pressure range 0-870 psi
- Enclosure class: IP65.

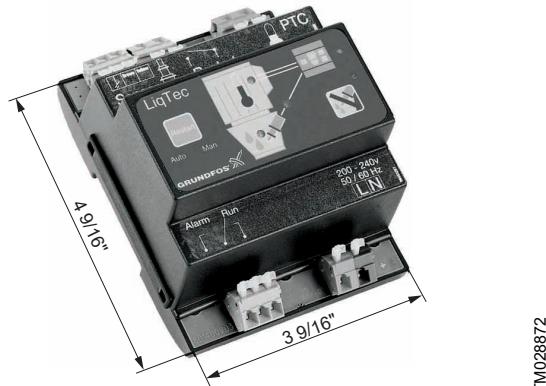

A priming valve with hollow stem is required when ordering a pressure sensor (product number 96527050).

LiqTec

The LiqTec dry-running protection unit protects the pump and process against dry running and temperatures exceeding 266 ± 9 °F (130 ± 5 °C). Connected to the motor PTC sensor, LiqTec also monitors the motor temperature.

The product features a fail-safe design. If the sensor, sensor cable, electronic unit or power supply fails, the pump stops immediately.

Mount the LiqTec box in a cabinet.

The maximum system pressure is 580 psi.

Sensor enclosure class: IP68.

Wetted parts: AISI 316L.

Voltage [V]	LiqTec	Sensor 1/2"	Cable 16.4 ft (5 m)	Extension cable 49.2 ft (15 m)	Product number

12. Grundfos Product Center

It is an online search and sizing tool to help you make the right choice.

From the international view, you can select your specific country to view the product range available to you.

International view: <https://product-selection.grundfos.com>

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc., in PDF format.

When you select your country, you see the menus below. Note that some menus may not be available depending on the country.

Example: <https://product-selection.grundfos.com/us>

Pos. Description

1 **Products & services** enables you to find products and documents by typing a product number or name into the search field.

2 **Applications** enables you to choose an application to see how Grundfos can help you design and optimize your system.

3 **Products A-Z** enables you to look through a list of all the Grundfos products.

4 **Categories** enables you to look for a product category.

5 **Liquids** enables you to find pumps designed for aggressive, flammable or other special liquids.

6 **Product replacement** enables you to find a suitable replacement.

7 **WWW** enables you to select the country, which changes the language, the available product range and the structure of the website.

8 **Sizing** enables you to size a product based on your application and operating conditions.

Grundfos GO

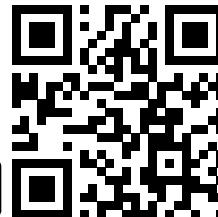

Mobile solution for professionals on the GO!

Grundfos GO is the mobile tool box for professional users on the go. It is the most comprehensive platform for mobile pump control and pump selection, including sizing,

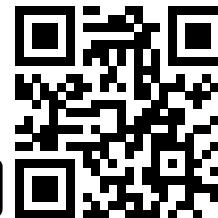

replacement and documentation. It offers intuitive, handheld assistance and access to Grundfos online tools, and it saves valuable time for reporting and data collection.
