Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in *Table 9*.

> **NOTE:** When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

Memory configurations and mixing rules

■ **Golden Rule:** Memory on every CPU socket shall be configured identically.

■ System speed is dependent on the CPU DIMM speed support. Refer to *Available 4th Gen. Intel® Xeon® Scalable CPUs, page 22* and *Available 5th Gen. Intel® Xeon® Scalable CPUs, page 20* for DIMM speeds.

■ For full details on supported memory configurations see the **M7 Memory Guide.**

NOTE(1): 12 DIMMs count for 1-CPU, 24 DIMMs count and for 2-CPU configurations are only allowed when all DIMMs have the same density.

- DIMM Population Rules:
  - Each channel has two memory slots (for example, channel A = slots A1 and A2). See **golden rule** above.
    - A channel can operate with one or two DIMMs installed.
    - If a channel has only one DIMM, populate slot 1 first (the blue slot).
  - When both CPUs are installed, populate the memory slots of each CPU identically. Fill the blue slots (slot 1) in the memory channels first according to the recommended DIMM populations in *Table 12*.0, *Table 12*.1 and *Table 12.2.*

Notes:

1. 96GB DIMMs cannot be mixed with other DIMM capacities.
2. Only valid when DIMMs in blue and black slots are the same density.

■ DIMM Mixing Rules:

   ■ Higher rank DIMMs shall be populated on Slot 1.

   ■ Mixing different DIMM densities in the same slot across channels is not supported. All populated slots of the same color must have the same DIMM density.

   ■ Mixing DDR5-4800 and DDR5-5600 memory PIDs is not allowed

   ■ Mixing X4 and X8 DIMMs is not allowed

   ■ Mixing 16Gb or 32Gb DRAM based with 24Gb DRAM based DIMMs is not allowed. Therefore, 48GB and 96GB cannot be mixed with any other memory DIMMs

   ■ Mixing 16Gb or 24Gb DRAM based with 32Gb DRAM based DIMMs is not allowed. Therefore, 128GB 2Rx4 (32Gb) cannot be mixed with any other memory DIMMs

   ■ 48GB supports 1 DIMM Per Channel (1DPC) only

   ■ The DIMM mixing rules matrix is described in the *Table 13* and *Table 14*, below

128GB	4Rx4	No	No	No	Yes[1]	No
128GB(32Gb)	2Rx4	No	No	No	No	Yes[1]

Notes:

1. For 2,4,6, 8 DIMMs count, only populate slot 1 (Blue slot). see *Table 12*.0 for details
2. When mixing two different DIMM densities, all 8 channels per CPU must be populated. Use of fewer than 8 channels (16 slots per CPU) is not supported.

Table 14 Supported DIMM mixing and population across 2 slots in each channel - 48GB and 96GB DIMMs

Channel Mixing		DIMM Slot 2 (Black)	
DIMM Slot 1 (Blue)		48GB	96GB

48GB	1Rx4	No	No

Table 14 Supported DIMM mixing and population across 2 slots in each channel - 48GB and 96GB DIMMs

96GB	2Rx4	No	Yes[1]

Notes:

1. For 6, 8 DIMMs count, only populate slot 1 (Blue slot). see *Table 12*.2 for details

- Memory Limitations:
    - Memory on every CPU socket shall be configured identically.
    - Refer to *Table 12*.0, *Table 12*.1 and *Table 12*.2. and *Table 13* and *Table 14*, for DIMM population and DIMM mixing rules.
    - Cisco memory from previous generation servers (DDR3 and DDR4) is not supported with the M7 servers.
- For best performance, observe the following:
    - For optimum performance, populate at least one DIMM per memory channel per CPU. When one DIMM per channel is used, it must be populated in DIMM slot 1 (blue slot farthest away from the CPU) of a given channel.
    - The maximum 2 DPC speed is 4400 MT/s, refer to *Table 15*.0 and *Table 15*.1 for the details.

UCSC-SATAIN-220M7	UCS C220 M7 SATA Interposer Board (for control of up to 8 SATA-only drives using AHCI) ■ The default configuration is Advanced Host Control Interface (AHCI), which supports SATA-only drives. A maximum of 8 SATA drives are supported with AHCI and this configuration requires a SATA interposer board, which plugs directly into the drive backplane. The SATA Interposer supports drives in slots 1-8. ■ AHCI is limited to Windows and Linux operating systems only.

Accessories/spare included with drive controller (**For UCSC-C220-M7S**):

- UCSC-RDBKT-22XM7 is included with the selection of UCSC-SAS-T-D drive controller.

- CBL-SAS-C220M7, CBL-SCAP-C220-D, UCS-SCAP-D and UCSC-RDBKT-22XM7 are included with the selection of UCSC-RAID-T-D drive controller

- CBL-SAS-Y-C220M7, CBL-SCAP-C220-D, UCS-SCAP-D and UCSC-HPBKT-22XM7 are included with the selection of UCSC-RAID-HP drive controller.

