Safety Notice & Installation Instructions

BRACCAS Collection

Kitchen island with or without counter

PLEASE READ AND FOLLOW THE SAFETY NOTICE PRIOR TO ASSEMBLY

Safety Notice

Your safety is a priority for coquo. It is important to always follow the assembly instructions and to comply with the safety warnings included in your module's packaging. These documents are also available free of charge at coquo.ca.

WARNING

Modules that are not secured to the wall with safety clips and appropriate anchors may tip and / or be a falling hazard, which can lead to accidents and / or serious injuries. To prevent a module from tipping over, it is essential to use safety clips and anchors to secure the module to the wall. Safety clips are included in the packaging. If, however, the clips are missing or misplaced, contact a modular specialist, who will be happy to send you the necessary clips free of charge. The anchors are not included in the package as the choice of anchor depends on the wall type that the modules will be affixed to. Do not hesitate to seek advice from your hardware store to properly choose the anchors that correspond to your wall type.

The cabinets cannot be used for climbing and they cannot support weight that exceeds the maximum limit that is specific to each module.

Safety Recommendation : Prevent children from climbing on or clinging to furniture, islands, drawers, shelves, or doors.

At coquo, your safety is our priority. It is very important to always follow the installation instructions and to conform to the safety notice that is included in the package of your module. These documents are also available online and free of charge at coquo.ca.

Safety Notice

BRACCAS COLLECTION

The braccas island is designed to receive a maximum weight of 150 pounds (68 kg), including the weight of the counter. The island cannot be used for climbing and it cannot support extra weight. The island, which is not secured to the wall with safety clips, carries a risk of tipping and / or falling, which can lead to accidents and / or serious injuries.

Counter

Available with or without a countertop, it is designed to accommodate a counter weight of up to 75 pounds (34 kg). The Fenix countertop has an approximate weight of 30 pounds (13 kg). For an installation including a stone counter, or any other type of surface that cannot be screwed into place, an adhesive must be used.

Metal structure

The metal structure of the island includes several openings to hang accessories. The structure is designed to receive a maximum weight of 20 pounds (9 kg). Electrostatic painting provides increased strength but some kitchen accessories may leave a residue or scratch the surface.

Installation Instructions

Coquo modules are easy to install!

No need to put together a multitude of components, the modules are shipped already pre-assembled.

You simply need to follow these installation instructions for the braccas kitchen island collection.

Necessary tools

Before beginning, be sure to have these items on hand:

- A phillips screwdriver

Preparation

- Prepare your space to receive the coquo modules and invite some friends over to help you!
- Make sure that the arrow indicators for the positioning of the boxes are respected.
- Open the box on the side where the indication is marked and remove the module from the packaging, while being careful not to scratch your floor.

Your package contains:

1. The components of the module; the wood frame (with or without counter), the metal frame, the legs, the assembly bolts and the allen key
2. The coquo safety notice and installation instructions leaflet
3. The safety notice

Assembly

- Remove the components of the module from the package and position them on a clean and level surface.
- On a cardboard surface, place the legs of your island upside down and using the allen key, assemble the metal frame to the legs (2 bolts per leg). There is a small perforation on the top of the metal structure, be sure that it is facing the floor when assembling the structure to the legs.
- On another cardboard surface, place the wood frame with its counter upside down (the counter side facing the cardboard) and using the screwdriver, remove the 8 screws from the wood frame (4 on each side).
- Place the assembled metal frame and legs on the wood frame and assemble using the screwdriver (8 screws, 4 on each side).
- Reposition the module upright.
