Product Highlights

Jelene base is a soft, elegant, anhydrous ointment vehicle presenting oleaginous and emollient properties. It is a blend of molten polyethylene and mineral oil shock-cooled to form a plasticised base with a similar consistency to petrolatum. Jelene base is commonly used for topical preparations or in place of petrolatum for preparations intended for mucosal application.

- Alternative to petrolatum
- Adheres to mucosal surfaces
- Contains polyethylene and mineral oil

Ingredients

Polyethylene, Mineral Oil