- CBL-SAS-Y-C220M7 and UCSC-HPBKT-22XM7 are included with the selection of UCSC-RAID-M1L16 drive controller.

- CBL-SAS-Y-C220M7, and UCSC-HPBKT-22XM7 are included with the selection of UCSC-HBA-M1L16 drive controller.

NOTE: If you are adding drive controller later as spare, you may need to order cables/supercap/super cables and controllers bracket with it.

Notes:

1. Only Supported with 5th Gen CPUs
2. When ordering this Tri-mode RAID controller, please note that mixing SAS/SATA and NVMe drives in a single RAID volume is not supported. Virtual drives can only be created with drives of the same type
3. U.3 NVMe drives selected with this Tri-mode RAID controller will be set to RAID attached as the factory default. The U.3 drives in slots 1-4 can however operate in U.2 mode, directly attached to the CPU. This mode can be changed from the Cisco IMC if desired.

Select one of the RAID Configuration option from the following *Table 17*.

CAUTION: All RAID options require drives of same sector size and media type. The smallest drive capacity will be used to calculate the RAID volume size.

- UCSC-C220 M7S (10-drive SAS/SATA/NVMe backplane and optionally 4 of those can be direct-attach NVMe)
- UCSC-C220-M7N (10-drive direct-attach NVMe only)
- There is no RAID support for direct-attach NVMe drives.

STEP 6   SELECT DRIVES (OPTIONAL)

The standard disk drive features are:

■ 2.5-inch small form factor

■ Hot-pluggable

■ Drives come mounted in sleds

Select Drives

■ The available NVMe SSDs drives for **UCSC-C220-M7N** and **UCSC-C220-M7S** are listed in *Table 18*

■ The available SAS/SATA SSDs and HDDs drives for **UCSC-C220-M7S** listed *Table 19*

> **CAUTION:** Cisco uses solid state drives (SSDs) from a number of vendors. All solid state drives (SSDs) are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives (SSDs) that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.

Accessories/spare included with drives (**For UCSC-C220-M7S**):

- CBL-SATA-C220-D is included with the selection of the SATA drives.

- UCSC-BBLKD-M7 is included for the not selected front storage device.

NOTE: If you are adding drive later as spare, you may need to order cables with it.

Caveats

- With the UCSC-C220-M7S:

    - You can choose only SATA HDDs when using AHCI with a SATA Interposer. The drives must be installed in slots 1-8.

    - Unless tri-mode controller is selected, U.3 NVMe drives are connected directly to CPU2 and not managed by any drive controller.

    - If you order any direct-attach NVMe SFF drives, you must also order two CPUs.

    - You can mix HDDs and SSDs as long as you keep all HDDs in their own RAID volume and all SSDs in their own RAID volume.

    - SED drives can be mixed with the non-SED drives in *Table 19 on page 39*.

- SFF NVMe drives are bootable in UEFI mode only.

Notes:

1. HHHL = half-height, half-length; FHHL = full-height, half-length; SS = single-slot; DS = double-slot. SFF = small form factor.
2. For installation in the mLOM slot, you can order either an mLOM VIC, or the OCP NIC - but not both. If ordering the OCP NIC, the OCP Mechanical Kit (UCSC-OCP3-KIT) must also be installed in order to mount OCP NIC in the mLOM slot.
3. When present, the recommended Fan Speed Control policy setting is balanced.
4. NICs with 16 active electrical lanes, such as the 100G NICs, can be inserted in slots with 8 active electrical lanes.The NIC will function but may exhibit degraded performance.
5. This Virtual Interface Cards incorporate VIC Secure Boot technology

Approved Configurations

(1) 1-CPU Systems

■ You can select up to two of the PCIe option cards listed in *Table 20* to be installed in Riser 1 and Riser 2. Riser 1 and Riser 2 is controlled by CPU 1. Risers 3 cannot installed in a 1-CPU system.

(2) 2-CPU Systems

■ You can select up to two of the PCIe option cards listed in *Table 20* for a two-riser system and up to three of the PCIe option cards for a three-riser system. Risers 1 and 2 are controlled by CPU and riser 3 is controlled by CPU 2.

Caveats

■ For 1-CPU systems:

— Half Height Riser 1 and Riser 2 is supported. Full Height Riser 1 is supported

— Only a single plug-in PCIe VIC card is supported and must be installed in Riser 1. However, in addition to the one PCIe VIC card, you can also choose to install an mLOM/OCP 3.0 card in the mLOM slot at the rear of the chassis.

■ For 2-CPU systems:

— All risers (Risers 1, 2, and 3) are supported

— Two plug-in PCIe VIC cards can be installed in 2-CPU systems. VICs can be placed in Riser 1 or 3 only for 1U in half height riser combination. For full height riser, you can use either Riser 1 or 2 for the VICs. In addition, you can order an mLOM/OCP 3.0 card, which is installed in the mLOM/OCP 3.0 slot at the rear of the chassis and thus have three VIC cards in operation at the same time. See *Table 20 on page 42* for the selection of plug-in and mLOM VIC cards. See also *Figure 7 on page 64* for the mLOM VIC card slot.

■ To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C220 M7 server, but are not sold on the Cisco pricelist, check the Hardware Compatibility List at this URL:

http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html

■ For installation in the mLOM slot, you can order either an mLOM VIC, or the OCP NIC - but not both. If ordering the OCP NIC, the OCP Mechanical Kit (UCSC-OCP3-KIT) must also be installed in order to mount OCP NIC in the mLOM slot.

ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES

■ At the time of first launch, the 3rd Party Ethernet adapters were tested for interoperability with an initial selection of Optical Modules and Cables. Please check the Product Briefs for this initial list of interoperable optics and cables at

Notes:

1. Refer to installation guide for the more details.

NOTE:

■ All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM

■ GPUs cannot be mixed.

STEP 9 ORDER POWER SUPPLY (REQUIRED)

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M7 C-series servers. Each power supply is certified for high-efficiency operation and offers multiple power output options. This allows users to "right-size" based on server configuration, which improves power efficiency, lowers overall energy costs and avoids stranded capacity in the data center.

Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

> **WARNING:**
>
> ■ Starting 1st January 2024, only Titanium rated PSUs are allowed to be shipped to European Union (EU), European Economic Area (EEA), United Kingdom (UK), Switzerland and other countries that adopted Lot 9 Regulation.
>
> ■ DC PSUs are not impacted by Lot 9 Regulation and are EU/UK Lot 9 compliant

>
> ■ In a server with two power supplies, both power supplies must be identical.
>
> ■ Refer to *Power Specifications, page 89* section for the full details on the each power supply.

STEP 10 SELECT INPUT POWER CORD(s) (REQUIRED)

Using *Table 23* and *Table 24*, select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYMPWRCORD, no power cord is shipped with the server.

NOTE: *Table 23* lists the power cords for servers that use power supplies less than 2300 W. *Table 24* lists the power cords for servers that use 2300 W power supplies. Note that the power cords for 2300 W power supplies use a C19 connector so they only fit the 2300 W power supply connector.

STEP 11 ORDER TOOL-LESS RAIL KIT (REQUIRED) AND REVERSIBLE CABLE MANAGEMENT ARM (OPTIONAL)

■ Tool-less Rail Kit:

Select a tool-less rail kit (or no rail kit) from *Table 25*.

> **NOTE:**
> ■ Cisco recommends a minimum quantity of 1 Rail Kit
> ■ If you plan to rackmount your UCS C220 M7 server, you must order a tool-less rail kit.

UCSC-RAIL-D	Ball Bearing Rail Kit for C220 & C240 M6/M7 rack servers
UCSC-RAIL-NONE-D	No rail kit option

■ Optional Reversible Cable Management Arm:

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Select an Optional Reversible Cable Management Arm from *Table 26*.

> **NOTE:** If you plan to rackmount your UCS C220 M7 server, you must order a tool-less rail kit. The same rail kits and CMAs are used for M6 and M7 servers.

For more information about the tool-less rail kit and cable management arm, check the *Cisco UCS C220 M7 Installation Guide*.

STEP 12 SELECT MANAGEMENT CONFIGURATION (OPTIONAL)

By default, the C220 M7 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

> **NOTE:**
>
> ■ There are no LOM ports on the C220 and C240 M7 servers. Servers ordered without a VIC or OCP card will ship in Dedicated network mode, unless otherwise specified by a configurable SW PID **(UCSC-CCARD-01)**
>
> ■ For full details on all the NIC mode settings, see
>
> https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M7/install/b-c220-m7-installation-guide.html

Table 27 Management Configuration Ordering Information

Product ID (PID)	PID Description
UCSC-DLOM-01-D	Dedicated Mode BIOS setting for C-Series Servers ■ To change the default NIC mode to Dedicated NIC mode, select this card. ■ In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port. ■ See *Chassis Rear View (two full-height, 3/4-length PCIe risers), page 9* for the location of the management port
UCSC-CCARD-01-D	Cisco Card Mode BIOS setting for C-Series Servers ■ To change the default NIC mode to Cisco Card Mode, select this card. ■ If Cisco card selected, a VIC or MLOM must also be included in the configuration. if OCP card is included in the configuration, a VIC card must be selected. ■ In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

In addition, the optional software PIDs listed in *Table 34 on page 57* can be ordered for setting the server to operate in various modes.

STEP 13 ORDER SECURITY DEVICES (REQUIRED)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in *Table 28*

NOTE:

■ The TPM module used in this system conforms to TPM 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.

■ TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

Table 28 Security Devices

Product ID (PID)	PID Description
UCSX-TPM-002C-D	TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified, for servers

UCSC-INT-SW02-D	C220 and C240 M7 Chassis Intrusion Switch

Notes:

1. Please note that Microsoft certification requires a TPM 2.0 for bare-metal or guest VM deployments. Opt-out of the TPM 2.0 voids the Microsoft certification

STEP 14 SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from *Table 29*.
